The trouble with some apartment buildings (i.e. mine) is that the outside wall has a metallic layer under the paint on the inside. I do receive plenty on my scanner antenna (12th floor), but I haven't checked to see if I'm only getting "line of sight" from the window to the scanner. I do have a discone, which I strapped to the balcony, but I had to take it down when they were doing work on the outside of the building. Frankly, the signals are stronger with set antenna -- I should clean the connectors on the discone and set it up again to test it.

Ron of that ilk.

Jim,

Excellent response...

With your response, I think it is proper to jump in here and say that
I sat back these last few days after making this post and endured
criticism, ridicule, and harrassment, and did so gladly.

Lest anyone hasn't gotten it yet, I yearn for intelligent discourse on
these groups, so I make these posts in an attempt to stir up debate,
and it works. Mixed in with the guys who call me a whiner and
crybaby, and dredge up past postings, we hear some real intelligent
discussion from folks such as you, and it makes for a pleasurable pass
time.

Sometimes you have to offer the illusion of a controversial position
to get the flames going so to speak... ;)

Hello,
I recently purchased a Rat Shack Pro-90 Trunk Tracker scanner and am having difficulty figuring out how to program the Orange County FD trunked frequencies. I'm kinda lost on all the fleet map stuff and whatnot. Can anyone help me out with this? Please email me at the address below if you can help. Thanks.

I just got my new Probe 5.0, and it is the bomb. This software does every thing. Datafiles, I really think,he made this software just for me .It's so personal, that I can do anything I want with my computer. Yes I'm plugging this product because I think it is a very good one. Mostly I am a neophite to this hobbie.The first time I open my scanner and saw all those circuts and wires, I thought, NO what do I think I'm getting ready to do. I followed the directions and installed the OS/535 and the end result was when my scanner went blank, and my computer took over.Yes, LIFE,LIFE.

So Jery .... Do you complain to the College that learning history or speech
has nothing to do with electronic engineering?
I dont think so!
If you want the degree you take the required classes or you dont get it.

As to the question asked by Jenny about learning every language .... that is
so lame and stupid that it dont deserve an answer!

hmmm.. I own a pro-91 I do not believe that scanner has the capability for
a CTCSS board. They do exist, but i seriously doubt one will go into a 91.

Actually William, One reason I chose to get my EE degree from Texas A&M
is that they didn't require a foreign language for the BS degree.

Interesting feature - how does it work? With all the myriad forms of
digital transmission formats currently in use, how does the scanner
decide whether to skip a particular frequency?

Note: Spam shields raised (with rotating shield frequencies). Please post responses to
this newsgroup.

I believe a company called Connect Systems makes tone boards. Sorry, I have
no contact information for them. The big question is, will it fit inside
the PRO-91, and do you know how to hook it up.

> matter what you do, eliminate the code or pass the code test, you
> will not stay on 6, 2 and 440 but will go directly to HF.

You live in a dream world!!!
6M, 2M and 70CM (what you call 440) is NOT for the no-code
person. As a Extra Class operator I work these bands daily,
along with all other bands and I work them on CW. To say
someone will not stay on 6M, 2M and 70CM and move to HF
after the pass the code test is very narrow minded of you.
But then, getting rid of the code requirement for amateur radio
is very narrow minded and only will destroy our wonderful hobby.
If anything, make the code requirement tougher. Things worthwhile
in life do not come easy...you have to work for it! But the crybabies
out there want a license but do not want to learn the code.
Fine, if you don't want to learn the code...get a CB radio.
Because without CW...it's only CB!

Walt.

5006. Bearcat 860XLT Questions

From: Michael Graham <msgraham@kcweb.net>
Message-ID: <sbo2b3ffjp114@corp.supernews.com>
Source record: 93080

Hi All,

I'm somewhat new to the Police/Fire Scanner world and I have a few questions if a few of you have time:

1. I have a Bearcat 860XLT. I live near the communication tower for my local town's police and fire, yet I don't always hear both sides of the conversation. I'm only using the standard antenna that came with the Bearcat. Would an external antenna help? Would a different scanner help?

2. Occasionally, I hear two policement say, let's go to code. Then I hear traffic that is in a high pitch unreadable conversation. I can tell they are talking, but not make out the individual words. Is there anyway around this?

3. Other than the Radio Shack guide, is there any way to find out all of the channels that my local municipalities uses for police, fire, ambulance, etc.?

Thanks very much in advance,

5 comm= 1 dispatcher

Parkway and Turnpike cars have their own dispatchers at the respective
highways HQ's

2comm=Sussex Station and (I think) Hope Station
3comm=Washington Station
4comm=Netcong Station and Totowa (Sub)Station / Totowa is also Troop "B" HQ

5comm=Somerville Station

Each Station is responsble for patroling interstate highways or portions of
the same highway another station would cover.

IHTH

Bob

It would be the ultimate one if one it had trunk traking and also choose differente log files for different depatment like choosing a name for our police, company,ect.. just like we can do with the trakstar software. Right now it goes all in the same log and that boughters me a lot beside it an oustanding software that i use on my optocome bit banger version. like you said; life, life ho ye...

Go easy body, I don't have anay interest in HF at all but i still think
now finaly that CW is abolish, why don't they change the requirement
because after they get their licenses they never goin to us it anayway. In
the the past in my country Canada to get to learn programing you required
to pass on philosophy. Frankly i still don't see the connection and you
don't need to know philosophy crap to be a good analist programer...

It must be a missunderstand becauce I'm from Montreal and i called weeks ago in plattsburg and told me that since it's new scanner we still have to waite for the software and thecable that comes with it. Beside its not logic that they discontinu a software for a new scanner especialy if its menshion on the catalogs because otherwise we call that faulse representation in order to sale a product. No not some like Radio Shack i wouldn't believe that from a big chaine of stores...

Source record: 93089

OK guys, I know it is not legal to manufacture, sell, import and even think about a scanner to listen to the new Motorola public service digital systems. I know of at least 200 units I could sell today at approx $1,000 if they were available. The public service groups are switching over to these systems faster than you know. To keep our hobby alive, there must be someone who would step up to the plate and sell something we can list to digital transmissions. Also, what about digital cell phone frequencies?????? The market is growing for a receiver/scannner. Any comments???????????????

press trunk button for 2 seconds. when numbers 1-10 flash, then enter which bank you want to store the freqs. Then program the feq. After entering last one, hit data, select E1 then (I would try) enter a preset fleet map (start with E1P1) and use search mode to listen/identify user ID for whoever you are looking for. Write down what you find then program user ID in scanlist.

If there are many cameras like this in town, close together,
it is for traffic control. Instead of using the metal in the
pavement to detect when a car is at a turn arrow, the camera
detects it and shortens the time for that signal light.
On the video screen they draw a box and when a car passes
through that box or is in it for a certain amount of time
the signal will change sooner.
If it is just a single camera on the highway its just a video
camera for a TV station or some other Orwellian agency.

5028. Re: 2.4 Gig monitoring?

Newsgroup: rec.radio.scanner
Date: 2000-03-01 00:00:00 UTC
From: "Robert H. Eisner" <rheisner@earthlink.net>
Message-ID: <38BD53A5.7B83@earthlink.net>
Source record: 92953

This discussion came up in Demember of 1998. Anyway, the Pansonic 2.4 Gigarange phone (mode KX-TG200-B) is not as secure as Panasonic claims.

I currently own one of these cordless phones and was able to monitor the handset in the 909 - 921 Mhz range when listening in Wide FM Mode. The signal from the handset cleary not digital! It appears to be an analog type signal with a very Wide Spread. It's very simular to the new 3M Drive-Thru headers which operate in the 920 - 922 Mhz range. They can only be monitored when the scanner is in Wide FM mode and even then it's a little difficult to hear. I've never been able to monitor the base unit, because my scanner only goes up to 2040 Mhz (2.04 Ghz).

BTW, I was the one that brought this topic up on the Art Bell show last night. I was the first caller of the evening at around 12:36pm PST.

The only thing this guy knows about scanners is that the "other guy" uses metalic tuning tools on delicate electronics (which could be entirely acceptable for all I know - I'm not a techie). Ever notice that when this guy questions the other guy's competence he mentions the tuning tools as a "for instance?" But it's also the ONLY "for instance" he can come up with! On the other hand, several people have proven this guy's incompetence. The best proof was when someone posted email from this guy defending himself on the issue of frying a repeater, and then this guy's random and inconsistent stories in this very news group as to what really happened! What a HOOT!

5032. Question about Winflex 1.03

Newsgroup: rec.radio.scanner
Date: 2000-03-01 00:00:00 UTC
From: Robert Barker <rbarker@austin.rr.com>
Message-ID: <udev4.3444$w81.334655@typhoon.austin.rr.com>
Source record: 92957

I am using Winflex Version 1.03 but the text is running off the right side of the page and I have to use the arrow to move the entire screen over. Is there a way I can correct this so it will all display on my 17" monitor without having to manually move it every time.

I was hoping there is a setting I can change in the program without having to reconfigure my whole computer.

Please Email me directly for answer. Thanks.

Typical restocking charges are 15-20%. 25% is a little strong but I can't say I'm surprised. I bet they get a lot of gear back in not-so-saleable condition that they have to swallow the cost on. In my experiences, the creativity in the damaged goods is almost as creative as the stories of how it -must- have got damaged in the mail.

Message-ID: <gJkv4.13$Bi6.319@reader1.interactive.net>
Source record: 92970

I have had several problemswith Grove recently They seem to be continually out of stock on common items. The last four orders I have placed with them had to be cancelled because they were backordered and told me it would be several weeks before my order was shipped. This happened four times in a row and were not exotic or hard to find items. I ordered them from HRO or CEI that same day and got them shipped right out.

Also, I called them about thier website offer to buy used radios or trade them in - thier offering prices are really terrible, in my opinion. I told them I had about seven, six-month old Relm HS200's to get rid of and they quoted me $50 each. They then explained that that would only be for the first radio, after that the price goes down until they literally pay nothing for the last few, because they would have 'so many' in stock. Even though they would certianly sell the last few for the same price as the ones they actually would have paid me for. And, if you opt for cash instead of a trade in, they take another 10% off of that, so it would be $40. $40 for a (one) radio that sells for $200? Come on guys - even the worst pawn shop is better than that, especially with that sliding scale, 'we get the last few free' policy.

It's certianly Grove's right to offer whatever they want, but I've done trade in's with numerous other vendors and this was by far the worst pricing and policy I've ever heard of. Seems far more reasonable and fair/honest just to tell the customer you only want to buy 'x' amount at the same price for each. Also asked them about several other popular, current radios just to see if they were low on the Relms, and they seemed pretty low on these also.

And finally, my nephew ordered thier car scanner holders - for $20.00 each, it arrived and was nothing more than a cup holder that they throw in a tiny, adhesive foam strip for, to 'keep from scratching your radio'. (which he did not get - called them and it arrived a week and a half later.)
We saw the exact same cup holder at Advance auto for $7.95...

I used to like Grove a lot, but I find better prices, policies and service from the other online dealers.
In fairness, they are probably one of the most technically knowledgeable retailers out there and I have friends that still enjoy doing business with them.

Note that this is just my experience & opinon - don't bother ranting and raving at me about it...

>73s, Jim (AA2QA)

I certainly agree. I can see the code issue from both sides now. I was an active HF cw'er from the late '60s through the early '80s when I let my Advanced ticket lapse. Just 3 weeks ago, I went in and retested, passing my 5wpm and my Novice, Tech and General tests. I did have to drill for 10 days on code, review some of the newer RF regs, and read up a bit on packet, which was after my time, but otherwise didn't have to study because I already had a good grounding in the subjects. Now I'm trying to get my code up to 13 in time to take the 1B test before April 15th and get a "code" General - just for old times' sake. If I don't make it in time, I'll be one of these "welfare" Generals everyone is complaining about. I'll still get my code back up to my old speeds before much longer and it won't matter very much to me that I didn't have to pass the 13wpm test to get back on the HF bands. I'll let my fist speak for me <g>.

As long as I can remember, the older hams have been complaining that the newer generation weren't real hams for one reason or other. When I started out, older guys used to complain that you weren't a REAL ham unless you homebrewed everything from rigs to antennas (and I'm not talking Heathkits here). My original Elmer (an older neighbor who helped me build my first rig) thought I was selling out when I bought my TS-520s. Just an appliance operator - no better than a CB'er. Later, when I switched over to an iambic keyer (my Elmer gave me an old navy straight key when I passed my Novice test) I heard the old guys complain that you weren't a REAL ham if you didn't use a straight key. Still later, when they went to multiple-choice questions on the code test, I again heard the old guys complain that it had gotten too easy.

To get a CB "license" (there actually isn't any CB license anymore) you have to buy a CB radio.

To get an Amateur license that includes HF privileges today (at least a Tech Plus), you have pass a test showing that you know FCC rules, standard operating procedures, radio wave propogation theory, electrical principles, radio circuit components, practical circuits, antenna and feedline theory, RF safety, and, Oh Yes, CW. To upgrade to General - the first really usable grade on HF - you have to show more comprehensive knowledge in all of these subjects and more, and, Oh Yes, faster CW.

So now we've removed the higher CW requirement - but we've still kept the requirements for the rest of the body of knowledge. This will NOT turn HF into CB - any CB'ers who want to come over must still pass the same tests the rest of us do, less only the 13 or 20wpm CW tests. To get to the post-restructuring General requires that you at least learn CW (albeit at a slower speed) and also know the same written material that has always been required. Hysteria aside, this isn't really all that much of a change.

Anyway, listening to the all-too-prevalent lids and idiots I hear on HF these days (particularly on 20 meters lately - where you need at least 13wpm to operate), I don't see how a bunch of CB'ers can be all that much worse <grin>.

That's their first generation of 'GigaRange' phones. The second generation
(KX-T25### series) models do seem to be fully digital/spread spectrum.

> BTW, I was the one that brought this topic up on the Art Bell show last
> night. I was the first caller of the evening at around 12:36pm PST.

You weren't the dork who claimed to be a USBP agent down in Texas who
is hearing Chinese comms in the 920MHz range, and then made snoring sounds
as Art & his guest talked about it, were you? ;)

It was quite moronic for Art to kinda tie-in cordless phones & 'Echelon,'
when anyone with a brain would realize that it's easy to 'defeat' a "secure" digital

cordless phone by simply tapping at the phone wires or telco switch.

Sorry... this is my last question (sorry again) Do you know if the AOR3000A have a discriminator output? or Where Can I found information about discriminator output of my scanner? I was searching information in AOR Web site but I couldn't find information about this. If my scanner don't have discriminator output I will make a circuit to enter the signal thought the serial port, but If I can do the same without this circuit with my soundcard will be better and easy.

Thanks a lot,

Pifu.

RICHARD BEAUCHAMP <RBEAUCHAMP@SYMPATICO.CA> escribi&#65533; en el mensaje de noticias 38BC263D.E8AEC653@SYMPATICO.CA...
Ye! I have it and use it wirh my optocom with a discriminateur on my optocom
and
the sound card of the pc and have no problem with it except that i get lot
of
crap with that. if there are filters on the pocsag i don't know how to use
it
but it works...

Colin-N0VSJ a &#65533;crit :

Shit use to happen to me. I open the squelch and turn the volume down.
I then lockout all the priority freq.. Since i only need one of them,
i just programmed it into one of the 25 programmable channels.

A friend of mine would like to purchase an inexpensive used but
functional handheld scanner that IS NOT cellular blocked. I'd add to
that a requirement for a healthy battery pack and charger.
The cheaper the better. He isn't looking for a prestige rig here.

Please email me any offers.

Correct me if I am wrong but you want to filter out the PL tones? In my understanding they are already filtered out in all scanners, the only way you could be hearing them is if someone has changed the audio filtering on your scanner, other than that you should not be able to hear them.

Cheers

Len

Full coverage scanner for sale. It's way to much scanner for my needs. It's Yupiteru 7100. I have everything including box, manual, still wrapped in plastic cigarette charger, and brand new original 4 Ni-Cd. Also original earphone, and optional imitation leather cover (superb product).
I will take $ 350 + shipping or best offer

530kHz to 1650 MHz coverage, and it has 1000 channels storage. It's great for shortwave also because of the coverage,

Can sent a photo to show what is included in the package,

Ardyno

Why not? Federal law only prohibits demodulating the digital portion of a CELLULAR signal or unscrambling any ENCRYPTED transmission. Digital and encryption are NOT THE SAME. Monitoring digital is legal, just not possible with any current scanners.

Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.swap

I have a Bearcat 3000 handheld scanner for sale. Good condition. The nicad battery pack is brand new, about 2 months old. The radio is in very good condition, no scratches, well taken
care of. Everything works perfectly. Includes rubber duck antenna, instruction manual, belt clip,
original box, and coiled cigarette lighter adapter. If you want to run the radio in the house, you will
need to buy an AC adapter from Radio Shack or the like, which will run you about $10.

Covers virtually every frequency from 25 MHz to 1.3 GHz - Frequency Transfer - Auto Sorting - Auto Store - Selectable Attenuator - Auto Weather Search - Programmable modes of AM, NFM & WFM - Programmable steps of 5, 12.5, 25 & 50kHz - 400 channels - 20 banks.

Picks up CB - CORDLESS PHONES - HAM - RAILROAD - MARINE - MILITARY AIR - POLICE - FIRE - AMBULANCE - WEATHER - AIR - FM RADIO - TV AUDIO - NEWS REPORTERS - SPACE SHUTTLE - STATE ROADS - WIRELESS MICS - ETC...

$250 + $10 shipping.

I don't thing that my friend would agree with you because he keep saying it work
so go that is a great scanner. Maybe you had bad experience with a bad one...

There you have the crux of the Tandy argument: Quality by
concensus. Or in the word's of Don McLean, "Everybody loves me,
baby. What's the matter with you?"

The very fact that they resorted to this argument to bolster
their case against your complaint is tacit evidence that their
product line is for those who do not complain, and if there is a
problem, it is YOURs.

Notice that they did NOT say that the device doesn't fail, or
that their product doesn't have bugs, they specifically went to the
point that the "vast majority," of their customers were delighted.
This is an example of what Tom Peters calls in "A Passion for
Excellence:" Thinly Disguised Contempt For the Customer.

This has been a hallmark of Radio Shack service for more than
20 years.
Remember, this is the same company that puts returned defective
products back on the shelf and sells them at retail to those, "who
can't tell the difference..." (words of a RS store manager when I
witnessed a defective return going back on the shelf.)

Notice that they didn't offer to check out the scanner in
question, or admit that 'one in a million' may be defective...only
that you MUST be mistaken because the vast number of people, whom
you don't know, and have no expressed credibility in evaluating
these items, have not complained.

Take it back, and buy a decent rig from someone who appreciates
your business.

Here in Pittsburgh, we have the same thing (well, only know of one place really). I thought for a while that it was to check to see if people were speeding. Instead, it's just a glorified web-cam to give a shot traffic over the internet. Here I was slowing down 20mph everytime I went by thinking I was going to get caught!

http://www.rdrop.com/users/billmc

FCC License Data Sources
Bill McFadden
billmc@agora.rdrop.com

Changes preceeded by "|". Please e-mail corrections and additions to me.

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists. The FCC master contains a wealth of data about every non-federal-government license in the United States (over three million records). Many of the sources listed contain a subset of this data, although some contain all or nearly all of it. Federal government licenses are not administered by the FCC, and the data is not available to the public.

Also available are subscription services from companies like ISI and CET. Since they charge by the minute, they are not really practical for the hobbyist and hence are not included in this list.

Prices are rounded to the nearest dollar and include shipping, if known.

Another listing of FCC databases has been compiled by Rich Wells at:
http://www.strongsignals.net/htm/fccfrqdb.htm

----- WEB-SEARCHABLE DATABASES -----

You can search the FCC master for free from these web sites:

| https://haifoss.fcc.gov/beta/genmen/index.hts

http://www.perconcorp.com/db_srch.htm

----- DOWNLOADABLE DATABASES -----

SCANWARE ASSOCIATES

ScanWare Associates has developed a PC-based database program called the FCC Frequency Retrieval System. FCC data for all states is available, covering all services and all frequencies. However, it is not being updated frequently.

Scanware has chosen to discontinue developing this software, but the good news is that the software and data are now FREE! It is being hosted by the West Virginia Educational Network. See:
| http://ednet.wvsc.edu/~fcc

----- PURCHASABLE DATA -----

BETTY BEARCAT

The Bearcat Radio Club sells FCC data in several forms. The Betty Bearcat series of regional directories covers US public service frequencies in 8 volumes. Also available is the Betty Bearcat CD-ROM that contains public service data for the entire US and a DOS-based database search program.

Betty Bearcat directories are $17 each, and the CD-ROM is $27. They are available from The Hobby Radio Stop at 937-299-6440 (info), 800-423-1331 (orders), or http://www.bearcat1.com/scanners.htm.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major cities cost extra.) A 70-mile search costs $178. The data is provided on floppy disks and is available in ASCII columnar and comma-delimited formats.

CET does not provide data for licenses that do not contain specific geographic coordinates (i.e., mobile-only systems) or specific operating frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of the 30-mile radius. I calculated mine from a USGS topographic map I obtained at a local nautical supply store. Alternatively, you can obtain the coordinates for your town from the US Census Bureau at http://www.census.gov/cgi-bin/gazetteer/. For my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

CSP TECHNOLOGIES

CSP Technologies sells FCC data on CD-ROM. ScannerBase covers the entire US and comes with a database search program.

ScannerBase used to cost $34 but is now being sold for $4 a copy while supplies last! In addition, the newest version, Scannerbase XE, is available for free download from CSP's web site. CSP Technologies can be reached at 888-857-4240 (voice) or http://www.csp-tech.com/.

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $104, and the mapping version is $174.

Floppies are available by state for $44 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can be reached at 800-438-8155 (voice) or http://www.grove.net/.

MR. SCANNER

Mr. Scanner offers custom printouts of public service frequencies by county, or the entire FCC master for a city or town. Also available is public service data on floppy disk and a CD-ROM of all FCC data for the entire US. The floppy disks and CD-ROM come with a database search program.

County printouts are $4 each, and city printouts are $6 each. Floppies are $25 for the first state, and $10 for each additional state. The CD-ROM is $37. They are available from The Hobby Radio Stop at 937-299-6440 (info), 800-423-1331 (orders), http://www.bearcat1.com/mrscan.htm (printouts), or http://www.bearcat1.com/menu09.htm (disks).

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. Regional CDs cover subsets of the US but come with a more powerful database manager and provide more detail about each license. Also available is a Ham callsign and repeater database CD.

Spectrum costs $37, and the Ham and Repeater Database is $22. Regional CDs are $137 for the first CD, $102 each additional CD ($560 for the entire 6 CD set). Data is updated twice a year. PerCon can be reached at 716-386-6015 (voice), 716-386-6013 (fax), support@perconcorp.com, or http://www.perconcorp.com. The Spectrum database can be searched free of charge via Percon's WWW page.

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads, "Portland, City of" in the master. Police Call has been merged with its sister publication, Beyond Police Call, and now includes a limited selection of business listings.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $13 per volume.

PRO DATA

Pro Data is a database manager program for license data. It does not come with its own data but can import data from APF, Percon, ScanWare, and UFDBF database files.

Pro Data costs $60. For more information, write to prodata1@gte.net, or visit http://home1.gte.net/prodata1/index.htm.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. Standard and deluxe reports are available. Both reports include a color plot with transmitter sites marked. The deluxe report adds a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Standard reports are $29.95, and deluxe reports are $34.95. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543; call him at 630-554-3839 between 6-10 PM central time; or visit http://www.megsinet.com/~parnass.

APPENDIX

Here is table of data fields in the FCC master. Fields provided by various products are indicated by "#" or the field length, if known.

PERCON PERCON POLICE SCAN
DESCRIPTION SIZE CET GROVE SPECTRUM REGION CALL WARE CSP

They are most likely going to be on one of the Dot Frequencies. Have a look at the Frequently Asked Frequencies page on Rich Wells site:

http://www.strongsignals.net/htm/oak_faf.htm

Page down to the the Dot section. Please note that the frequencies listed on the Percon and FCC sites are generally for their Barcode Readers (not their portable radios)

I also recommend that you search the following frequencies:

VHF-high:

151.6250 151.6550 151.6850 151.7150 151.7450 151.7750 151.8050
151.8350 151.8650 151.8950 151.9250 151.9550 154.5150 154.5400
154.5700 154.6000

UHF:

457.5125 457.5250 457.5375 457.5500 457.5625 457.5750 457.5875
457.6000 457.6125 467.7375 467.7500 467.7625 467.7750 467.7875
467.8000 467.8125 467.8250 467.8375 467.8500 467.8625 467.8750
467.8875 467.9000 467.9125 467.9250

461.0125 thru 462.1875 Intersticial frequencies in this range
463.2125 thru 464.9875 Intersticial frequencies in this range

Hope this Helps

Bob

I have a AOR 8200 which I don't use much, too complicated for me. It is in perfect working order. Purchased last July from maplin so still under warranty. Has box, manual, mains adapter, and receipt.

Not sure on current value, but make me an offer.

I'm in Central Scotland if you want to have a look at it.

Cheers, Gordon

About the only thing you will 'hear" up there is all the microwave ovens in
1/4 to 1/2 mile circle around you. The 2.4Ghz phones are rare and the only 2
that I have tried to "monitor" are spreadspectrum. We had to use a spectrum
analyzer in the freeze(hold) mode to tell there was anything there. The
squelch would not break. Now the local university library has some 2.4GHz
"system to laptop" LAN traffic, while it is also spread spectrum, it hovers
closely around a center frequency and you can hear a lot of buzzing. Very
exciting.
Most of the newer 900MHz phones are farily decent spread spectruma and
difficult to intercept.
Of course microwave ovens each have their own "finger print" and I can tell
which of my neighbors is nuking their coffee.

Around 1090 you can hear the transponders on cival aircraft. Not all that
interesting, sounds like a bunch of angry bees. But it is usefull for testing
antennas, feedlines and radios.
And down at 100KHz you can find LORAN C. Not too hard to build an extration
circuit to lock a local clock to, but (at least here in the USA) it just got
a last minute reprive from shutdown, but I suspect it will be gone very
shortly. GPS is replacing a lot of older nav systems. Please do not flame me
with "how good LORAN/OMEGA what ever is/was", the sad fact is that GPS is
viewed by those in power as the only solution we need. As a GPS user I have
mixed feelings on the loss of other nav systems but they did not ask me.
Good luck and if you find anything interesting please post it to the group!

Mark,
Did you notice the new poles with solar panels on them
and some type of device pointing down at the road ?
I see the from the Greentree to Robinson Township in various areas.
I think they were installed recently.
Wonder what they might be.
Bill

Here in the USA no manufacture or retail outlet is allowed to sell any
radio device that can tune in the cellar telephone frequencies. (869 - 893
MHz). It is also illegal to listen to telephone conversations transmitted in
that frequency range. The radios we are allowed to buy here have that range
of frequencies "blocked out". If the scanner can be modified so that it can
receive those frequencies it can be "unblocked". However it is legal to
listen to the portable telephones and commercial aircraft phones.
It all seems kinda silly doesn't it?

William Lee

"Washington Whispers"

Monitoring Times® February 2000

By Fred Maia, W5YI, fmaia@texas.net

FCC to Reallocate 200-MHz of Prime Spectrum

On November 18th, the Federal Communications Commission (FCC) issued a Policy Statement concerning spectrum management handling as we enter the new millennium. The plan is to enhance competition and to encourage the development of emerging telecommunications technologies.

The electromagnetic spectrum is managed in the United States by two agencies. The National Telecommunications and Information Administration (NTIA) oversees federal government frequencies with the FCC administering all other spectrum. The NTIA also serves as the President's principal advisor on telecommunications and information policies.

Two hundred megahertz of prime VHF/UHF/Microwave spectrum -- which spans several bands from 200 to 4,660 MHz -- has been made available through the transfer of frequencies from government use and from the reallocation of frequencies used by existing nongovernment radio services.

Today, all of the radio spectrum below 300 gigahertz (GHz) is allocated for various purposes. Congress addressed the spectrum shortage issue in 1993 when the Secretary of Commerce was directed to transfer 200 megahertz of spectrum below 5 GHz, currently used by Federal agencies, to the FCC for licensing to the private sector ®to promote and encourage the use of new spectrum-based technologies in telecommunications applications.®

The law authorized the FCC to use competitive bidding (auctions) for the reassignment and licensing of spectrum for certain commercial radio-based services.
The first phase of the reallocation process was completed in 1994 when 50 MHz of federal spectrum was made available for immediate reallocation and 150 MHz for delayed reallocation. The 50 MHz designated for immediate reallocation were the 2390-2400, 2402-2417, and 4660 4685 MHz segments. The 2390-2400 and 2402-2417 segments were then reallocated to the Amateur Service on a primary basis.

Now the FCC will be reallocating the 150 MHz spectrum that was delayed. It includes the 2300-2305, 2400-2402 and 2417-2450 MHz segments which are allocated to the Amateur Service on a secondary basis.

The FCC Policy Statement serves as the framework for the reallocation. The spectrum identified for reallocation is shown in the following table.

Frequency Band Width Frequency Band Width
216-220 MHz* 4 MHz 2160-2165 MHz 5 MHz
698-746 48 2300-2305* 5
1390-1395 5 2385-2390 5
1427-1429 2 2400-2402* 2
1432-1435 3 2417-2450* 33
1670-1675 5 4635-4660 25
1710-1755 45 See Note: * 15

Note: The bands 944-960, 1390-1400, 1427-1432, 1670-1675, 2500-2690 and 3650-3700 MHz are candidates for the remaining 15 MHz of spectrum. Part of the 216-220 MHz band and the 2300-2305, 2400-2402 and 2417-2450 MHz bands are allocated to the Amateur Service on a secondary basis. Currently, the 2300-2305 and 2400-2402 MHz segments are not allocated to any service on a primary basis.

The new spectrum will be used for a broad range of emerging radio communications services which will be implemented over the next three to five years. It includes various new and expanded mobile, wireless and medical telemetry services. Most of the spectrum will be assigned by competitive bidding.

The FCC said an aggressive and innovative approach to managing spectrum is necessary and includes the following principles:

- Allow flexibility in allocations as appropriate, including rules that would allow licensees to better respond to market demand.
- Promote new spectrum efficient technologies, such as those that support ultra-wideband and spread spectrum operations.
- Ensure that important communications needs, such as public safety, are met.
- Improve the efficiency of our assignment processes through streamlining and innovative techniques, including consideration of new approaches.
- Seek out ways to make more spectrum available, for example, through refarming methods, user fees or by reclaiming existing spectrum.

The Policy Statement inventories spectrum that is available for allocation and sets forth proposals for its use. The FCC plans to:

- Expand the General Wireless Communications Service (GWCS) spectrum to 50 MHz, from the current 25 MHz, and relocate this service to the 4940-4990 MHz band at the request of the National Telecommunications and Information Agency.
- Allocate 90 MHz for Advanced Mobile and Fixed Communications Service (AMFCS) at 1710-1755 MHz, 2110-2150 MHz and 2160-2165 MHz. This will be a new flexible use service available for mobile and fixed wireless service.
- Establish a new Land Mobile Communications Service (LMCS) in 10 megahertz of spectrum at 1390-1395 MHz, 1427-1429 MHz and 1432-1435 MHz. This allocation will relieve congestion and provide opportunities for use of new, spectrum efficient technologies for business radio communications.
- Reallocate the 48 MHz at 698-766 MHz (TV channels 52-59) for Fixed, Mobile and new Broadcast services for commercial uses following the same approach

the Commission adopted recently in reallocating the 36 megahertz at 746-764 MHz and 776-794 MHz bands (TV channels 60-62 and 64-66).
• Allocate 10 MHz of additional spectrum for Fixed and Mobile service in two bands at 1670-1675 MHz, and 2385-2390 MHz and adopt appropriate service rules to permit licensees broad flexibility in the types of service and the technologies used.

As part of the Commission's efforts to effectively manage spectrum in the public interest, FCC Chairman Kennard also announced the creation of a Spectrum Policy Executive Committee. The Bureau and Office Chiefs involved in spectrum issues will participate on the Committee under the direction of Dale Hatfield (WIFO), Chief of the Office of Engineering and Technology.

The Commission said that their new allocation plans requires use of all of the frequency bands now included in the reserve of spectrum for future uses required under the 1993 Budget Act. The FCC replaced the existing spectrum reserve with a new reserve of 40 megahertz in the three frequency bands at 2300-2305 MHz, 2400-2402 MHz, and 2417-2450 MHz.

That basically means that Amateur access to these bands will not be impacted for the foreseeable future.

Action by the Commission November 18, 1999, by Policy Statement (FCC 99-354).

RV!!!! Sounds like troll sh*t. Notice the friend doesn't have a name?

5115. AR-108 switching AM/FM

Newsgroup: rec.radio.scanner
Date: 2000-03-02 00:00:00 UTC
From: Mark Davies <mark@salesdirect.cix.co.uk>
Message-ID: <89m5pcjug1@plutonium.compulink.co.uk>
Source record: 92916
Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.scanner

Does anyone know if it is possible to change the AM/FM mode on a Maycom AR-108 when it is in the airband (108-136MHz) band. If so how?

It seems it will only do AM in Airband and FM in 136-180MHz (Euro Model).

thanks
Mark.

That is hopeful information. If you find any information on this board, I would be interested. Price is not biggest concern at this point. Size could be overcome with outboard unit.

That's because airband traffic uses AM exclusively.

You are getting a lot of bad advice from people who dont know what
they are talking about. I am a lawyer. it is perfectly legal to record
public service frequencies and you can play the tape to anyone you
want to.

the recording of telephone calls is not legal.

I know what you're talking about- the cameras on top of poles (not the smaller devices on traffic lights). They're all over Houston, too.

I always assumed the rod that curves around the camera, then goes up, was for lightning protection, not an antenna.

If they are antennas, they're pretty long- about middle VHF length.

Here in Plano, Texas the small device pointing down the road is a photosensor. The sensor spots the stobe lights on approaching emergency vehicles and changes the traffic lights to give them a green signal.

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1999 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

Parts lists for recent and many older models are available on line at: http://support.tandy.com. Parts may be ordered through Tandy National Parts, telephone (800)241-8742, or through your local Radio Shack store. You may be able to obtain some technical assistance from Tandy by calling (800)843-7422, option 2. The RSU (Radio Shack Unlimited) phone number is (800)-433-2024.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004, but Robert Cummings has modified an LCD from a Miller Engineering (http://www.microstru.com) experimenter's kit and fitted it to his PRO-2004. See http://dune.globe-net.net/~rc123/Robert/Backlight.html for details.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad (PRO-43 keypad is RSU#10789808) may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

PRO-7A: Channels 1 - 4 or 5 - 8 Dead

If the first or last 4 channels in your 8 channel PRO-7A
crystal scanner are not working and the lamps for those
channels won't light, replace IC4 or IC5 (type 7400A).

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a team of G-men protect the president while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some models, like the early Uniden SportCats and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $1500 Icom R8500 and $2000 AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC895XLT, BC245XLT, SC200, and Radio Shack PRO-91 and PRO-94 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites. The ICOM IC-R2 and Yaesu VR-500 are the two smallest "pocket" scanners which perform. Both are tiny enough to fit comfortably in a shirt pocket so you can monitor without attracting undue attention.

Looking for value? At $170 discount price, the 100 channel Uniden/Bearcat BC278CLT base is a good value and available at most Sears and Best Buy stores. The Uniden Sportcat SC200 portable performs very well is an excellent value at its $220 street price.

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your

scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, http://www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance. The Premier (Prime) RD-9 and RD-9SMA are about the same length but even thinner.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas. The Austin Condor is available from Grove Enterprises.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna Co., Inc. and is designed to cover both the 2 meter

and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A (available from Amateur Electronic Supply) or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is http://www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is http://www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. Modifying any scanner to receive cellular phone signals is now considered illegal. By federal regulation, new scanner models must be designed to they cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the

Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (http://www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 7825 Black Street Rd., LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial

broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, http://www.grove-ent.com) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the

public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM. The PerCon Spectrum CDROM sells for under $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM, too.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)

dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes an extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an

invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

Other scanner mailing lists include: scanner@onelist.com, scan-l@onelist.com, scanner@qth.net, and sonofrcma@onelist.com.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about

4 PM. You must purchase a lunch since we get the room for

free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

All 1999 meetings (except August) will be held on Saturdays at Phillies Pizza, 6300S. Kingery Highway, located in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook, IL,

The 1999 meeting schedule is: April 3, June 5 (picnic at Argonne National Labs), August 7, October 2, and December 4.

The CARMA Picnic will be June 5th, 1999 at the Argonne National Labs Picnic Pavilion, Cass Avenue, south of I-55 in or around Darien or Lemont. The picnic will start whenever someone arrives. The regular meeting will be in the Pavilion at 1:00 PM. If the weather is totally frightful we also have a room inside the Laboratory building available for us.

The Picnic is BYOE (Bring your own everything) If you want to eat or drink, bring it with you, as well as your BBQ or six pack.

Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)

dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes and extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information

is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the

channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75

recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel

pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found

during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my

shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

You may be able to obtain manuals for older Midland scanners from:

Midland Consumer Radio Products
1670, North Topping,
Kansas City,
MO: 64120

Phone: 816-241-8500

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the

scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models

are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company
201 Blackford Ave.
Middlesex, NJ 08846
tel. 908-356-7787

Cal Crystal Lab Inc.
1142 N. Gilbert St.

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1999 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation sells crystals, antennas, power cords, owner's manuals ($11 ea) for some older (pre-Uniden) Bearcat scanners. Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553. You can also download an electronic copy of the user manual for recent Bearcat models from the Uniden web site:

http://www.uniden.com/docs/service/support.htm

Some schematic diagrams may be obtained from Uniden's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and

2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Matt Roberds fixed a BC220 which experienced memory loss if power was removed by resoldering the positive wire to 2-AA battery holder.

As built, the BC220 logic board is grounded only through its mounting screws. In the BC220, Matt recommends adding real wire ground jumpers from the main board to the feature (logic) board to fix grounding problems.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig and Karl Klein repaired their BC210XWs by replacing the 22uF/35V C98 capacitor.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This display is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of

a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Matt Roberds repaired the Montgomery Wards version of a BC220 and contributed these insights:

"I did add some heat-sinks, but you have to be careful what you do with the TIP29 on the logic board. I added a long, flat heatsink to it and immediately created a whine in the audio. I didn't use an insulator, as this was a temporary first-try. As far as I can tell, the heatsink was radiating noise from the logic board into the front end on the radio board, which ended up being just below the heatsink. Bypassing the TIP29 (a voltage regulator) with disc ceramics didn't work; using a smaller heatsink and an insulator fixed the problem."

"There is also a 220 ohm 1/4 watt resistor on the logic board. It feeds the TIP29 from the main +16v supply. It looked a little crispy. I pulled one end and measured the current through it and it was about 30-35 mA. This works out to right at 0.2-0.25 watt dissipation. I didn't have a higher-wattage resistor, so I substituted 2 470-ohm resistors in parallel."

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to

switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. Gary Bean reports he substituted a 2SA1298 for Q201 and it worked fine. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Sources for Replacement NiCd Battery Packs

Replacement NiCd battery packs and inserts for the BC100XLT, BC200XLT, BC2500XLT, BC3000XLT, and other scanners are available from Uniden. I've purchased them at lower cost from:

1. Mr. NiCd - E. H. Yost and Company, 2211-D Parview Rd., Middleton, WI 53562. tel. (608)831-3443. email ehyost@midplains.net

2. Battery-Tech Central, 2818 Southland Street SW, Cedar Rapids, IA 52404-4141. tel. (800)267-3087 or (319)364-0855. email rlassoc@inav.net

Batteries Plus has stores across they country and some have rebuilt Uniden NiCd packs for under $20.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal
fundamental frequency. Merely supply International with
the exact receiver model number, printed on the rear label,
and the frequency you want to monitor. They will perform
the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second
local oscillator crystal is 11.155 MHz regardless of band.
On VHF high band (148 - 175 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700
series, one for each local oscillator. The crystal
formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the
first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X
SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel

Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications
Corp. sells used Plectron receivers, in working condition,
for $75-100. If you require crystals or reeds, TCS may be
able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like"
signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

SCANNER RADIO REVIEW BRIEFS

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Jan 1996 - Plectron & Motorola Alert Monitors
Feb 1996 - Radio Shack PRO-2042
Mar 1996 - Tips for Fixing Bearcat Scanners
May 1996 - Compendium of Scanner IFs
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Aug 1996 - BMI Nitelogger II tape recorder activator
Sep 1996 - PRO-2022 modifications
PRO-2042 baseband audio tap
Oct 1996 - Radio Shack PRO-2046 mobile
Nov 1996 - Build a wooden mobile radio mount
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jun 1997 - Innovative Scanner Patents of the 1970s
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan
Dec 1997 - Uniden/Bearcat BC895XLT Trunktracker
Jan 1998 - Test Equipment Bargains
Feb 1998 - Innovative Scanner Patents of the 1980s and Beyond
Mar 1998 - RELM MS-200 mobile
Apr 1998 - RCA RP-6150 portable
May 1998 - Radio Shack PRO-2050 base Trunktracker
Jun 1998 - Opto DC442 CTCSS/DCS/DTMF display
Jul 1998 - Stub and Par Electronics intermod rejection filters
Aug 1998 - Sony SC1PC portable
Sep 1998 - Orange Book of Scanner Repair
Tone Out Testing (2-tone generators)
Monitoring ACSB (amplitude compandored side band)

Oct 1998 - AOR AR8200 portable
Nov 1998 - Alinco DJ-X10T portable
Dec 1998 - Radio Shack PRO-91 portable Trunktracker
Jan 1999 - AOR AR7000
Feb 1999 - Radio Shack PRO-2066 mobile Trunktracker
Mar 1999 - ICOM RS-8500 software for controlling the IC-R8500
Apr 1999 - ICOM IC-R2 portable scanner
Jun 1999 - Mini-Circuits ZFSC-4-1 4-way passive splitter
Jul 1999 - Racing Electronics RE2000 portable
Aug 1999 - AOR AR16 portable
Sep 1999 - Uniden Bearcat BC245XLT portable
Oct 1999 - Plectron R700 series monitor receivers
Nov 1999 - Uniden Bearcat BC278CLT clock radio scanner
Dec 1999 - Uniden Bearcat BC248CLT clock radio scanner
Jan 2000 - Radio Shack PRO-92 portable scanner
Jan 2000 - Stridsberg Engineering FLT201A FM Notch Filter and MCA-204 Receiver Multicoupler
Feb 2000 - Yaesu VR-500 portable wide coverage receiver
Mar 2000 - Uniden Sportcat SC-200 portable scanner

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

ALINCO

DJ-X10T: 1998 vintage. Rugged construction - metal back. Multimode frequency coverage 0.1 to 2000 MHz (minus cellular bands). 20 selectable step sizes from 0.05 to 500 kHz. Knob atop the radio clicks when rotated and serves as a VFO knob, channel selector, and menu navigation control. Several battery pack options for NiCd and alkaline battery cases. Furnished with an EBP-37N 4.8 V, 700 mAH NiCd pack and a sturdy 11 hour drop in charging stand. Loaded with firmware features and complicated to use. Two VFOs and 1200 channels in 30 banks of 40 channels each. Memory banks are cryptically designated, though you can scan combinations of banks. Each memory channel can be programmed with the frequency, an 8 character label, attenuator, a skip (lockout) flag, and mode (WFM, NFM, AM, USB, LSB, CW, AUTO). Very slow 6 ch/sec scan rate. Rescan delay is about 1 second and cannot be disabled or changed. Auto Memory Write stores up to 40 frequencies but does not check for dupes. 20 linkable search banks with labels. Up to 50 frequencies per search bank can be locked out. Digital clock with on/off timer. Battery saver can be disabled. Ability to scan or search for signals above a selectable threshold or channels with a specific mode. Band scope 7 or 40 steps wide. In short, 30 - 1000 MHz sensitivity is good, few

birdies and little intermod. WFM broadcast reception very good. The DJ-X10T squelch can be set to one of 10 levels. We had to keep the squelch set to SQ3 or higher, otherwise it opens at inappropriate times, especially when the battery saver is active. The DJ-X10T instruction manual does not specify the IF (intermediate frequency) scheme. Filters inside the DJ-X10T imply 0.455, 10.7, and 45 MHz IFs. Our tests indicate a first IF of 736.25 or 275.45 MHz, depending on the frequency to which the DJ-X10T is tuned. Our DJ-X10T hears images of cellular phone signals clearly in the 1419.9 - 1444.9 MHz range, 550.9 MHz above their actual frequency. For a full review, including technical test results, see Monitoring Times, November 1998.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

AR8200: 1998 vintage. S/N 550004 tested. Portable, high end "super" scanner covers 0.1 - 2040 MHz (minus cellular in USA version). Not a scanner for beginners. Many of the settings are made through the use of menus. Lots of features. 4 AA batteries, steel belt clip, plug-in AM

antenna. 1,000 conventional channels in 20 banks, 10 temporary channels, one priority channel. Each memory channel may be programmed with frequency, label, mode, step, step-adjust, offset, attenuator enable, noise limiter, AFC, and write protect. Multi bank scanning. You can enable a 0 - 9 second rescan delay with each scan group, but not per channel. 40 pairs of search limits with labels. Offset capability for monitoring repeater input frequency. LCD display easy to read. Display and keypad backlit using green LEDs. The band scope. Shortwave reception stone deaf on shortwave when fitted with the supplied antenna or a 19" whip. Seriously overloaded on shortwave by a 132 foot long dipole unless we use the built-in attenuator. Supplied "dorsal fin" antenna for AM BCB. Scans slowly (14 channels/s). Requires more current. Audio quality is slightly above other portable scanners. Computer port. One slot for a single plug-in option: voice inversion descrambler, CTCSS search, 256 frequency tone eliminator, voice recorder and playback, or extended (slow) memory. See AOR AR8200 review by Bob Parnass,in Monitoring Times, October 1998, for review with quantitative test results.

ICOM

IC-R10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes.

See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto

store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service

Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in

the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very

fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique

frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base

versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked

out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken

around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range. IF frequencies are specified at 608.005 - 611.2 MHz, 48.5 MHz, and 455 kHz.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet

available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-91: 1998 vintage. Portable made by Uniden for Radio Shack. 150 channels in 5 banks. Can selectively follow conversations in 800 MHz Motorola trunked radio systems. Censors 823.975 - 823.95 and 894.0125 - 896.1 MHz covered by the BC235XLT. Powered by four individual AA alkaline or NiCd batteries. Power save feature. Program key. One priority channel/bank. One search bank. Direct search. Service search omits many police freqs (inc. 460 - 460.5 MHz). While connected to an outdoor antenna, our PRO-91 experiences intermodulation interference in the 161 MHz range from a paging transmitter on 158.1 MHz. IFs near 380.7, 10.85 and 0.450 MHz. See PRO-91 review by Bob Parnass, in Monitoring Times, December 1998, for review with quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are

provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search. No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SONY

SC1PC: 1998 vintage. Good RF and audio performance. Covers 25 - 1300 MHz, minus cellular phone. Selectable step size and mode. Computer control and downloading with software and PC cable provided. Powered by ordinary AA batteries. Provided CDROM includes both the scanner control program and the multi million record PerCon FCC license database. 10 banks ("pages" in SONY parlance) of 30 channels each. Per-

channel 2 second rescan delay. Unlike the ICOM IC-R10, you can scan any combination of memory banks. You can lock out ("skip") memory channels from scanning. The frequency stored in a skipped channel will also be skipped during searches. One priority channel checked every 5 seconds. SONY's limit search is restricted to one pair of search limits, though computer control expands this to 20 linkable pairs. Band search lets you search through 17 bands programmed at the factory. Service search. A cache, termed Intelligent Memory, stores the last 10 unique frequencies that were active for longer than 5 seconds each. IFs (in MHz) are 600 (below 370 MHz), 232.5 (above 370 MHz), 45.0, and 0.455. See "The SONY SC1PC," by Bob Parnass, AJ9S, in Monitoring Times, August 1998, for a review which includes quantitative test results.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are

unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X		no	
FR105	6	X		no	
FR2512	24	X		no	
FR2513	24	X		no	
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes
FR2526	10	X	X	yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit

diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes and extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including IBM's server:

5146. 800 MHz Antenna recommendation?

Newsgroup: rec.radio.scanner
Date: 2000-03-03 00:00:00 UTC
From: scasko@aol.com
Message-ID: <20000302222842.02766.00002849@ng-ft1.aol.com>
Source record: 92844

In the near future I will be able to put up an 800 MHz antenna outside. I expect this will do much better then my current duckie. Anybody have a recommendation for a good 800 MHz antenna? Most of the ones I see are for mobile mounting, having a hard time finding some that can be mounted on a mast.

Also could use some coax recommendations for about a 20 - 30 foot run into the house. Was planning to use some RG-6 if the losses wouldn't be too great at that distance.

Thank you

Federal law prohibits sharing what you hear on even public service
frequencies. Maybe not intuitive but true.

I've never heard of a real lawyer who would make a definite public statement like that without all kinds of disclaimers.

I've heard of very few real lawyers who cannot read the plain language of a statute and understand what conduct is prohibited.

47 USCA 705 is quite clear about disclosure of virtually any two-way radio communication to any third party - it is prohibited. (Various sections of Title 18 USC convey the same prohibitions.)

My conclusion: You are not a lawyer, nor do you play one on TV.

Brand new handheld 1200 channel scanner from the UK. Full coverage from
.5-2GHZ with no gaps.

Comes with all original UK accessories:

Scanner (built-in al metal case)
rechargeable battery pack
"AA" battery holder pack
manual, antenna, belt clip, original packaging and box.
Plus a brand new USA Alinco adapter-charger in the box, and new Alinco carrying
case.

$450 shipped within USA.

POSSUM,

Your blanket statement about the law is equally incorrect. As one example, the Communcations Act exempts amateur communications from the prohibition on disclosure. You can legally record and play back hams for anyone you like.

Since you offered the good advice about researching communications law, why don't you do us all a favor. Take your own advice, check out the law, and report back here with an accurate statement of legality. And, please, turn down the volume on the belligerence.

Good listening,
Charley_Harp@alum.calberkeley.org

Sorry there was no mention of recording 'ham'. You need to learn to
read the posts correctly.

From: "Eric F. Richards" <efricha@dimensional.com>
Message-ID: <ttovbsght7hvqrar621rjnfa06euj0cir0@4ax.com>
Source record: 92863

Greetings, all...

What's the status on the Popular Communications web site?
looks like they lost their address http://www.popcomm.com.
They also used to have the address www.popularcommunications.com
but that one has been gone a while. Do they have a new name
or did they forget to pay their fees for the domain name?

Thanks for any info,

Eric

Radio Shack has a couple of mast mounted scanner antennas that would probably
do very well at 800 MHz.

In a previous article, <scasko@aol.com> writes:
>
> In the near future I will be able to put up an 800 MHz antenna outside. I
>expect this will do much better then my current duckie. Anybody have a

Pre-Uniden Electra Bearcat Crystals have a 10.8 MHz I.F. instead of 10.7
MHz.

Easiest way to identify early Bearcat rocks is to note the 'Tedford' or
'CTS' or 'JK' mark
on the side of the crystal can. A fair number of these also had a generic
A-135 imprinted
on them as well.

Good Luck!

> has any experience with this radio.

George

I have one of these and for the most part like it. My area has the EDACS
trunked
system so my selection of scanners was narrow. I've read one persons post
that said
it has poor audio, however mine seems just fine in that area. I generaly
have 2 problems
with the radio. 1 you cant scan regular and trunked at the same time, for me
this isnt
much of a problem cause there just isnt much else going on in the non
trunked area.
There are others vhf freqs. that are active but these are simulcast on the
trunked side
so like I said for me its not much of a problem, for you it might be
different. 2. The
front end of the radio is a little on the weak side, Ive got 3 towers for
tunked radio in this
county and 2 out of the 3 I get pretty good but the third one I dont get
that great and its
not that far from me, so I'll have to put up an outside antenna. I'm using a
3db cell antenna
now. So they could have put a little better front end in it. Overall I'll
give it a thumbs up
though, I like it.

Jeff

I just KNOW I saw someone makes a thin leather case for the credit card sized HTs. I have the Alinco DJC5. The case I saw keeps the darn thing so it will not slip out when you bend over. It was leather, cut to the shape and size of a shirt pocket and had a place to slip in the HT and maybe even antenna beside it or pen/pencil.

I can't find the ad or new product feature in any of my last year's magazines or the web. Anyone know who makes this beastie and how to get one???

Thanks!
Chris

5190. RadioMaster2000 - TS570 Control Software

Newsgroup: rec.radio.scanner
Date: 2000-03-03 00:00:00 UTC
From: Danny Butler <dannybutler@one.net.au>
Message-ID: <38befdb7@pink.one.net.au>
Source record: 92936

If you own a Kenwood TS570 or a similar Kenwood radio, and you would like to control it using a PC, have a look at RadioMaster2000, and see why many people are saying it is better than the Kenwood RCP software.

Here are the features;

- Frequency operation covering from 0 KHz to 999,999.999 KHz
- All Modes including the Reverse functions for CW and FSK
- All Tones as per the TS570 operation
- Main fine tuning with 10 Hz steps
- Selectable coarse tuning with steps of 100 Hz, 1 KHz, 5 KHz, 10 Khz, 0.5 MHz and 1 MHz. (Additional steps can be provided, depending upon the demand)
- Tuning knob with Fine and Coarse Tuning. The Fine tuning provides approx. 1.2 Khz per revolution and the Coarse tuning at approx. 8.5 Khz per revolution.
- Standard Memory switching, as appearing in the Radio
- Band switching is provided by way of an additional screen. User definable with 50 selectable frequencies and Mode
- Manual entry of a frequency is provided
- Quick Memo operation using 5 Memories
- Flock operation
- Frequency Scanning operation. 50 user definable ranges are available, that include the Mode, Frequency Step and Pause time. Includes a description of each range
- NR1/2 Noise reduction operation
- BC Beat Cancel
- 300 memories are available where the first 100 are used for downloading and uploading the Radio's memories. All memories have Split operation as well as Mode, Tone and Description. Memory scanning is available based on a code against each memory, and/or by limiting the memory locations to be scanned. Additional functions include; current VFO to current memory location, and current memory location to VFO A/B. The Radio memory locations can be transferred to the program and vice versa, modified, and then re-loaded back to the Radio - Standard VFO A/B/Memory selection, with A=B, B=A and current memory displayed transferred to VFO A
- Split Frequency Operation with TF-Set
- RIT/XIT operation with the appropriate frequency display
- Volume, RF, DSP High and Low, and IF Shift front panel controls. IF - shift displays the frequency
- CW Auto tune function
- Filter display, showing the setting, depending upon the mode in operation
- Power, Microphone Gain, Keyer Speed And Delay, VOX Gain, and Squelch

Level are adjustable using a slider control on a separate function screen
- Antenna selection, AGC, Tone and the Channel selections are also available from the same separate function screen
- Power Switch, Attenuator, Pre-Amplifier, VOX, Speech Processor, Send Function and Antenna Tuner are all operational
- S Meter function
- Local as well as GMT, Date and Time is displayed on the front panel
- Not necessary to have the Radio connected, in order to have the basic set-up functions available, e.g. Scanning, Band and Memories
- Logging Function that allows Local and GMT Date and Time recording. The Frequency and Mode can also be transferred from the current VFO. The Call Sign and Description can also be recorded. This is an unlimited database with sorting available on each column
- Communication speeds from 110 Baud to 256 Kbaud (57,600 Baud is the max for the TS570)
- Up to 16 Com Port Selections

Program has been fully tested, and runs under Windows 95, 98 and NT

This program was written based on the Kenwood TS 570, but it will work on other Kenwood models...

If you would like to download it, you can find it at my home page address below;

5191. PRO-2052 Trunking & Mil-Air - Anyone Have one?

Newsgroup: rec.radio.scanner
Date: 2000-03-03 00:00:00 UTC
From: av8tor@flash.net
Message-ID: <WVDv4.13005$Kz3.370569@news.flash.net>
Source record: 92937

Looking for another scanner, this time I want one with Mil-Air and Trunking. I have the PRO-94 and love it except no Mil-Air. I have a PRO-26, 2006, and 2035 and love them, but No Trunking.

I noticed RadioShack has a PRO-2052 for about $370.00 and wondering if anyone has any experience with this radio.
Thanks
George

From: harks895@my-deja.com
Message-ID: <89n3vr$g9e$1@nnrp1.deja.com>
Source record: 92938

I have a nice Pro-64 with leather case, antenna, batteries, manual, and possibly (if I can find it) a cable to upload frequencies to the scanner. The scanner itself has a small knick in the Lockout Review key and a couple of minor scratches, but none affect the scanner, as it works wonderfully. I would like to get $95 + shipping for all. I think this is a very fair price. Please email me if you are interested at Harks895@yahoo.com Thank you very much.

snore....

Old news, people have been talking about this stuff for years; microwave and satellite circuit monitoring, keyword filtering, usnet grep-ing, NSFnet and Internet backbone sniffing and monitoring.

Yawn, its old news, its an open secret and has been for over 20 years.

How long ago, may I ask, was the "Puzzle Pallace" written ?

It happens, its prolly very illegal, it is a massive violation of civil rights, and no one cares. If you do not like it then contact your ellected official and bitch about it...

Other countries do it anyway, just not to as great of a scale.

AirSCAN software- for the BC895XLT and BC245XLT. AirSCAN is a very convenient package used for finding and labeling active frequencies (similar to a bandscope), counting hits in frequency ranges, saving and loading previous searches, managing your scanners banks, counting hits on your existing scanner banks A-J, and using the new "extended banks" A-Z. The extended banks come with many common frequencies and are very easy to reprogram for you own frequencies. This allows you to have up to 2380 channels availble for scanner. Full version only $15.00 US.

If you can get a Sportcat SC200 for cheaper, then go for dude!

BTW, this one IS brand nwew. It's only been used a couple of days and
the warranty card is still BLANK. I'm also paying for the shipping.

I was looking for a Scanner that could decode CTCSS & DPL, which this
one does, but it wasn't fast enough for my needs.

I also had a look at the following sites and they have the SC200
priced as follows:

Grove Enterprises is selling it for $190 ($189.95)

http://www.grove-ent.com/scn45.html

Universal Radio Inc is selling it for $200 ($199.95)

http://www.universal-radio.com/catalog/scanners/4101.html

Lentinin Communications is selling it for $200 ($199.95)

http://www.lentinicomm.com/

Just curious where you saw a Sportcat SC200 for $175? That would would
be a deal! Don't forget to add about $12 tax or $12 shipping cost.

Yeah.......RIGHT! wrote:

The FCC Web Site turned up Call Sign KXJ322 when performing a Licensee Name search for "University of Southern Maine". A quick look up of that Call Sign on the Percon site turn up the following frequencies for their Public Safety Dept:

FREQUENCY	CALLSIGN	COMPANY NAME	RS	CITY
154.1000	KXJ322	UNIVERSITY OF MAINE	PL	
154.1000	KXJ322	UNIVERSITY OF MAINE	PL	ORONO
155.1150	KXJ322	UNIVERSITY OF MAINE	PL	
155.1150	KXJ322	UNIVERSITY OF MAINE	PL	BANGOR
155.1150	KXJ322	UNIVERSITY OF MAINE	PL	EDDINGTON
155.1150	KXJ322	UNIVERSITY OF MAINE	PL	ORONO
155.1150	KXJ322	UNIVERSITY OF MAINE	PL	ORONO
158.9400	KXJ322	UNIVERSITY OF MAINE	PL	
158.9400	KXJ322	UNIVERSITY OF MAINE	PL	BANGOR
158.9400	KXJ322	UNIVERSITY OF MAINE	PL	ORONO

There was no listings for Gorham, but you may want to give these frequencies a try anyway.

This is the URL for the Percon frequency search site:

http://www.perconcorp.com/datafinder/index.html

This is the URL for the FCC frequency search site:

The best descrambler for cordless phone I have seen or used is a good
communications reciever that has good tuning resolution in SSB mode.
Works fine on voice inversion after get the hang of tuning.

Is anyone using Scancat software by Computer Aided Technologies? It looks terrific! I'm considering using this software for my IC-PCR100. All comments are requested - good or bad.

Regards,
Tom

P.S. Please let me know about other quality software programs for consideration.

So did anyone answer the original question? Such as explaining the advantages and disadvantages
of AM/ FM (narrow & wide)/ CW/ SSB ? I would be glad to, but I'm not sure if it has already been
done.

Richard,
This was earlier identified as a joke, but it sort of hit a nerve with plenty of people.
-people realized how paranoid they have become of the government regarding just
a simple thing like an unblocked scanner.

let them Get 6 meters, think about, right in the middle of the the tv band, or should i say at the bottem of the tv band. Of course digital will be taking over in the next 10 years anyway. And what about the 2 meter band, you have to deal with channel 18 on cable, can't win for loosing.

5228. Update Austin Texas New Radio System

Newsgroup: rec.radio.scanner
Date: 2000-03-04 00:00:00 UTC
From: Robert Barker <rbarker@austin.rr.com>
Message-ID: <g92w4.3924$OV.576610@typhoon.austin.rr.com>
Source record: 92808

This weeks Austin Chronicle gives an update on the continuing radio saga:
http://www.auschron.com/issues/dispatch/2000-03-03/pols_naked7.html

Original article is at:
http://www.auschron.com/issues/dispatch/1999-12-10/pols_feature3.html

Since the Chronicle first reported in December on the long and sluggish quest to secure a new public safety radio system for the city, the seven-year-old project is finally crackling with some new life.

The biggest change has been in project management -- former Austin Police Dept. officer Pete Collins is now at the project's helm, replacing Kenny Williams of APD and Danny Hobby of the city of Austin's Information Systems Dept. Williams and Hobby had been managing the project since they came up with the idea for it in 1985. Williams was reassigned in December, and Hobby is retiring from city employ after 20 years.

Unfortunately, the changes haven't done much to speed up the process. The timeline for the project's implementation has been pushed back once again, and now it looks as if the system won't be up and running before December 2001. While the technical evaluation of the two vendor proposals is complete and the financial evaluation has started -- Collins expects that this portion will be completed within the next two weeks -- a recommendation to the city still isn't expected until the end of the summer. The last timeline called for a recommendation to be made by April.

In part, the delay is a result of the buyout of the radio division of potential vendor Ericsson Inc. by Comnet, a Pittsburgh-based cell phone company. The financial evaluations can't be completed until Ericsson's new partnership is finalized. The other vendor competing for the nearly $70 million project, which seeks to create a trunked radio system not only for Austin but for all of Travis County, is Motorola CE.

Despite the delay, optimism has remained high at the radio project's new offices at the former Robert Mueller Airport. Assistant Police Chief Bruce Mills -- who was appointed by Chief Stan Knee in December to oversee all of APD's capital projects (replacing Williams, who was previously the department's sole link to the radio project) -- was all smiles when asked about his faith in the project with Collins at the helm. "He's great, just great," Mills said of Collins.

Unlike the former project managers, Collins is candid when relating both the positive and negative aspects of the project, which some say is a refreshing change from Williams and Hobby's insistence that everything was always okay. "You have to report the good with the bad," Collins said. "If something goes wrong it's not because you're incompetent, and you have to get past the

human reaction of getting defensive."

Indeed, Collins' honesty about the project's continued delays has helped quiet the concerns of local public safety officers, some of whom felt their needs were being undermined under previous management. "We're still behind the curve," said one officer. "But people are aware of it at this point, and they are reassessing their timelines. The people gathered up now are really committed to getting this thing going. It has redirected everything."

Not likely, Ferrite doesn't bend so well, and a flexible for MW
would be large enough to bend like a willow in the wind,

Mostly for MW reception, I use a whip for 2 meters. Not optimum
performance to be sure, but then my R-10 is 12hz wide in AM, so it's
not really a good MW/HF receiver,

Both units mint and working perfectly. Comes with original boxes and instructions. The active antenna also has the optional AC supply. A great combination. The radio is rated four stars for value by Radio Netherlands. It is rated three stars by "Receivers-Past and Present". It is the same size and cosmetic match for the PRO-2004 and PRO-2006 RS scanners. Makes a great looking combination on the desk or in your monitoring station..

Additional info on radio with user report and extensive tech data:

http://www.rnw.nl/realradio/dx394.html

The MFJ 1020B active antenna is very highly rated also. For in depth info on it check out this site:

http://www.mfjenterprises.com/antennas/mfj1020b.html

Here is a photo of these items:

http://members.aol.com/manytrails/pictures/394-best.jpg

Price for this combination is $225 shipped and insured to your door. No sales outside US please. Email if interested.....Thanks....Bill

OK all you Perry mason made your points. I downloaded a program a few years back that will record OX directly thru my sound card to my hard hard drive. I hooked it up and it worked great for all the action I missed while sleeping. Many hard drive crashes later (too many) I don't know if I have it backed up some where, anybody know if it is still out there?

Try these for police:
154.8
155.25
155.31
155.43
155.55
155.13
460.6 Fire
San Angelo is also licensed for a trunked system on the following freqs:
855.4625 - 860.4625
859.9375
860.9375
Try Tom Green SO on:
155.7
156.09

5246. Tuning Problem?

Newsgroup: rec.radio.scanner
Date: 2000-03-04 00:00:00 UTC
From: Mike Pierson <mwpierson@hotmail.com>
Message-ID: <89rkfg$2to$1@nntp9.atl.mindspring.net>
Source record: 92826

Hello,

My friend has a Pro-51 that scans the same freq range as my 91. We found something disturbing the other day, disturbing to me that is. He's been telling me that he can listen to signals in the 900mhz range and I didn't believe him because my newer "state-of-the-art" scanner doesn't.

So, he brought his scanner over to my house and scanned the 900mhz range and found a signal, so then I tuned my 91 to the same freq and all I got was static. Thinking that maybe it was the antenna, we switched, no difference.

Question: If I can tune to the freq that my friends listening to why wouldn't mine pick it up too?

Thanks,
Mike

Another good thing about the PRO-91 is that it's finally becoming "old" enough to where they're starting to show up on the used market now. Found one in a pawn shop for $89.99 and talked the guy down to $80.00 + tax. Not bad for a trunking scanner.

Hello,

Didn't quite know where to ask this question, but I thought I'd
take a chance here...

My girlfriend lives in a motorhome, and lately she's been having trouble
with an animal that keeps hiding underneath it. We don't know what type of
animal it is, but we'd like to get rid of it and make sure it never comes
back. There is aluminum panels that go all the way around the home, and this
animal has managed to knock down sections of it to gain access.

If you've had this problem before, and have solved it, please let me know
how you did it. Or, if you know the proper place to post this question then
don't hesitate to tell me...

Thanks!

If it's an animal that can knock down sections of aluminum, I would be
REALLY worried. Reminds me of something out of an old Tom & Jerry
cartoon. My honest opinion is that it's an animal of the human persuasion
or
your gf doesn't have a very well built home.

Do you read posts before flaming? For your benefit, he wrote:

>I was reading an owners manual in my ham radio and noticed that it can
>transmit and received on different 'modes', I also noticed my scanner can
>receive on different 'modes'.
>
>I was wondering why we have different modes, and what do they do?
>
>Thanks for your time,
>
>--David

Did you get it this time?

He did not mention the word licence, he did not say he was an amateur
radio operator and was asking a valid question in the correct group.

I do not normally bother to even reply to "flamers" as they are a
waste of good bandwidth, but this is an exception.

Many thanks to those who have offered help and advice on this subject,
it is appreciated. To those that flame, may they be forever in my
killfile.

I sympathize with you and i'm shocked because GRE had made great radio in the past and myself had a PRO-43 (1986) the first one that went up to 512mhz and now an OPTOCOM wich is an outstanding radio from GRE. Here, there is no motorola's trunking radio but there is Edac and works well. So maybe that's why my friends didn't have anay problem here.

Chuck Rowe a écrit :

The radio is seriously lacking sensitivity when compared to a pro-2006, Uniden BC895XLT etc. I took mine back to Radio Scrap for that reason. It is lightweight cheep plastic case and if you have it on a desktop and press a button the unit moves as you push the button. If I were you I would get a Uniden BC895XLT or wait till July and get the BC780XLT from uniden which comes out then! Take care.

5270. getting a pulse with new antena

Newsgroup: rec.radio.scanner
Date: 2000-03-05 00:00:00 UTC
From: Gene1024@webtv.net
Message-ID: <18027-38C2912C-8@storefull-212.iap.bryant.webtv.net>
Source record: 92694

I just mounted a channel master base scanner antenna on a 30 ft. pole, grounded, using a 50 ft. coaxial cable with a uniden BC860XLT scanner.

I am getting a form of pulse (sounds something like a neon sign flashing) on low anf high VHF. More dominant on high, and at times stronger at other times.

I have checked my other electronics, tv/radios/phone/etc. and cannot figure out where this interference is coming from. I have asked the local electonic dealers and they just shrug their shoulders.

Does anyone have any ideas what may be causing this problem?

5278. Mobile reception: RS mag-mount scanner antenna vs 2m/70cm ham antenna

Newsgroup: rec.radio.scanner
Date: 2000-03-05 00:00:00 UTC
From: toomanyradios@aol.com
Message-ID: <20000305141311.09770.00005167@nso-cg.aol.com>
Source record: 92702

Question for the group:

I have been using Radio Shack's $29.99 mag-mount for the past 10 years in my mobile. This antenna is well worth the money...it performs well and has literally been from coast-to-coast, attatched to 5 different vehicles (so far.)

Recently, though, I've been thinking about replacing the RS antenna with something that will give a little more signal...but what? Dedicated mobile scanner antennas with gain are nearly impossible to find these days. What about mobile ham antennas? Specifically, the upper-end antennas from Comet and Diamond. These are about 5 feet long and advertise around 4.5 db gain on 2m and 7db on 70cm. My thinking is that one of these antennas would offer superior performance on VHF-HI and UHF, due to it's being tuned to the adjacent ham frequencies (2m + 144-148Mhz, 70cm = 420-450Mhz.) Both Comet and Diamond also offer a 6m/2m/70cm antenna as well. Since 6m = 50-54Mhz, this would presumably offer stellar performance on 46-49Mhz as well.

What do you think? Would one of these antennas offer any noticeable increase in reception over the RS mag mount that I am currently using. If so, would it be enough to justify the $150 that a Comet or Diamond ham antenna & mount typically costs? Also, what kind of reception on 800Mhz could I expect from such an animal? Better, worse, or the same as the RS antenna?

Cross-posted to: rec.radio.scanner,alt.radio.scanner,alt.radio.scanner.uk

Hi All,

Just wondering which Portable Scanners can Decode both CTCSS & CDCSS (PL Tones and Digital PL Tones) instantly?

The only one that I'm currently aware of is the Pro92 which seems to do a pretty good job at Decoding CTCSS & CDCSS instantly, but is not very good at Trunk Tracking and is over priced. The AOR 8200 is capable of decoding CTCSS, but it's a little slow at times (takes 2 to 3 seconds). The Uniden Sportcat SC200 has a seach function for CTCSS & CDCSS, but it's even slower than the AOR 8200.

BTW, I'm aware of the DC442 Decoder from Opto, but it's a little too bulky to carry around with a Portable Scanner.

The Yaesu FT-50R transceiver decodes both CTCSS and digital toine squelch, and covers VHF-high and UHF bands as well as the Amateur 2 meter and 440 Mhz bands. Since its an older desing, it may be available new or used for relatively modest prices

The Icom R2 has a very good CTCSS decoder as does the Icom IC-Q7 transceiver which shares its basic design.

I own a Yaesu VX-1 transceiver and it can decode both CTCSS and DCS,
however, this search feature is very slow! It takes anywhere from 3
to 5 seconds to find the current tone and is not capable of decoding
both at the same time (you must change modes).

Can the FT-50R decode both CTCSS or DCS at the same time (you do not
have to change modes) and can it do it instantly (under 1 second)?

Also, can the FT-50R decode CTCSS and DCS in the VHF & UHF TV Bands?

I know that VX-1 is not capable of decoding CTCSS or DCS in both TV
Bands. This is very anonying if your monitoring the UHF T-Band.

>
> The Icom R2 has a very good CTCSS decoder as does the Icom IC-Q7

Does the Icom also decode DPL? If so, can it decode both CTCSS or
DPL at the same time and can it do it instantly?

I think I stated that in my orignial post. The AOR8200 does not decode
DPL and the CTCSS tone board is very slow. It can take anywhere from 2
to 3 seconds to decode a PL tone.

Robert,

Your post said the auction is STARTING at $175.00. We all know what
THAT menas on Ebay.

Also, Yours is USED, USED, USED. Yes, a bit NEWER then most, but USED
all the same.

If you took it out of box , turned it on for an hour, then put it
away, it is USED!

Most posters here include shipping.

Dan

Hey, I hard you on the Art Bell show! Far out. You would not have been able to hear the 2.4 Ghz part anyway even if you had a scanner that went up that high. the 2.4 Ghz part is a true Digital Spread Spectrum, unlike the 900 Mhz part which is an analog spread.

In article <38BD53A5.7B83@earthlink.net>, "Robert H. Eisner" <rheisner@earthlink.net> wrote:

I've been told that the newer models (the KX-T25### series) are fully
digital/spread spectrum and cannot be monitored on 900 Mhz either.

I am looking at ScanCat, but my jury is still out. I've had trouble getting it to sync to my BC245. Jason Webb (from this ng) and Jim the programmer (Mr. ScanCat) have been helping me to get the sucker connected so I can make a fair evaluation.

To me, it looks very powerful and flexible, my two most favorite attributes. But I've got to be able to get it to work.

I've tested for my BC245: BC245INT (decent but difficult to learn how to use); Softrol (weak overall); ScanCat (see above); and WinScan (easy for me to use and connect, but pretty archaic in controls).

Mike Pierson (mwpierson@hotmail.com) wrote:
: Hello,

: My friend has a Pro-51 that scans the same freq range as my 91. We found
: something disturbing the other day, disturbing to me that is. He's been
: telling me that he can listen to signals in the 900mhz range and I didn't
: believe him because my newer "state-of-the-art" scanner doesn't.

: So, he brought his scanner over to my house and scanned the 900mhz range and
: found a signal, so then I tuned my 91 to the same freq and all I got was
: static. Thinking that maybe it was the antenna, we switched, no difference.

: Question: If I can tune to the freq that my friends listening to why
: wouldn't mine pick it up too?

: Thanks,
: Mike

Assuming that the 91 is triple conversion, then the answer is simple:your
pro-91 received nothing because it was not really there-the 51 is double
conversion, so it is prone to image reception.
If the 91 is double conversion, then prehaps the IF is different than that
of the 51.
It would still get images but at a different frequency.

Allen,

Couple things. It sounds like the battery to me. Try running the scanner with the charger plugged in ... if it works OK, then your problem is not the charger, but the battery. These are NiCad batteries, so if you don't discharge them all the way every time, they end up with a reduced capacity and act exactly as you describe. So get yourself some new batteries (two) and make sure they are fully discharged before plugging in the charger.

That's what I like about my pro-51, it has two ports for the power supply, one that charges the batteries while powering the scanner and one that just powers scanner without affecting the batteries. A great option that they should have continued with.

They may have come out with the NiMH type batteries for the pro-90 by now .. you might look around for those instead of the NiCads.

Good luck.

In Colorado the recording of phone calls is legal and need not be divulged to the other parties, as long as the one doing the recording is part of the conversation. In other states it is legal to record conversations if you declare it is being recorded. Yet in other states simply placing a beep-tone on line is all that is necessary to imply that it is being recorded.

Being a lawyer you would know about taking depositions over the phone and having them being recorded ... all legal.

5339. replacement antenna?

Newsgroup: rec.radio.scanner
Date: 2000-03-05 00:00:00 UTC
From: Stan Olson <solso@advancenet.net>
Message-ID: <38c28650@news.advancenet.net>
Source record: 92787

I was over at my uncle's house last night and I was showing him my BC245. I had him do a weather scan on his older Uniden scanner and remarkably it picked up a station on each of the wx frequencies, which totally baffled me. I did the same thing on mine and i didn't get ANY of the stations, including the closest one in Champaign. I thought to myself "it can't be the scanner, the sensitivity on mine has to be just as good if not better as my uncle's". I took my antenna off and put his on my BC245 and my eyes lit up as I heard my scanner pulling in those WX stations just as well as his scanner. Now, my question is: I never listen to 800mhz cause we don't have any trunked stuff here.. What is a good, non-expensive replacement antenna that will pick up the 162freq's, as well as 400mhz? His antenna was about an inch taller than the stock BC245 antenna and it was coiled inside unlike the BC245's. I've look at Rich's antenna page, but I want to know what you all are using and how well it works. Additionally, if you could just hit your svc button and go to the wx frequencies and tell me how good/bad reception is on your specific antenna, that would be great. Thanks!!

Thanks to all who responded to my survey. The results were overwhelmingly positive.

Bob Kelty's Golden Gate and Sacramento Valley Government Radio Systems have been turned into fully search able and bookmarked Adobe Acrobat files. I turned the files I created over to Bob last week.

The pricing and availability are strictly up to Bob.

Bob can be reached at kelty@tcomeng.com. This e-mail address is a fax forwarding device. Bob CANNOT respond via e-mail. when sending Bob an e-mail/fax be sure to include a mailing address and phone number. Distribution via the net as attached files are not an option unless Bob wishes for me to do it for him.

For anyone in the SF Bay area I'll be at the Foothill College Electronics Flea market this coming saturday with my Laptop and will be able to Demo the files for anyone interested. Foothill College is located off of interstate 280. Take 280 to the El Monte exit. Proceed south on El Monte to Foothill College. I have a large green Dodge Ram pickup with a camper shell, there are three antennas on the roof of the cab. Bob and I usually set up in the third, fourth or fifth row from the parking lot entrance by the firehouse. Communication for our group usually takes place on 444.800 MHz simplex. Bob's call is WA6GEL. We usually pack it up at 11 am.

Could someone please pass this message on to the OneList Scan Norcal and BayScan Groups?

Thanks again

Ed Tobiasz

5345. getting a pulse with new antenna

Newsgroup: rec.radio.scanner
Date: 2000-03-05 00:00:00 UTC
From: Gene1024@webtv.net
Message-ID: <18027-38C28F01-7@storefull-212.iap.bryant.webtv.net>
Source record: 92793

I just put a channel master base scanner antenna on a 30 ft. pole, grounded, using a 50 ft. coaxial cable with a uniden BC860XLT scanner.

I am getting a form of pulse (sounds something like a neon sign flashing) on low and high VHF. More dominant on high, and at times stronger than other times.

I have checked all of my electronics, tv/radios/phone/etc., and cannot figure out where this is coming from.

Does anyone have an idea about where this is coming from?

I have asked the local electronic shops, but they just shrug their shoulders.

And just because Motorolla holds a patent on doesn't mean that writing a program to decode the data stream is illegal. What is "illegal" (in laymen's terms) is when person A uses technology that,that has been patented by person B, person B has not granted A or anyone else a license or released it to the public domain, the patent hasn't expired on the underlying technology, and does all this to either profit from the sale of such goods or that A can show that B has harmed A's interests (like lost profits). This is not easy for A to do.

What is easy for A to do is to hire lawyers who file suits against B who has to spend $$$ to show that he didn't do any of those things. Mostly though unless there is some risks of a serious commercial harm A isn't going to act.

I was considering picking one up. A radio store has 3 brand new units
(so the owner says) and they want $350.00 per unit. Is this a good deal?
Also, has anyone done the mod on this unit? Thanks for your time.

Ummm, excuse me. But, there are and have been programs out there to decode MDT messages. if you go to www.strongsignals.net and look in their software section, you'll find them. Click on their link to the 'eavesdroppers' website.

Motorola holds the copyright on their Trunking signals, also. But, there is trunker and treport out there that can help you 'visualize' what a trunked system is really doing while you're listening to it.

Has anyone actually played with a working (prototype?) radio yet? If
so, does it have the "dreaded" 5-second exit delay on trunking
systems?

Software developers, has Uniden supplied you with info to get a
program written in time for June/July (or whenever the radio is
supposed to ship)?

Thanks in advance,

Oh definately!!!

Open the watch up, remove the lithium battery. Underneath the battery
holder you should find a metal contact point for the battery. Take a
3 foot section of 10ga copper wire and solder one end to this contact.
(Be sure that you leave enough room for the battery to be put back).
Return the battery, and return the cover feeding the 3 foot wire
coming out of the back of the watch.

Now, when you put the watch on your arm, feed the wire up the sleeve
of a long sleeved shirt, then let the extra just fall into the back
area of your shirt.

To receive cell calls, pull the wind button out (if not digital). If
your watch is digital, you must switch to the world time screen. If
you do not have a world time option, I am afraid your watch is not
capable of receiving cell calls.

Another neat feature of this mod... At 12:00 noon and midnight, a
12,000 volt shock (similar to stun guns) is sent throught the 3 foot
wire to make sure you are awake.

Have fun!

lol sorry I could not resist

The problem here is that you OPENED the radio.... thus voiding any warranty. I don't know of any dealer that could/would take such an item back knowing it had been opened. BTW, the manufacturers are the ones to blame for today's return problems, not the dealers. If a dealer takes back an item that the manufacturers wont accept for return, the dealer is out the money on the return and exchange or refund. And the smaller retailers just can't afford to do that.

5385. PRO-43 OEM SPEAKER QUESTION

Newsgroup: rec.radio.scanner
Date: 2000-03-06 00:00:00 UTC
From: Sinister <togepi152@hotmail.com>
Message-ID: <8a1bt0$fd5$1@nnrp1.deja.com>
Source record: 92673

Hi Fellas,

As you all PRO-43 owners know, Radio Shack installed really crummy speakers in the early manufactured PRO-43's. These were 250mW speakers.

In the later year models, the 250mW speakers were replaced with better sounding 500mW speakers.

Here is my problem. I have a PRO-43 (manufactured Feb. 1993) and the factory installed speaker in it has the designation "3P123A - 8 ohms".

Do you guys know if it is a 500mW or the 250mW speaker?

When exactly (month/year) did Radio Shack started implementing the better 500mW speaker in the PRO-43?

Please let me know....

Thanks.

Well, excuse ME, but MDT is not trunked ! I think you are the one that is confused here. MDT stands for "Mobile Data Terminal". And yes, Motorola DOES INDEED hold the patents on it, and they are very bitchy indeed ! The software you speak of is NOT LEGAL here in the USA, so sorry about that ! Tell you what... if you think it IS legal in the USA, then just start distibuting it ! And watch Motorola take you to court in short order ! Not to mention the government ! So go right ahead.... put it up on a web site here in the USA, and I am gonna enjoy watching what happens......

5389. FS: Pro 43, 39, 64, 60 leather cases

Newsgroup: rec.radio.scanner
Date: 2000-03-06 00:00:00 UTC
From: Peabody <peabody@onramp.net>
Message-ID: <O9Ww4.16419$MD3.25583@dfw-read.news.verio.net>
Source record: 92677

For photo of these inanimate objects, see
http://rampages.onramp.net/~peabody/scancase3.htm

I have a handful, so $10 each includes postage. Fits the Pro-43, 39, 60 and 64 models. Leather with belt clip and a perfect rectangular cut out to expose both AC and charging jacks on the side of the aforementioned models. Still in the original Tandy wrapper, including silica package to remove moisture. Tandy introduced leather scanner cases in its 1997 catalog, which left the 43 and the 39 out. If you decide to get any, I'm not selling them "as is" or anything, so send it back if it's not what you had in mind and I'll return your money. Many, many happy customers with this item.

5393. Is there a good Ham HT with a good scanner too?

Newsgroup: rec.radio.scanner
Date: 2000-03-06 00:00:00 UTC
From: John Coan <jcoan@mindspring.com>
Message-ID: <38C43689.F9EEA619@mindspring.com>
Source record: 92681

I am considering the purchase of a handheld scanner, and saw another post regarding a Yaesu model ham transceiver being capable of scanning out of band frequencies for receive.

I figured then, if I am going to shell out the bucks for a receiver why not get an HT along with the deal.

So, is there anything on the market that makes a good scanner and transceives on 2 meters and/or 440? Usually, a piece of equipment can only do a few things really well. Am I right?

73,
John KE4ML

5401. (R2) SMA to BNC connector (HELP!)

Newsgroup: rec.radio.scanner
Date: 2000-03-06 00:00:00 UTC
From: Soy Bomb II <mm11720@navix.net>
Message-ID: <8a1lgk$64o$1@iac5.navix.net>
Source record: 92689

I have an R2 and a normal SMA to BNC adaptor so I can use BNC antennas. I worry about the stress that it may put on the case the antenna ever gets jerked around by my kids or something like that.

I saw a SMA to BNC adaptor somewhere that had a built on rubber boot that surrounded the adaptor so it was about the diameter of the average BNC rubber duckie, I think this would take a lot of stress off the R2 case if sideways pressure was put on the antenna.

The problem is now that I want one I can not find one anywhere. Can someone tell me who makes or distributes this SMA to BNC adaptor with the round built on rubber boot surrounding it. Thanks experts,

Bob

> Since when has that little "fact" bothered you, Cecil old boy?

You're right, Michael, I should have said, not legally except
for emergencies. I actually have never used my ham transceiver
on the CB bands. I "confessed" because I knew it would drive
Dick right up the wall. I had my emergency blinkers on and was
considering using my IC-706 on CB when a kind motorist pulled
over to see if he could help. If someone had not stopped to help
me, I probably would have tried using my IC-706 on a CB frequency
since I didn't have a CB radio with me at the time and I was
out of range of any 2m repeater.

5403. OptoScan456 Lite Pro-2006 Questions

Newsgroup: rec.radio.scanner
Date: 2000-03-06 00:00:00 UTC
From: Mr_SLUG <nospam.stalker@lvcm.com>
Message-ID: <sc8r76t5bi7139@corp.supernews.com>
Source record: 92691

I have a OptoScan 456 Lite board installed in my Pro-2006 scanner, all works GREAT, except for the following....

When I start a computer control program (I have BOTH Probe and Registered RadioMax), they take control of the scanner, but the display never blanks anymore. The scanner is indeed under computer control, because the freq files I am using are exactly what I'm hearing during the scans (Verified by my PCR-1000 Scanner on another computer)....Its weird, but there is no problems with the reception, just the display shows SCAN and rolls through the freqs in memory, stopping at various points when the computer control program locks on a freq...

Its a problem I can live with, as it still works great, but just alittle bothersome.

ALSO, Same scanner has the mod done for the PROGRAMIT interface and the discriminator output....I removed the transformer to reduce the heat inside the cabinet, and am using a external pwrsply. Nice Bright Display, do not have the original ant/box/manual, but the unit is is good shape (Id say a 8 or 8 1/2). I have 2 Registered programs for the OS456 Board (RadioMax Windozzz software, and PROBE V5.0 DOS control software). I would like to Sell/Trade this unit, but do not know what it would be worth AS IS!? Any ideas of its worth?

Any and all help would be greatly appreciated!
Scott

5404. Re: PRO-43 OEM SPEAKER QUESTION

Newsgroup: rec.radio.scanner
Date: 2000-03-06 00:00:00 UTC

>
> Please let me know....
>
> Thanks.
>
> Sent via Deja.com http://www.deja.com/
> Before you buy.

The Detailed Parts List for the Pro43 is avaialble at the following:

http://support.tandy.com/support_electronics/doc30/30401.htm

http://support.tandy.com/support_electronics/8564.htm

Your Pro43 most likely has a 300mW 8 OHM Speaker:

Tandy Part number 11083383 Speaker 8 OHM 300mW SP0228

The later Pro43 had a 500mW 8 OMH Speaker

Tandy Part number 12235875 Speaker 8 ohm 500mW SP90240

I recommend that you DON'T replace it, unless it's causing you
some major problems. I recently replaced the speaker of a Pro39
and had to take it apart and put it back together again 3 times,
because the LCD display would not seat properly. Very Painful!

Bob

If you're upgrading to extra, you already have an amateur radio license and
therefore should already be familiar with what a diode looks like and you
should already know the answer to your question. Now, go away. We already
have a bash-fest over legitimate amateur radio topics and don't need you to
stir "the already volatile pot."

Not by any stretch of the imagination. By something more modern with
a better receiver (shouldn't be hard to do) and that Uniden will still
be able to fix in a few years.

The frequencies may be licensed as business and be used by a fire department
that is owned by the business.

The Police Call CD-Roms have only been distributed and made once. So,
naturally, by the time you get them, they're somewhat outdated. Just like
when you buy a computer. What's brand new today, might be older as sin in 5
hours because a newer system has been released.

If you're looking for more current license listings, try these.

Period nothing. Opto and a few others STILL sell data slicers. Go to
http://www.optoelectronics.com/optotrakker.htm Read the advertisement. Read
the specs. Read data slicer. LOOK AT THE DISPLAY IN THE PHOTOGRAPH! They
don't supply software to decode MDT thus they are still running their
business without pending litigation. Two separate papers I read stated the
undercover cops got disks with software on them to decode MDT from Bill.
Bummer. He was being Bill helping out and got bit. Bill's legal problems
would be over or never happened if he had merely sold a data slicer. Period.

Bill

I've been on this news group for years. Didn't say much at all. My past few comments were meant for humor ONLY. Didn't want to or mean to offend ANYONE. It just gets tiresome hearing the same old question about cell mods over and over. And most are about the 245xlt and 895xlt. If people want to do that cell thing then maybe they should get a older scanner to do it. I for one had a number of scanners the did it and really didn't find it interesting one bit. But thats just my preferance. I'm not going to get on anyoe who wants to do it. But if its about a newly released unit, look back on prior msgs and they will get a answer right away. Or visit http://www.strongsignals.net/. When I started adding scanners to my ham shack that was one of the first places I went. Rich Wells could NEVER get enough praise he deserves for what he has contributed to the scanning community.

Have a great day. And again, my comments were made for HUMOR only......

5426. POCSAG (PD2.05) Update

Newsgroup: rec.radio.scanner
Date: 2000-03-07 00:00:00 UTC
From: PhilPerkins <phil@pervisell.com>
Message-ID: <38C566A7.BAA29F45@pervisell.com>
Source record: 92556

The latest version of the popular Pocsag (pagers) monitoring program,
written by Peter Baston , has just been released.

VERSION 2.05 February 2000

* Added support for parallel printer output.
* TEXTSCAN.INI can now have up to 100 strings.
* Logging of TEXTSCAN pages to separate log files.
* TEXTSCAN strings now work with space at beginning or end.
* Select logging of numeric, alpha or both via "logging" variable.
* Time stamping of received pages on screen.
* Fixed "Year 2000" bug in "expire" feature.
* Switching between two mapping tables, using control codes
(see CHINESE.LNG).

Existing registered user's key files will work OK with it - just copy
your key file into the working directory OR just overwrite your
existing version with the very latest.

Feel free to download it and try it - the main limitations in the
shareware
program are a 15 minute timeout (just run the program again) and no
logging to disk.

Free download from http://www.pervisell.com

Not to mention the cd database download program does not work. I tried to return the cd to the ratshack and the manager would not take it back because it was software and non-returnable even though the program didn't work as stated. After trying to get the support many times they finally emailed me the updated fix. Save your money and get the percon disk if you are undecided on whether to get this. It is version 1.0 and we all know what that means.

> Was the new 500mW speaker factory installed in PRO-43's manufactured
> in December 1993?

I don't know when the new speaker was used in production. All the complaints on the net appeared to come from '92 and early '93 buyers. One minor point to bear in mind - the sticker you find on the box and inside Radio Shack items is the date of import, i.e. when A&A Trading (Tandy's asian purchasing arm) received it. It is always possible that the OEM made a large production run and delivered in batches.

Hi Genno, Well ... I missed the humor in your post... sorry.
It looked more like a troll at work.

Yes .. it is a bit boring listening to cell calls and I dont do it very much
at all.
I know it seems like a never ending line of people coming here and asking
the same old questions.
But if you stop and think that is a good thing.
It means there are new scanner buffs coming online everyday and they may not
know how to use the search features on news groups very well yet.
Hey ... We need all those new users to keep the manufactures developing
better radios.

If my comments to you missed the mark then I take them all back.
You seem to enjoy this hobby and ham radio.
To each his own and that is a good thing.

William Lee N5WRX

Anyone know what cigarette lighter adapter I can get for a Pro-2006? It says on the back of the radio 13.8vDC, but can I use a standard 12vDC plug? Where can I buy a 13.8vDC adapter?

Thanks in advance!

Message-ID: <38C5BF73.4F4D4800@cvip.fresno.com>
Source record: 92572

A weather baloon with a transmitter landed on my friends property the other day.We measured the transmitter frequency to be 403.8125mhz.There are no markings on the transmitter to indicate an owner or agency.
The container does say "VAISALA Radiosonde RS80" on the box.
This frequency is below the normal 406mhz government band,but is it a satellite frequency or other govt.channel.
We would like to contact the agency/owner if possible.Anybody have any ideas about this beacon?

no im not sure. ive done a shitload of mods to my scanners,along with just about every other gadget i have,and it seems there is always a way. just like cable-them jerk offs will introduce some sure fire scrambling scheme,and its a matter of weeks before someone had figured out a work around for it. i dont have much experience with modern scanners though-i have a fairmate hp-2000,which ive owned for about 7 years and its still going strong,and a heavily modified
pro-2006.
my main gripe was the tone of whats his names post-of course its virtual anarchy on the net,but people are free to ask what they want and i see no reason to get rude about it.then to,thats his right to do so if he wants,just as its my right to tell him what a jerk off he is.
but i love a good challenge,and when i get my taxes back im gonna get me one of these supposedly unmodifiable scanners,maybe an aor or yupiteru,and see what i can do,and ill keep you guys posted.

Jesse

thats probable rich-couldnt say one way or the other in lieu of the relevent facts.
Your "no way" does,though,beg the question of what makes an otherwise identical government scanner get full coverage as opposed to consumer models,and why would it be immpossible to add/remove/modify a component(s) in the consumer model to make it fully functional?
im in construction and ive heard to many times "it cant be done" but ive found there is always a way,and to a degree,the same holds true for electronics.
im not saying your wrong-i just dont know.

From: Jon Hughett <jhughett@imaginemail.com>
Message-ID: <38C581FD.CF2E1A22@imaginemail.com>
Source record: 92579

Hello,
I have a Pro-2006 and am planning to tap the discriminator in it.
I know where the test point is and about adding the capacitor.
my question is: when I solder the shielding on the coax to the ground
do I have to solder each end of it? Sorry for such a lame question but
my experience with electronics consists of one high school class almost
two decades ago.
My gut tells me I only have to connect one end, but then, I'm a stoopit
hed.
In a rare burst of clarity, I decided to ask of those better informed
than I
before melting pools of solder. Thanks much

Jon

Source record: 92607

You could try the Yaesu VX-5R, a tri-band (6m/2m/70cm) transceiver with wide RX coverage including AM and FM broadcast, air band, CTCSS/DCS and alpha tagging. It has a backlit keypad and the battery is a fast charging lithium ion. No trunking, of course and it is a double conversion. It has two "action bands" covering the UHF and 800 bands, but VHF Hi is in the middle of the radio's 2 meter band coverage, and VHF lo is not covered. You can configure the scanning function to cover public safety in VHF hi, however.
Considering this unit's size (about 1/2 the height of a BC 245XLT) and rugged construction, it would make an excellent backup scanner. Price around $313.00.

I never said they were legal. I was just proving something to someone else
that said the programs don't exist.

Does anyone know the new group ID's for Ontario (Calif) Airport PD.
They moved from system 9 to system 6/7 a while back and the only ID I
have is 18224. I'm also not sure if the Airport Fire units moved too?

Help appreciated and will be posted at...

i wouldnt talk about sounding dumb if i was you,which thankfully im not,cause
you dont sound that bright your damn self.
modern scanners can be sold to the federal government with full coverage,and as
such there are ways to make these scanners fully functional.
even if there is no way thats no excuse for you to spout off with your stupid
opinions.
it dont hurt to ask retard-thats what newsgroups are all about.

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard!

.....

Please Welcome:

Terry Jones N9GRM <n9grm@hotmail.com>
Decatur, IL

From: Ben_Green@oes.ca.gov

To assist the State ACS Officer in operational & some
administrative duties, the Deputy State ACS Officer will begin
to assume some of the heavy burdens which have also been shared
by the Program Coordinator. In order to make State OES ACS what
it is; the nation's premier EmComm Unit; the following duties
will be assigned to Dave Larton. This action will become
effective immediately upon receipt.

The Deputy State ACS Officer will be responsible for the
day-to-day operational needs of State OES ACS. All Region ACS
Officers will report to Dave directly for any operational needs.
The Deputy State ACS Officer has been directed to establish some
goals and projects for State ACS to accomplish within a certain
time-frame. The first project is to assist in the development
of the ACS Policy & Procedures Manual and Standard Operating

Procedures; specifically, the ACS position descriptions. The ultimate goal of this project is to provide uniformity throughout all three regions of the ACS program. To help accomplish this mission, Dave will journey to Sacramento every other Monday to meet with ACS Staff and the Coordinator. Please extend all cooperation to Dave as he undertakes this responsibility.

Ben J. Green
Assistant Chief, Telecommunications

.....

Current Events:

From: Ben_Green@oes.ca.gov

The OES Auxiliary Communications Service (ACS) will host an Amateur Radio No-Code Technician License training class all-day on Friday, March 24th starting at 0800hrs followed by an FCC exam. On Saturday, March 25th, testing for all license class's will be given starting at 0800hrs. {Those wishing to re-take the No-Code given on Friday will have a second change on Saturday too!} The location is the Inland REOC at OES Headquarters, 2800 Meadowview Rd, Sacramento. Those wishing to partake in the training and/or testing please submit your interest to me directly via email.

Thank-you

This week's EMCOMM Bulletin:

EMC226 Bulletin Focus
To: Emergency Communications Units - Information Bulletin
To: Emergency Management Agencies via Internet and Radio
By: Auxiliary Communications Service (ACS) of the
California Governor's Office of Emergency Services

EMC226 Bulletin Focus For release 2/28/00

Query: Why are the Emcomm Bulletins sometimes on topics
which don't seem relevant to Emergency Communications?

Response: Emergency communications do not occur in a vacuum
unrelated to people and management. The purpose of a bulletin
may be to stimulate unit leaders to think - about an idea or
application of interpersonal relations or management - for
themselves. Such bulletins may not appear to be relevant since
it isn't readily evident to Emergency Communications as such.

Unit management help and ideas are the most consistent need as
indicated by the responses from bulletins on administration,
management, organization and plans. Therefore the bulletins
address ideas, aids, suggestions and offer encouragement in
management as well as creating, establishing and operating a
unit. They also cover aspects of the human mind since the way
that a person thinks affects everything they do, like the EOC
manager who thinks he/she doesn't need an Emcomm unit. There
are ways to reach that person, albeit it takes time.

Few management and people aspects are Emergency Communications
specific. For instance a portion of bulletin 219 read:
"when you unconditionally accept someone just the way they
are, that acceptance gives them the space to change......
..... and ..... change they will."
That's something some people don't want to hear. Others will
resist that idea until their death; while for others it will
not make any sense. Yet, it is true and when a person has the
time to think it through and actually test and apply it, the
evidence is there and convincing. That is a basic principal
that applies to Emcomm unit managers and participants as well
as to people in general. It isn't emergency communications
relevant on the surface, yet it directly affects every unit
and every person. But it takes willingness and an effort to
discover how it affects a unit and its paraticipants.

This is how we recommend the Emcomm bulletins be used.
Consider then to be primarily for COORDINATORS or MANAGERS;
meaning the paid staff of the agency and the unit volunteer
leaders. Then
(a) make sure the bulletins physically get into the hands of
those coordinators and officers.
(b) develop a process where by the coordinator and senior

officer(s) discuss bulletin content or ideas.
(c) ascertain that within unit leadership there is a real effort to test, apply or discard them, or use them to create something better in your own unit.
(d) come up with your own ideas and suggestions and send those appropriate to us for inclusion in the bulletins so many others can share in what you've learned.

It helps when you let us know of your results with any of the bulletins. Thanks for your feedback, suggestions and ideas: cary.mangum@macnexus.org or cary_mangum@oes.ca.gov
---
To subscribe to bulletins, use the Subscription Services web page at <http://acs.oes.ca.gov/subscribe.html>. If you don't have web access, just send an e-mail message to <mailto:emcomm-bulletin-sub@harthaven.com>.

Bulletins are on the ACS Web page: http://acs.oes.ca.gov -and a Landline BBS: 916-262-0856 (graphical & standard interface); and an FTP archive at: ftp.ucsd.edu/emcomm

.....

Please let others in the emergency services field know of the newsletter, and encourage them to join... If you have opinions, suggestions or written material that you'd like to share with the group, let us know. We're always looking for new ideas and suggestions that will benefit everyone.

See you next week!

The original speaker, rated 200mW, had a manufacturer's part number EAS-3P123A. The new speaker became available as a replacement part in Dec 1993. It was 500mW and marked EAS-3P127A.
You have the original but, if hasn't failed yet, I wouldn't bother replacing it. You might want to order one to keep in reserve if it's still available. Tandy originally charged $11 in Feb 94, but it was up to $18 by Oct 96.
Contrary to another post, stock# SP0228, RSU# 11083383, was the replacement speaker from Natl Parts.

I never said they "didn`t exist". I said you had better contact them
(Motorola) before writing software that codes and decodes their data stream
here in the USA, which is where the original message originated. Cheek got
busted for selling the hardware that decodes it, although it is readily
available at places like Texas Two - Way, who are still selling it to this
day ! He got busted for selling a "Data Slicer, to wit, a device primarily
intended for the interception and decoding of MDT encrypted data". This was
on the heels of their own type approval of the Optocom, which had a DATA
SLICER BUILT RIGHT INTO IT ! I doubt very seriously if Bill "profited" by
any great amount in this, since the plans to build this stuff are still, to
this day, floating around various places on the internet. Not to mention the
fact that your average packet TNC also has one in it. They (and Motorola)
have been very arbitrary about just who they go after, and I wouldn`t want
to be the one to test the waters. Obviously, you DO like to test them, and
also bring the heat down on those sites you mentioned.....

Thanks Barry, for your info.

Another question though:

Was the new 500mW speaker factory installed in PRO-43's manufactured
in December 1993?

In article <8a2i16$qu3$1@ssauraab-i-1.production.compuserve.com>,

Message-ID: <8EF05398Bscanmanscanlandorg@209.99.56.9>
Source record: 92627

<snip>

Bill Cheek was 'busted' as you say for accessing encrypted MDT messages which are a big 'No-No' under the ECPA of 1986. What is NOT illegal, however is decoding encoded data. As long as the data is not encrypted, or, 'in the clear', it is legal to intercept and decode. Same with Amateur Radio Packet transmissions, Amateur Radio SSTV transmissions, etc.....

The same will hold true if/when a Digital capable scanner hits the market. The data is only encoded into a digital carrier instead of analog. There IS a difference.

I cannot give you comparative info because I have no experience with
the RS antenna. But, I have been using a 34 inch long Comet
144MHz/450MHz/900MHz antenna on several vehicles for approximately 10
years and it performs very well electrically and is mechanically
sturdy.

The 900MHz section served very well at 800 MHz when I had an analog
cellular phone.

Not being a lover of mag-mount antennas (for transmitting) I say pay
the money and drill the holes. Good luck.

Jim

No he wasn't. Get your facts straight. He was busted for selling the
hardware that would allow such accessing and deCODING (they weren't encrypted)
of such messages.

>What is NOT illegal,
>however is decoding encoded data. As long as the data is not encrypted, or,

Good that you know this much, now just apply it to what really happened and
you have a true story! ;)

5479. FS: Pro-60

I have a nearly mint Pro-60 with leather case and NiMH battery pack.
This scanner receives straight thru from 30-512 and 760-999.9875 MHz
(cell blocked). With service manual.

$125

Thanks,
Jon

Jon,

Replacing the speaker was the easy part. I ran into a problem when
I removed the main board from the chassie. The LCD display fell out
before I could see how it was orignally seated. I had to flip the 3
components of the LCD display around several times to get it working
again. The Pro39 and Pro43 look very simular in their construction.

It's true that there are some scanner models (like the Icom R2) that can be purchased in other countries with full 800 MHz coverage, but many others (like the Uniden Bearcat BC-245XLT) are not available unblocked anywhere, and can't be (at least easily) modified.

What was that about facts? Cheek went down for supplying the software to decode MDT. He supplied when he sold the hardware to the law. The hardware didn't show a specific intent but suppling the software with the hardware was Bill's downfall. Software not hardware. Data slicers (hardware) are OK. Supply the MDT software is not. His site even warned of the possible hazards.

5490. WTB: your old handheld batt-op LED calculator!

Newsgroup: rec.radio.scanner
Date: 2000-03-07 00:00:00 UTC
From: floetay@aol.com
Message-ID: <20000307122131.02106.00000554@ng-fz1.aol.com>
Source record: 92643

Here's what I'm looking for: handheld-type battery-operated calculators, mostly the LED-type calcs from the 1970s, the ones with the reddish, blackish screens, often with glowing red numbers, as opposed to those you see most often today, with their typically grayish LCD screens (except for HPs -- love em w/ any screen!). I'm looking for all makes, all models, as long as they work and are cosmetically clean -- see partial list below. (The only calcs I don't care for are those made by Texas Instruments.) Anyway, if you've got the old manuals, cases, chargers, so much the better. Just drop me an email (floetay@aol.com) and let me know what you have and the condition it's in, and we can go from there. Thanks!

Calcs I'm interested in include, but are not limitted to those made by: Hewlett Packard (all models, both LED and LCD), Adler, American, APF, Apollo, Aries, Aristo, Berkey, Brother, Busicom, Caltronic, Candle, Citizen, Colex, Columbia, Corvus, Craig, Crown, Dataking, Decimo, Dictaphone, Digicomp, Dixon, Edmund, Enterprex, Facit, General, GIC, Hanimex, Hermes, Iain Jones, Ibico, JC Penneys, Kingspoint, Litton, Logitech, MBO, MITS, Master, Melcor, Mintron, Monroe, Omron, Ordibel, Panasonic, Pico, Pye, Ragen, RBM, Regan, RFT, Ricoh, Royal, Samsung, Sanyo, Sears, Sinclair, Spectrum, Sperry, Summit, TKS, Toshiba, Universal Data, Verax, Victor.
Good golly -- can you believe there were once about 220 brand-names in all?

Hi Jon,

There are cases where it would be important to properly ground both ends-
VHF/UHF freqs and above . This is not the case here and as long as the
length is short a single good ground point will suffice.

I brought my scanner on a recent cruise to Nassau aboard the "Big Red Boat".
I found that it was tough to receive aboard ship because of the metal
structure of the thing.
I found most activity aboard ship in the Marine Frequencies between 156 and
158 Mhz.
On the PRO-94 this was easy because of the pre-set frequencies. The others
may be right, LEAVE IT HOME!! Paul

I recently tapped the discriminator on my BC8500xlt. It picks up 800Mhz like no tomorrow. Although, the signal from distant control channels gets wiped out by more powerful frequencies near by.

I also tapped the discriminator on my PRO-240 and it doesn't pick up 800Mhz very well. I tried numerous antennas on it. But, it just won't pick up as well as the BC8500xlt in 800Mhz range.

Any ideas why not?

5513. Railroad Listeners what does it mean when the hotbox says axle count

Newsgroup: rec.radio.scanner

I have a question for railroad fans. I listen to 160.74 Union Pacific Ch 4
in Austin TX
I think I hear the milepost 168 hotbox detector..

It used to say " Milepost 168 UP Detector, Milepost out"

but now it says "Axle count 240" or something like that..

assuming every train car had 2 axles.. does that mean the train has 120
cars?

Please reply personally if you are in rec.radio.scanner since I don't check
newsgroup frequently

That sounds like what I listen to here in Cleveland, Ohio on 161.070

the local one near me says "Conrail, White, Ohio, Track (1 or 2) No Defects
ot HotBox detector not working, Total axle count 12345, Train speed xx.
Over"

White, Ohio is actually the name or the crossing where the detector box is
located. It's the Whitehouse crossing on the SE side of Cleveland, Ohio.

Right after the detector box says that, the Engineer is supposed to repeat
the information back.

It's fun to listen to.

Well, that's good news (assuming the report carries over into the
finished product). But I sure hope they are firming up that firmware
pretty soon (although I guess I wouldn't want to rush them and end up
with problems)...

The discriminator is to get behind the Filters that block out thing lower and higher than your ears/the speaker can hear/produce. and allows you to use the Signals that may be being used on those channels that are higher/(lower(not likely)) in hz than the filters allow
But to cause a RXer to get 800 mhz or any other FRQs that are not already in the RX unit doesn't seem possible..

That's NOT what I was asking about.
I was asking why it is that while using the w=same antenna with two
different radios, one picks up 800Mhz stuff better than the other one.

And, I made a typo. It's a Pro-2040. Not a Pro-240.

>Thanks,

Well, it's a bit different to program than what people are
used to today. Mine was made in 1976. I don't have an instruction
manual to send you, but I wrote a Basic program in 1979 to do the
dirty work. This program will let you set the switches correctly as
well as tell you how the formula works for programming. Basic program
follows: Cut Here.

```
10 CLS
20 DIM A(13)
30 B(3) = 0
40 PRINT "ENTER FREQUENCY IN MHZ."
50 INPUT "";F$
60 IF F$ = "" THEN GOTO 80
70 F = VAL (F$)
80 IF F < 30 THEN GOTO 320
90 IF F > 50 AND F < 146 THEN GOTO 320
100 IF F > 175 AND F < 416 THEN GOTO 320
110 IF F > 512 THEN GOTO 320
120 IF F = > 30 AND F = < 50 THEN K = 10340:FMUL = 200:B(1) = 1:B(2) = 1
130 IF F = > 146 AND F = < 175 THEN K = 36940!:FMUL = 200:B(1) = 0:B(2) = 1
140 IF F > = 416 AND F < = 512 THEN K = 40964!:FMUL = 80:B(1) = 1:B(2) = 0
150 FFMUL = F * FMUL
160 W = K - FFMUL
170 Y = 4096
180 FOR X = 1 TO 13
190 IF W - Y < 0 THEN A(X) = 0: GOTO 210
200 IF W - Y > = 0 THEN A(X) = 1:W = W - Y:W = INT (W + .001): IF W < 0 THEN GOTO 210
210 Y = Y / 2: NEXT X
220 FOR I = 0 TO H
230 NEXT I
240 FOR O = 1 TO 13
250 PRINT A(O);
260 NEXT O
270 FOR O = 1 TO 3
280 PRINT B(O);
290 NEXT O
300 PRINT
310 GOTO 50
320 PRINT "OUT OF RANGE. TRY AGAIN."
```

```
330 GOTO 50
340 END
```

Cut here.

Happy scanning.

I am looking for anyone that would like to sell the Lowe Airmaster 2000 ACARS decoder program with interface cable. Please contact me if you have one to offer.

Thanks

Tom

5529. Re: Scanner on a Cruise ship

Newsgroup: rec.radio.scanner
Date: 2000-03-08 00:00:00 UTC
From: John Coan <jcoan@mindspring.com>
Message-ID: <38C6DBFE.88997B5F@mindspring.com>
Source record: 92529
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I guess I'm the only one to disagree about how fun it is to take a scanner on a cruise.

Let me preface by saying that unless you have a window, or better still, a balcony, they are quite well shielded by the ship's metal hull and won't be much fun.

If you have a balcony, you are in business. Take along a 30 foot piece of shielded wire with alligator clips on each end. String the wire on the balcony, as much in the clear as possible. Run the wire under the door into the cabin. The wire, if thin enough, will not prevent the door from closing. If you have a window, tape your wire diagonally to the window. If you have just a porthole, with a "tunnel" through the hull, you won't have much luck.

Clip the other alligator clip to your scanner antenna.

What can you listen to? Here's a partial list:

Crew fire drills
Marine band stuff (interesting when in port, not much talking whilst at sea.)
Public service (police, fire, etc.)activity in port
If you scanner is unblocked, there is also a lot of cellular activity. Most interesting when in English speaking waters.
Shore excursion staff coordinating busses and such
Cruise staff arranging fun and games.
Wireless mics from the show lounge.
Cordless phones used by the stewards.
And, the biggy, all the pax who have FRS handhelds. This number is growing by leaps and bounds. And they don't seem to mind getting off in foreign countries and talking away illegally.

One observation... there is tons of RF hanging around a cruise ship that will overload your scanner on certain freqs. The ship itself generates all this. Take a look topside and you'll see antennas for sats, VHF, HF etc. etc. This RF pollution also tends to wreck shortwave broadcast reception. (Same wire antenna works.)

Also, I recommend a small FM broadcast receiver. It's nice to tune in local radio stations in port for the local news. In the British islands they also routinely rebroadcast BBC news feeds.

If anyone is interested in frequencies there were a couple lists posted a few months ago on rec.travel.cruises. A dejanews search will be productive.

Have fun!

You'll need either a voice inversion descrambler or a BFO to do that.

There is always one class of telephone call it is lawful to listen to;
your own.

As for using a BFO, well, if it sounds like SSB, listen to it as SSB.
That's straightforward, and NO ONE (except the Saudi government) thinks
SSB is security. You can even demodulate 220 MHz ACSSB systems with a SSB
receiver.

Some years ago, I worked for a company that designed and made cordless
telephones (among other things) and the designer was crestfallen when I
showed hm how the latest "scrambled" telephone could be clearly heard on
an SSB receiver. Didnt stop them from marketing it, of course. BTW there
is a SIMPLE countermeasure to casual SSB demodulation; add subaudible
tone.

Cheers,

Cortland

You never said what the discriminator has to do with it--do you mean why
because of the discriminator or why in spite of the discriminator, in which
case why did you even mention the discriminator at all?
Answer: because it is made with better parts and technology and by brighter
designers--the 2040 sells for about $75 on ebay, not the hottest model

5541. ID on skip tx callsign?

Newsgroup: rec.radio.scanner
Date: 2000-03-08 00:00:00 UTC
From: Boxcars <boxcars98@yahoo.com>
Message-ID: <F5Gx4.17989$mK.1357441@brie.direct.ca>
Source record: 92541

OK, here's one for ya.

I caught a skip transmission today from somewhere (I believe) way east of me (I'm on the Pacific coast) on 39.50 MHz. The station ID'd as KOB611. Unfortunately, I didn't get much in the way of other traffic to help ID the station. I was picking up numerous other stations from Maryland, Virginia, South Carolina (SCHP on 42 MHz) around the same time, so I'm thinking it could possibly be in the same region.

I checked the PerCon on-line database with no luck. I'm about 90% sure of the callsign. Does anyone happen to have an older frequency database or list they could check or does anyone know of a callsign KOB611 on 39.50 MHz?

And no...I don't have anything else better to do with my time. Not since they cancelled Adam-12, anyway.

Adios,

Boxcars

Is this the train to Tecumcari?

Probably says something like: "UP Detector. Milepost XXX.X. North (or South - maybe East or West) track", Then a bit later :"UP detector, Milepost XXX.X. ... (whatever) Track. Axle count XXXX. Temperature XX. Detector Out". In order to get the right number of cars you must subtract the number of locomotive axles on the train. Various locomotives may have 4 or 6 axles each and they may be mixed on a single train. A very few cars MAY have six axles, but that is not the norm.

That is interesting!! I work for an Icom dealer that gets the radio direct from Japan and we don't even have one yet. The only thing I saw was a dealer advisory notice (so called "secret...not to release to public information" fax from Icom Japan. I'll have to follow up and see if I can get one in. If so, I'll post what I find out on the radio (bench testing, etc.)

Oh, gee whiz, a boon from on high... don't do me any favours.
You started this thread, so I guess you had to bring it back up, although it's
been dead for a while. To add to your quitter's post of a month ago, you now
state that you WON'T wimp out as early as you first said, and then say that any
amateur who gets licensed after the April changeover cannot be a "real ham".
I shudder to think of what kind of help you'd be giving to a prospective
amateur... "Listen, sonny, when YOU get your license, you'll be better than
anyone who gets it after April... YOU'LL be the next generation of highbrow
elite who baselessly feel they are better than the other guy and never let a
chance go by to say so, whether it's appropriate or not, either on the air or
on the 'Net."
I'd have hoped you decided not to quit because you rethought the absurdity of
your whining, but I guess you're sticking around to make it worse.
Oh well, que sera, sera...

Vaisala is a manufacturer of - you guessed it - weather balloon
equipment. If those are the only markings (make and model) then whoever
sent it up was pretty foolish not to put their name and number on it.

I decided not to turn in my badge before April 15th because I might still
be able to help test someone who wants to be a real ham.>>

No, laddy. Better that you quit and go hang with your superaged friends in
your little corner of HF heaven, as far away from the rest of us as you can
get, and keep to your daily discussions of hemorroids and the rising cost of
nursing care. In a few years you and your kind will be too senile to work a
key anyway. Can't wait.

Ten-Four, good buddy, catcha on the skip.

"THEY" already know exactly where it is, how many people have seen it, who knows of its whereabouts, the maiden names of the mothers of all these people, their social security numbers. They're waiting to see how long it will take for you to do something and they're listening and watching everything you are doing in the mean time. Whatever you do, don't photograph or video tape it ("THEY" will only take it from you anyway). Don't attempt to put it in your car and drive it anywhere ("THEY" love "Fleeing Felons" for target practice). If you have a pretty wife or daughter DO NOT LET THEM NEAR IT!!! Bubba be down in the Oval Office watchin' them CCTV monitors lookin' fo dates now dat Hillary done moved up New York...and Ol' Bubba has needs, y'all. :)

C'aint git much furrther of da beaten paff den dis ry-cheer. I wuz gonna tell y'all try whippin' da Hell outta dat thar critter wiff a 102-inch stainless steel CB antenna... pokin' the lil hell-raiser in the head a buncha times if ya gotta 'til he finally cetches on-tah da fack dat he gotta get to movin' awn...but then I figgerd it's prob-alee too darn rusted on-tah the old F150, and wiff the F150 bein' up on dem blocks like its been since '79 while y'all be waitin' on a partcha need to git it goin' ag'in would just make the ball n spring mount a lil to hard to be gittin' to wiff out a ladder, and then I recollected dat duh ladder is bein' used to hold up dah awnnin' on dah house. Watcha could do would be to marry the lil lady, move in wiff her. Maybe as weddin' giffs y'all might wanna register at the local ceement block company and hope that summa dah party goers awn yo weddin' day might buy y'all a buncha dem blocks and y'all could take the tarz off dah house and ceement dem blocks 'round dah house. But befo y'all go gittin' inta all-a-dis, Are y'all show it's a critter under dah house, or does yo lady friend gotta excape hatch for othah fella to be climbin' through when they all hear y'all comin? :)

I think we just had this posted in this group... a few days ago... you might want to try and read the older messages

to sum it up for you some people thought it was a cheap scanner that was had to use.... others pointed out that it isn't any harder to use than some of the newer scanners on the market today....
My personal feelings on the 2500... its probably as good as any other scanner it does suffer from buttons that are a bit too small.... but hey its a small scanner.
I have one.... I like it... it has some unique features.... prices vary....

not like I have to tell you this.... but try to pick it up as cheaply as you can... like you would if you were buying anything else.

5563. PRO 26 HanhHeld Discriminator out which chip do you use???

Newsgroup: rec.radio.scanner
Date: 2000-03-09 00:00:00 UTC
From: bitstrm-NOSPAM-@hotmail.com
Message-ID: <48qgcs0kq6rrvv1tufkifhc3vlq5cpjqh3@4ax.com>
Source record: 92350

in b. cheeks discrim.txt he gives 2 different chips to try... the
10930v pin 12 i tried this out and hooked a pair of haedphones to the
jack i installed and it sounded the same as what comes from the
speaker!! is this o.k. will it work for 4lfsk??

then i tried the other chip he recommends in the sec. part of his txt
the njm3403av ic 17 pin 14 i tried this listened and it sounded much
different!! i first had to play with the squelch then i could here was
what sounded like a relay clicking on and off --it sounded digital!!--
on clik off click --they came in bursts and then silence not even as
fast as 512pocsag?? after listening to the towers for awhile i can
tell what speed it is....anyway is this the pin to use i looked for
the ic17 white lettering on the boards to no avail so i lifted the top
board off //with the battery end closest to u// flipped the board over
and tied to the chip on your right hand side down towards the bottom
14 pin soic-ish left row of pins last pin!! my ? with this pin
is it doesn't seem to pick up as much traffic--data-- as the other
chip //i realise the other is an audio pin but it doesn't sound as
clean as it needs to be unless im wrong// i tuned to a freq. that
transmits pocsag 512 and 1200 and also a flex sounding channel
heard no clicks on the flex channel and a few on the psag channel???

any info, assist appreciated!!!!

NFM DISCRIMINATOR CHIPS - BASEBAND AUDIO - SQUELCH GATE DATA
==

There is a growing interest in tapping the
baseband audio out of various scanners for
decoding of a variety of esoteric signals,
including CTCSS, SCA, FSK, RTTY, FAX, etc. By and
large, such signals cannot be take from TAPE REC
jacks, headphone jacks, and EXT SPEAKER jacks
because of the voice-band filtering that is done

between the signal source and these output jacks.

Therefore, it is necessary to tap the "baseband audio" directly at the output of the discriminator chip for your scanner. The below Table shows a list of scanners, the discriminator chip(s) used in the scanner, circuit symbols of those chips, and three pins of general interest on the chips: RF-Input, Scan Control, and, of course, the baseband audio pin.

Even though your scanner may not be listed, if you can find its discriminator chip, it will be listed with one or more scanners below, the pins of which will be the same for your unlisted scanner! Corrections and additions to this list are requested. See my mail and other addresses at the end of this file.

==========

UNIDEN SCANNERS and Realistics made by Uniden
==========

Uniden does their darndest to make it difficult to hack their scanners. You guys have some work to do. Here's the deal: Even though all NFM discriminator chips have a SCAN CONTROL pin, Uniden doesn't always use it! Some Uniden scanners have a separate Squelch circuit with the SCAN CONTROL pin on the discriminator unused! You have to find the real Squelch circuit, and then determine the Logic for that circuit. It's easy, but differs from one scanner to the next, and I can't cover them all. I need your help.

See Table 2 below for a good reference. By and large, those with scanners of Uniden origin have to tackle the preliminaries in this fashion:

1. Locate the NFM Discriminator chip - you will find the Audio pin from Table 1. It remains valid.

2. Determine if the SCAN CONTROL pin on that chip is used. (Follow its trace out on the PCB)

A. If so, then determine the logic order. If the SCAN CONTROL pin is used, then we can use it!

B. If the SCAN CONTROL pin is not used, then locate the real Squelch circuit. The schematic and block diagrams in the service manual will be helpful. Uniden uses chips like NJM2902, NJM2904 & NJM3403 to generate Squelch logic. Use your voltmeter to find a spot where the Squelch logic is 0v and 5 or 8v, depending on the setting of the Squelch control. Table 2 shows details for those Uniden-made scanners with which I am familiar.

TABLE 2
UNIDEN SQUELCH CHIPS
Updated 4/08/96

Scanner	SQ Chip	CktSym	Pin

Point well taken. You're right. I mistook it for another "bash whatever
product someone else likes and I don't own" kind of thing that crops up all too
frequently here. Apologies are offered herewith.

The February issue of Monitoring Times has a very good write up on
Trunking Scanners. The article compares the Pro92 with BC245xlt.

If you're planning on using the Pro92 for scanning Trunked System, then
I would avoid buying this scanner! If you're planning on using it for
conventional scanning, then you may want to consider buying a used one.

5568. Re: Railroad Listeners what does it mean when the hotbox says axle count

Newsgroup: rec.radio.scanner
Date: 2000-03-09 00:00:00 UTC
From: Jason Webb <nswflatrunking@gulfaccess.net>
Message-ID: <lKCx4.7693$yV1.1890092@tw11.nn.bcandid.com>
Source record: 92447

ok a Hotbox is an overheated axle on a train which if not taken care of can most often derail the train
it has to do with the roller bearings in the wheels and if they are not properly lubricated they will majorly overheat and may catch fire - the term comes from earlier times before roller bearings,
when there were boxes covering each bearing on the wheel and were cotton wadding i believe soaked in oil - if these went dry the heat would be very intense and set the wadding on fire - hence "Hotbox"

The axel count is the total number of axels in the train (Including engines) if the Defect Detectors (as they are now called as well) detect a overheated bearing it will announce to the engineer which axle is the problem - these detectors also detect other problems such as dragging equipment, ect

beware that some Railroad cars such as heave flatcars have 6 axels most cars have 4 - some of the newer piggyback cars have 2 and some Locomotives have 8

ex. 00----00 000----000 0------0

Hope that Helps

Hey, I just came across this new scanner site for the Phoenix area. The URL is

http://www.geocities.com/phx_scanner/

Not alot on the page yet, but they do have something called voice chat which will allow you to talk with other scanner buffs around the world in real time.

It is cool. Check it out.

Manny

hi name is denny. we live in oxnard,ca. i decided to sell my uniden
bc/3000xlt.
it is in very good to almost exlt cond. it has a metro west 1000ma batt. pack
only a few mo in use.this gives a person about 10 hrs scanning,compaired to the
5hr stock batt. it comes with ant, ac/dc pwr cube, manual, cig liter plug, and
a extra
empty batt pack for car/truck use,this way youdon't overcharge the west pack!
price : $175.00 plus 8-9 bucks fer shipping& insur. if you have any
questions or need more info, call me or e-mail (805) 488-7622
i bought a re race / alpha 2000 by relm. this is the reason for sale.
also see
uniden's web site for specs ect.. tnx.

have a great week and good scanning. denny.....

Can anayone tell me what " data slicers " are? I know what a "FSK 2 and 4level " and a " DISCRIMINATOR " are. I'm bit confuse here. I know it in the radio but what is the difference with a discriminator output. On my optocom the instruction say that the 2level data slicer is on the pin 6 of the DB9 connector so if there is no data slicer on the radio but a dicriminator output will the fsk one hand connector be like a mono 1/8 in. instead a 9 pin for the RS-232? but i wish to know the difference beetwen discr. output and a data slicer. I would appreciate all the anwsers that you can give me, thanks...

I have an optocom and it has built-in 2level data slicer, so if they sale that way is probably legal but maybe its the software that we buy illegally. if we could buy it from the company that is doing those communications encoding devices we would not have illegal issue, and distribute those software to the hole wild world is looking for trouble don't you think? Me legal are not, if i get some thing that wouldn't be legal i don't tell to all who wants to know and i keep it for myself...

>

Everything is rostered in NZ. In theory at least. Tow firms are rostered on and off on a monthly or weekly basis for tows in the area (unless the car owner requests another firm). I've heard senior officers in the control rooms explaining to the staff on the scene that they have to wait for the rostered tow, they can't just let the truck that "just happened to be passing" take the car, or the rostered tow firms will get snarky (we assume they're listening as well).

Funeral directors are rostered as well, not that they normally cruise for business, as well as another tow roster for cars that have been impounded.

That being said, I've noticed wee camps near black spots at the end of holidays weekends out in the countryside. One intersection on SH2 near Auckland (bad road on the way back from major weekend getaway area) had 2 towies, and ambulance and a cop car parked up, just waiting for the inevitable. I suspect the rules will get bent then, as another towie might have troubles getting in under the circumstances.

Source record: 92471

The Pro - 92 is the most versatile and easily modified radio on the market today. Many people believe in error that this radio is not capable of monitoring those coveted, juicy, cell phone calls. If you want to listen to who your neighbors wife is screwing, the Pro - 92 is the scanner for you!

Here is the secret:

1. Buy a Pro-92
2. Remove it from the box.
3. Light a candle.
4. Begin praying to the deity of your choice.
5. Repeat over and over, "Oh God, Oh God, I wish my Pro-92 was a pre cell ban scanner.....I wish my Pro-92 was a pre cell ban scanner...
6. Within minutes of your solemn and earnest pleading, your scanner will begin to magically receive those juicy phone calls.

Note: If you find your scanner is still not able to pick up your neighbors wife in her mini van traveling to meet her lover at the Motel 6, try rubbing petroleum jelly on the rubber ducky antenna. Grasp the antenna firmly between your thumb and forefinger, and stroke it vigorously up and down while repeating steps 4 and 5. While this may not make the scanner work, it will give you an idea of what is currently taking place at the Motel 6.

I have the opportunity to purchase an AOR2500. I was wondering if anyone could give me some info on this unit. I know that it is capable of computer interface but was more interested in what it's worth and if it's a decent unit to buy and what the frequency ranges are.

Thanks in advance.

Possibly KRB611, assigned to Smyth County, VA in the town of Marion,
about 15mi from the N.Carolina border in western Virginia. They're licensed
as local government (PL) on 39.50 and 39.58 MHz.

Here in D.C, mobile scanning is legal, but it is an expensive traffic citation for a tow operator to get caught in possion of a scanner (this is how they tackle call jumping). Problem is, a lot of officers are unaware of the violation (similar to using a scanner to aid in the commission of a crime), and things are just too fast paced to really check it out. Most uncalled tow operators just "happen" upon the scene; after all, there's nothing to stop the base from monitoring the scanner, then dispatching the tow over their own radio system. Don't forget, we haven't even touched on the FCC's rule about using what is heard over scanners for personal gain.

This is the government model where the 800 to 900 mhz frequencies are open.
On the domestic model the entire 800 to 900 mhz are is blocked, not just the
cellular frequencies. Great reception. Covers shortwave through UHF.
Excellent condition includes the mobile bracket, DC car power cord and the
original manual.

$525 shipped in the USA prepaid via a money order or cashier's check.

Please e-mail me if you need a photo of the receiver.

Hello Scanner Enthusiasts:

Got an old Electra Bearcat Scanner that is Cry-stalled?
Well, today's your lucky day. I've decided to get rid of
our old crystal bank and have hit on the following plan:

1. Come to our website: www.electracorp.com
2. See our nifty TigerScan. Hmmm, maybe i don't need rocks!
3. Leave a list of desired frequencies on our email.
4. If in stock and good condition (on freq., active) we'll sell you what
we have for $1.00 each (that's less than 1/10 the price of a new
crystal!!!!!!!)
(Please add $1.00 for shipping; and 5% sales tax if in Indiana)
We will inform you via email of our inventory/availability.
5. Upon receipt of check or money order, we'll send your
Bearcat crystals out same day via U.S. mail in a padded shipper.
6. You've got reception, we've got space (plus a buck) :) WIN-WIN!

Notes: Make sure your Bearcat is capable of receiving the band of
frequencies
you wish to monitor, we're fresh out of BC-III modules and these
old Bearcats were not designed to receive in the 800-900 MHz band.
We also have antennas, AC power cords & manuals, but NO REPAIRS!
If we get too swamped, this offer will end with the month (March 31, 2000).

Best regards,

Dave Lovell

That's not an FCC rule - it is a Federal law. There's a difference.
Violating an FCC rule is an administrative violation (usually). Violating
the Communications Act or ECPA is a criminal offense.

If you want just a conventional scanner then it's not too bad but as a
trunktracker - Forget it
especially on large systems

I evaluated one on the local EDACS system and it really did not perform well

the only thing it had going for it was the Alpha-Tags

I prefer the BC245xlt - or the Pro-94

and hopefully the BC780xlt

Now if we could get Uniden to step up to the Challenge of Making a handheld
version of the 780xlt and i would be set

Later

David,

Thank you for the kind offer. I checked out your website, and I have an old Bearcat IV crystal scanner that could use a few new frequencies. Here is my list:

33.52
33.94
51.00
146.700
154.755
155.070
155.250
155.460
155.475

If you wish I can pay with a postal money order. My address is:

Ned Parkes
1535 Spring Creek Circle
Macungie, PA 18062-9442

Thanks again for your kind offer.

Regards,
Ned

From: av8tor@flash.net
Message-ID: <uiby4.2910$624.227836@news.flash.net>
Source record: 92387

Just got my PRO-2052 and overall I'm really happy with mine. I've read some reviews which state that the PRO-2052's sensitivity is a bit weaker than other models. However I have not found that to be true. My current rack of scanners include the PRO-2006, PRO-2035, PRO-26, PRO-94 and now the PRO-2052 and the 2052 is right up with the rest.

80% of my listening is in the Civil Air and Mil Air bands and when compairing the PRO-2006, 2035, and the 2052 they all seem to pick up the weekest of signals when using a Discone Antenna.

The fact this radio can receive Mil Air and is capable of Trunking was the main reason for buying it.

For others wanting to discuss their thoughts (good or bad) and/or questions about the PRO-2052 please subscribe to our list by sending email to: pro2052owners-subscribe@onelist.com

Thanks,
George

Use of a scanner during the commission of a crime is covered under various state statutes. I have not seen it in Federal law anywhere - do YOU have a cite?

As for the "personal gain" aspect, try 47 USC 705 (formerly section 605) for starters. There may be additional provisions in 18 USC 2510 et seq.

I find the Pro-92 works fairly well on smaller Motorola trunked
systems. We don't have any EDACS systems in Utah, so I can't
comment on that aspect.

It does have mild ID wobble on two Smartzone sytems I listen to,
but no wobble on the Single site, Multicast or Smartnet systems
I monitor.

I suspect the priority, patch info, etc in the subaudible data stream
is causing some of the wobble. I can attribute severe multipath to
ID wobble, which also causes my Pro-90 to show incorrect IDs
now and then. Go figure.

The best way to know for sure is buy it and see how it performs
on your systems. If it works good, keep it, if not, take it back for
a refund.

I'm keeping mine! (nanner-nanner Chuck!)

Gee, some people go to great lencths just to be Realistic!

Yes, 10.8 is not 10.7 MHz IF, but look on the bright side;
you're less likely to interfere with your co-located two-way gear
if you're on an offset IF frequency. Many transceivers, portable
and mobile, use 10.7 MHz.

Oh well, you can't please all the folks all the time.
Best wishes,
Dave Lovell

From: Soy Bomb II <mm11720@navix.net>
Message-ID: <8aevrf$10n$1@iac5.navix.net>
Source record: 92296

On strong signals a Welz factory stock antenna does very well in certain ranges and I would like to buy just the replacement antenna (not the radio it comes with) from a US distributor. The antenna according to the review is called the WS1000. Can any of you experts tell me where to find one in the US. Thanks,

Bob

This antenna is easy to build and will exhibit a bit of gain too boot. Worth the little effort for a vertical.

Glenn

Hola a todos:

Desde hace unos d�as estoy buscando la forma de ganar dinero en Internet, he recorrido grupos de noticias, tablones, avisos clasificados...

En todos estos lugares encuentro mensajes como el que reproduzco m�s abajo.

Entonces empec� a pensar: Es simplemente una cadena, esto es algo que no anda... Esto no es algo nuevo, ya se hace desde d�cadas y no s� de nadie que haya hecho dinero... Pens�ndolo bien es un verdadero trabajo... �y si funciona?...Al final me decid� y aqu� estoy.

Si tu tambi�n te decidiste o estas dudando, sigue leyendo. No creas que va a ser f�cil, es necesario colocar este mensaje en todos los lugares que se te ocurra publicarlo, news, tablones, avisos clasificados, etc. Cuanto mayor sea la cantidad de veces que lo repitas mejor para ti (y para mi por supuesto, ya ver�s) por eso te digo que es un verdadero trabajo, te va llevar varias horas, va requerir de toda tu experiencia, tambi�n va a depender de tu constancia para seguir publicando y tu habilidad para promocionarlo (pero no te preocupes).

La diferencia con lo que se hac�a antes con el correo tradicional es que esta cadena no depende de cinco o diez personas a las que les llega el mensaje, sino que es para todo el mundo, y en Internet hay miles de personas que ver�n el aviso y alguna (como yo) se va a decidir.

Y por �ltimo �Has pensado cu�nto puedes aprender en una tarea como esta, para aplicarla en trabajos futuros?

Yo soy ahora el �ltimo de la lista que vas a encontrar y donde (si sigues adelante) vas a estar tu al repetir el mensaje, dej�ndome pen�ltimo, te deseo suerte, ya que tambi�n parte de esta suerte va a ser para m�.

Este es el mensaje que encontr� (NO ME HAGO CARGO DE LAS FALTAS DE ORTOGRAFIA DE LO QUE SIGUE):

Esto es lo que le pas� a un amigo:

D�as atr�s, cuando navegaba por estas p�ginas de Noticias, as� mismo como Ud. lo esta haciendo ahora, se me apareci� un art�culo similar a este que dec�a que uno puede ganar miles de d�lares en pocas semanas con una inversion de $6.00!. Enseguida pens�, Oh no! otra estafa mas?, pero como la mayoria de nosotros, la curiosidad pudo mas, y segu� leyendo.

Segu&#65533;a diciendo que Ud. enviar&#65533; $1.00 a cada uno de los 6 nombres y direcciones mencionados en este art&#65533;culo. Entonces Ud. anota su nombre y direcci&#65533;n al final de la lista reemplazando al #6, y envie o ponga este art&#65533;culo a por lo menos 200 newsgroups(Hay miles de estos en todo elmundo).

No hay truco, eso fue todo. La gran diferencia entre este sistema y otros es que Ud. tiene una lista de 6 en vez de 5... Esto significa que su promedio de ganancia sera aproximadamente 15 veces mayor!!!

Despu&#65533;s de pensarlo una y otra vez, y consultar con unos amigos primero, decid&#65533; probarlo. Pens&#65533; que lo &#65533;nico que podria perder eran 6 estampillas (sellos de correos) y $6.00, verdad?. Como probablemente muchos de nosotros, estaba un poco preocupado por la legalidad de todo esto. Entonces investigu&#65533; en la ley internacional de Correos Internacionales de Am&#65533;rica y observe que en el articulo 4&#65533; dice que en este tipo de sistema de traslados de dinero en cantidades m&#65533;nimas era absolutamente legal.
Entonces invert&#65533; mis $6.00.....IMAGINENSE QUE!!!...a los 7 d&#65533;as, empec&#65533; a recibir dinero por correo!!!. Estaba sorprendido! Todavia pensaba que esto terminar&#65533;a enseguida, y no pens&#65533; mas en otra cosa. Pero el dinero seguia llegando. En mi primera semana hice unos $20.00 a $30.00 d&#65533;lares. Para el final de la segunda semana tenia hecho un total de m&#65533;s de $1,000.00!!!!! En la tercer semana recib&#65533; m&#65533;s de $10,000.00 y todavia seguia llegando m&#65533;s. Esta es mi cuarta semana ya hice un total de m&#65533;s de $41,000.00 y esto sigue llegando m&#65533;s rapidamente (mi esposa e hijos se pasan abriendo los sobres y yo consiguiendo Newsgroup). Esto se puso serio!!!! Todo esto realmente vali&#65533; la inversi&#65533;n de $6.00 y 6 estampillas (sellos). Me gastaba m&#65533;s que esto en sorteos y loterias!!

Perm&#65533;tanme explicarles como funciona esto y lo mas importante el porqu&#65533; funciona....tambi&#65533;n, Ud. aseg&#65533;rese de imprimir una copia de este art&#65533;culo AHORA, para poder sacar toda la informaci&#65533;n a medida que lo necesite.

El proceso es muy facil y consiste en 3 pasos sencillos:
PASO No. 1:
Obtenga 6 hojas de papel y escriba en cada una de ellas FAVOR DE INCLUIRME EN SU LISTA DE CORRESPONDENCIA O E-MAIL. Ahora consiga 6 billetes de US$1.00 dolar e introduzca cada dolar en un sobre con la hoja de manera que el billete no se vea a trav&#65533;s del sobre!!

Mejor ponerlo encerrado en un papel de color oscuro para prevenir robos de correspondencia. Ahora Ud. deberia tener 6 sobres sellados y en ellos un papel con la frase mencionada, su nombre y direcci&#65533;n, y un billete de $1.00 dolar. Lo que Ud. Esta haciendo con esto es crear un servicio y eso hace que esto sea ABSOLUTAMENTE LEGAL!!

Enviar los 6 sobres a las siguientes direcciones:

#1 Rodrigo Cabrales
Av. Per&#65533; #784 dpto. A - RECOLETA
Santiago-CHILE

#2 Jose L. Giron
c/ C�firo N.9 2�-b
41018
Sevilla
Espa�a

#3 Luis Guti�rrez
Villaviciosa de Od�n - C.P. 28670
Madrid - Espa�a

#4 Antonio Aparicio
C/. Feliu i Codina, 45 2� 3� Esc. B
08031 Barcelona (ESPA�A)

#5 Adri�n Fern�ndez
Av. Pr�ncipe de Asturias, "Los Laureles", 4 - 3�D
33212 Gij�n - Espa�a

#6 Antonio Garc�a
Arenas n�6, P-1, 2�E
18005 Granada - Espa�a

PASO No. 2:
Ahora elimine el #1 de la lista de arriba y mueva los otros nombres un n�mero para arriba (el #6 se convierte en #5, el #5 se convierte en #4, Etc.) y agregue SU NOMBRE y direcci�n como el #6 en la lista.

PASO No. 3:

Cambie todo lo que crea conveniente de este art�culo, pero trate de mantenerlo lo mas posible cercano al original. Ahora ponga su art�culo en por lo menos 200 newsgroups(existen mas de 24,000 grupos). Solo necesita 200, pero cuando mas cantidad lo ponga, mas dinero le llegar�!!!.

Aqu� van algunas indicaciones de como introducirse en los newsgroups:

COMO MANEJAR LOS NEWSGROUPS

No.1 Ud. no necesita redactar de nuevo toda esta carta para hacer la suya propia. Solamente ponga su cursor al comienzo de esta carta, haga click y lo deja presionando y b�jelo hasta el final de la carta y l�rguelo.
Toda la carta deber� estar sombreado. Entonces, apunte y haga click en edit arriba de su pantalla, aqu� seleccione copy. Esto har� que todala carta quede en la memoria de su computadora.
No.2 Abra un archivo notepad y lleve al cursor arriba de la p�gina en blanco. Presione edit y del menu seleccione paste. Ahora tendr� esta carta en el notepad y podr� agregar su nombre y direcci�n en el lugar #6 siguiendo las instrucciones de mas arriba.
No.3 Grave esta carta en su nuevo archivo del notepad como un .txt file. Y cada vez que quiera cambiar algo ya lo puede hacer.

PARA LOS QUE MANEJAN NETSCAPE

No.4 Dentro del programa Netscape, vaya a la ventana
titulada :Window y seleccione netscapeNews. Entonces elija del menu
Options, seleccione Show all Newsgroups. En segundos una lista de
todos los Newsgroups de su server aparecer�. Haga click en cualquier
newsgroup.
De este newsgroup haga click debajo de TO NEWS, el cual deberia estar
arriba, en el extremo izquierdo de la p�gina de newsgroups. Esto le
llevar� a la caja de mensajes.
No.5 Llene este espacio. Este ser� el t�tulo que ver�n todos
cuando recorran por la lista de un grupo en particular.
No.6 Marque el contenido completo del .txt file y copie usando
la misma t�cnica anterior. Regrese al Newsgroup TO NEWS y Ud. esta
creando y empastando esta carta dentro de su programa o posting.
No.7 Presione send que est� en la parte superior izquierda.
Y UD. HA FINALIZADO CON SU PRIMERO!... FELICIDADES!!! .

LOS QUE USAN INTERNET EXPLORER

PASO No. 4: Vaya al Newsgroups y seleccione Post an Article.
PASO No. 5: Carge el art�culo.PASO No. 6: Repita el No.6 mas arriba.
PASO No. 7: Presione el bot�n Post.

ESTO ES TODO!. Todo lo que tiene que hacer es meterse en diferentes
Newsgroups y empastarlos, cuando ya tenga pr�ctica, solo le tomar� unos
30 segundos por cada newsgroup!
**RECUERDE, CUANTOS MAS NEWSGROUPS CONSIGA, MAS RESPUESTAS (Y DINERO)
RECIBIRA!! PERO DEBE DE ENTRAR EN POR LO MENOS 200**
YA ESTA!!!.... Ud. estar� recibiendo dinero de todo el mundo, de lugares
que ni conoce y en unos pocos d�as!. Eventualmente querr� rentar un
P.O.Box por la cantidad de sobres que ir� recibiendo. Si prefiere usar
sobrenombres, puede crear un nombre toda vez que el cartero entrege
donde debe.
**ASEGURESE DE QUE TODAS LAS DIRECCIONES ESTEN CORRECTAS
Ahora el POR QUE de todo esto:
Tomemos un ejemplo:
* De 200 enviados, digamos que recibo solo 5 respuestas (baj�simo
ejemplo). Entonces hice $5.00 con mi nombre en la posici�n #6 de esta
carta.
* Ahora, cada uno de las 5 personas que ya me enviaron los $1.00 tambi�n
hacen un m�nimo 200 newsgroups, cada uno con mi nombre en el #5 de la
lista y solo responden 5 personas a cada uno de los 5 originales, esto
hace $25.00 mas que yo recibo,
* ahora estas 25 personas pone un m�nimo de 200 Newsgroups con mi nombre
en el #4 y solo se recibe 5 respuesta de cada uno. Estar�a haciendo
otros $125.00 adicionales.
* Ahora esta 125 personas ponen sus m�nimo de 200 grupos con mi nombre

en el #3 y solo recibe 5 respuestas cada una, yo recibo un adicional de 625.00!.
* OK, aqu&#65533; esta la parte mas divertida, cada una de estas 625 personas ponen sus cartas en otros 200 grupos con mi nombre en el #2 y cada una recibe solo 5 respuestas, esto hace que yo reciba $3,125.00!!!.
*Estas 3,125 personas enviar&#65533;n este mensaje a un m&#65533;nimo de 200 Newsgroups con mi nombre en el #1 y si solo 5 personas responden de los 200 grupos, estar&#65533; recibiendo $15,625.00!!.
De una inversion original de $6.00!! mas estampillas(sellos). FABULOSO!
Y como dije antes, que solo 5 personas respondan muy poca, el promedio real seria 20 o 30 personas!. Asi que pongamos estos n&#65533;meros m&#65533;s a calcular.

```
Si solo 15 personas responden, esto hace:
en la #6 $15.00
en la #5 $225.00
en la #4 $3,375.00
en la #3 $50,625.00
en la #2 $759,375.00
en la #1 $11,390,625.00 (imaginate)
.....si, mas de ONCE MILLONES DE DOLARES!!!
```

Una vez que su nombre ya no esta en la lista, saque el ultimo anuncio del Newsgroup y envie otros $6.00 a los nombres en esa lista, poniendo su nombre en el #6 y repetir todo el proceso. Y empezar a ponerlos en los Newsgroups otra vez.
Lo que debe recordar es que miles de personas mas, en todo el mundo, se conectan al Internet cada d&#65533;a y leer&#65533;n estos art&#65533;culos todos los d&#65533;as como USTED Y YO LO HACEMOS!!!.
As&#65533; que creo nadie tendr&#65533;a problemas en invertir $6.00 y ver si realmente esto funciona. Algunas personas llegan a pensar...y si nadie decide contestarme?
Que!! Cu&#65533;l es la chance de que esto pas&#65533; cuando hay miles y miles de personas honestas (que como nosotros) buscan una manera de tener independencia financiera y pagar cuentas!!!., y estas dispuestas a tratar, pu&#65533;s No hay peor lucha de la que no se hace. Se estima que existen de 20,000 a 50.000 nuevos usuarios TODOS LOS DIAS! (en todo elmundo)

```
*******OTRO SISTEMA PARA COMUNICARSE ES CONSIGUIENDO E-MAIL DE PERSONAS
PARTICULARES, DEBE SER POR LO MENOS 200 DIRECCIONES, Y ESTO TIENE UNA
EFECTIVIDAD DE MINIMO 5% AL 15%. SI SOLO BUSCAN PERSONAS QUE HABLAN EN
ESPANOL, VAYAN A UN PROVEEDOR DE E-MAILS E IMPRIMAN UN APELLIDO LATINO Y
YA.
```

**********Recuerde de hacerlo esto en forma CORRECTA , LIMPIA Y HONESTAMENTE y funcionar&#65533; con toda seguridad. Solamente tiene que ser honesto. Asegurese de imprimir este art&#65533;culo AHORA, Trate de mantener la lista de todos los que les envian dinero y siempre f&#65533;jese en los Newsgroups y vea si todos est&#65533;n participando limpiamente. Recuerde, HONESTIDAD ES EL MEJOR M&#65533;TODO.

No necesitas hacer trucos con la idea b�sica de hacer dinero en esto. Suerte, juguemos limpio y aprovechar esta hermosa oportunidad de hacer toneladas de dinero con internet.

**Dicho sea de paso, si Ud. defrauda a las personas poniendo mensajes con su nombre y no envia ning�n dinero a los dem�s en esa lista, Ud. recibir� casi NADA! Adem�s �sto si que se puede considerar como ilegal. Esto es la m�s limpia y honesta manera de compartir fortuna que yo jam�s haya visto, sin costarnos mucho excepto un poco de tiempo. El TIEMPO ES IMPORTANTE!, no dejar pasar mas de 7 d�as del momento que vea este art�culo!. Tambi�n puede conseguir lista de E-MAIL para extra d�lares. Sigamos todos las reglas del negocio! Recuerde mencionar estas ganancias extras en sus declaraciones de impuestos.

Gracias otra vez y SUERTE������

Source record: 92405

Hello. I have a few Bearcat 210XL, 18 channel scanners that I have dug out of the closet. They all seem to have the same problem of constant squelch/white noise. I am assuming this is an on going problem with these.Outside squelch controls check out ok. Possible cap problem? All seem to work ok other than this problem. I have no servicing info on these units and all of my test equipment is in storage for another month awaiting our new house. If you have any info on how to rectify this problem quickly, please E-Mail me. I would like to get these working prior to the new house and shop. Any info would be highly appreciated! Thanks in advance!
Glenn Daniels- KB2GQZ
PS. I also collect and restore original Bearcat scanners by Electra Corp and other crystal scanners, working or not. Have any lying around? Reasonable price? E-Mail me. Thanks!

5674. FS: Wide-band 25-1300 MHz. Discone Scanner antennas $29.95

Newsgroup: rec.radio.scanner
Date: 2000-03-11 00:00:00 UTC
From: AntennaWareHouse <kingpop@cis.net>
Message-ID: <38C9BEC7.C25F113D@cis.net>
Source record: 92406

Hello,

I have Stainless Steel element Discone antennas up on a eBay
Dutch auction for $29.95. These are not only great for scanner
wide-band receive antennas, but are also good for Transmitting in the
Amateur 144, 220, 440, 900, and 1290 MHz. bands.

The Auction ends 3/12 9:40 pm cst.

They're at:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=277039497

This is a Dutch auction, which means no worries about being outbid at
the last moment, or the price sky rocketing because of bidding wars.
You bid you get one!

Be sure to check our other auctions and website for other great deals on
Scanner, CB, and Amateur antennas.

Thank you

AntennaWareHouse

Just to let ya all know I bought one of his Discones and it works SUPER! I can
pick up an Airport Tower located about 35 miles away which is better than any
ant I've used yet. Its a very well constructed antenna as well.

Is any one out there listening to motorola's apco 25 analog to digital modulation....If its not encrypted, wouldn't it be just a matter of hooking up a IMBE vocoder and a 4level fsk decoder to a trunk scanner or programing a motorola digital radio (xts3000) to receive the right system and talkgroup! Of course you would want to disable the tx. so that the system operator would not know your listening and disable your radio! Lets hear from you!!!!

There is no question that a Discone is the better performer. Where improper installations may give mixed results, the laws of physic are on your side if you go with the Discone.

There's a Scantenna sitting in the box in my garage waiting to go
up.The discone's in the attic,a 5 buck homemade ground plane will
kill it performance wise.If you aren't transmitting,the Scantenna
is by far a better performer.It's not as sturdy as the better discones
are though.

What would lead you to say that? A better performer how? All I can see as an advantage with a discone can transmit on the vhf/uhf ham bands. Please, enlighten us.

I thought I was answering a poll, not offering classes in physics.
However, in simple terms "effective aperture",and "broadband matching"
are two good reasons to lean toward the Discone. Where there may be
differences that are in favor of the scantenna on freq. that it is
optimized for. It cannot keep up over the entire range of freq. that
these antenna cover.

In your previous post you said:
W6RCA has been reported to Hollingsworth for assisting in the illegal
modification of type accepted radio equipment.

I had a tech. work on a highly modified TS-520 once, and he told me
that to clear his responsibility for working on it, was to clearly tell
me that operating the equipment on 11 meters was illigal. Now how in the
hell do you get in trouble for simply pointing the way to the mod. sheet
posted on the web? Yeah, we need more people like yourself on the air
and on the web! Crawl your dumb ass back under the rock from which you
came troll and think with your OTHER head.

5703. Question About Homemade Antenna

Newsgroup: rec.radio.scanner
Date: 2000-03-11 00:00:00 UTC
From: Mooker <beasfer@hotmail.com>
Message-ID: <vgzy4.152$p7.75710@news-west.usenetserver.com>
Source record: 92435
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Hi, I have a question.

I'm interested in constructing an antenna for the 40-50 MHz range. I bought a solderless BNC for RG-58 coax connector from Radio Shack (278-185), and attached it to 7' of coax. I also removed the shielding from the last 1" of the coax (as mentioned in Police Call). To make a long story short, it didn't work at all.

Can anyone give me a recommendation of how to build an effective antenna for this range? On www.strongsignals.net someone mentioned this technique that I tried and how you could use different lengths of wire to customize your antenna for whichever frequency range you would like. Which brings me to my second question:

Is there a chart anywhere that lists the frequency range and optimal antenna length for that frequency?

Any help would be appreciated.

Thanks,
Mooker

5704. Winradio Autostep File

Newsgroup: rec.radio.scanner
Date: 2000-03-11 00:00:00 UTC
From: Bud <Twenty4Pack@Yahoo.Com>
Message-ID: <ntglcs8pus4frhfreq4ppj6r2bovnf90sv@4ax.com>
Source record: 92436

All,

I was checking some old messages the other day and found a
reference to a file that customizes the Winradio auto step settings.
Looks like something interesting that Bill Cheek worked on in 1997 or
so. Couldn't find his original .csv file, so I entered and formatted
his post to work with my Winradios. Bill suggested you rename the
current file before you copy the Autostep.csv to your WiNRADiO
directory, but I didn't have a problem overwriting it. There was very
little data in my original Autostep file, so this works real well for
me. I'd originally posted this to the scanner related groups at
Onelist, but for some reason I couldn't access the attachment to see
if it went out correctly & ended up posting the same thing six times
or so.
Even though the file is only 12Kb, binary posts to the newsgroup
are flamed, so I'll email it to anyone interested.

Here's the Deja News link to Bill's original post:

5708. SMA to BNC Adaptor Review

Newsgroup: rec.radio.scanner
Date: 2000-03-11 00:00:00 UTC
From: Soy Bomb II <mm11720@navix.net>
Message-ID: <8aep5j$so0$2@iac5.navix.net>
Source record: 92440

Just received a SMA to BNC connector from gulyas@netzero.net

For those of you that are not familiar with this product it is a SMA to BNC connector with a wide rubber boot on the bottom of the connector. Due to the boot it does not strain the housing of your scanner the way a standard adaptor would. The boot hugs the bottom of the BNC antenna and the housing of your scanner. With this thing your scanner would have to suffer such a wack that it would break off much of the top of the scanner housing not just around the adaptor mount like would take place with a normal adaptor. Not very likely to happen and if your scanner receives such a blow you would likely have a bigger problem than just the cracked housing.

The black rubber boot is glued on and seems very solid, this is not a guy just taking an normal SMA to BNC adaptor and putting a small piece of black hose around it. It is a true one piece unit.

This thing functions fine, due to the boot it makes the scanner to antenna connection much more sturdy and it just looks right. (Being a black boot and the fact that it is about the same diameter and color as your normal BNC antenna). With a BNC antenna hooked to it it almost disappears and it looks like your antenna was a straight SMA antenna. Shipping was incredibly quick, the quickest I have ever seen and the price is very reasonable. I plan to buy more.

Right now I have it hooked to an Icom R2 and it makes a BNC antenna look like a factory SMA antenna, that and the fact it does not put much stress around the connector is reason enough to buy one in my opinion. It's important to say I have no affiliation with this guy at all other then being a happy customer. This is the best accessory I have ever bought for my R2 for under $50.00 (and no they don't cost nearly that much, less than $15.00 if I remember right). I bought a factory SMA to BNC from Icom at a higher price and it is not half the adaptor this thing is. For anyone interested in protecting you investment, having a factory look and using a BNC on a radio like the R2 that has a SMA connector I see no way you can go wrong with this guy's product. In my book it is the only real choice in a SMA to BNC adaptor.

> ideas about this beacon?
It's a "weather balloon" (Radiosonde). It's yours to keep. The National Weather Service no longer wants them back (they used to attach a return-mail envelope to them). Most likely you have one that uses LORAN (cost <$100) and transmits back to the weather service office it was launched from. It is far more economical to treat them as disposable then to try to test, repair and re-use. They are carried aloft twice a day by a latex balloon which takes it to 5-30mb (which is about 120,000 ft if I remember correctly). The (helium) balloon starts out about 3-4 feet in diameter, and expands to 10 times that at the top of the flight. The frequency can be adjusted (by a few mhz) so it doesn't caused interference. The battery is activated by exposure to air and water and is probably dead by the time you read this. The rest of the unit consists of a transmitter and control board, an antenna, and a thermister probe that sticks off the unit.
I'm guessing you live east(ish) of a major city - which is probably were the National Weather Service office is. (The actual location depends on the winds in the atmosphere)

Only if you are a 20 WPM Extra. Of the several HF rigs I've owned since the Novice Enhancements, every one of those which came from an Extra had been modified to run CB or other unlawful freqs. In one case, an estate sale, I had to buy replacement crystals to modify the radio BACK to ham (the 10m band had been changed to 11m), and his widow said that that was the only radio he ever used.

Broadband Digital Group is starting a totally free internet service
using the new DSL technology. You get FREE unlimited high-speed (DSL)
Internet access over your everyday phone line - does not interfere with
regular phone use which lets you talk and surf the net at the same time.

The service is always on, which that means to you, no more waiting on
busy signals and no more dropped connections. Surf the Internet at
speeds over 50 TIMES FASTER than conventional dial-up.

To sign up for totally free, high-speed, DSL internet service, just
follow the following link. When asked "Where did you hear about
FreeDSL" just select "Friend" and type in "rsc14@yahoo.com" (without the

quotes) as the email address.

Click on this link:
http://i.winfire.com/s/isapiEng.dll/wf.exe?cmd=rl&510,37168&.exe

As a Broadband Digital Group FreeDSL subscriber, you will receive: -
Free, unlimited high-speed (DSL) access over your regular phone line.
- A free e-mail account accessible via POP3 software and the World
Wide Web.
- A free high-speed FreeDSL modem*.
- A free copy of the revolutionary FreeDSL Browser Assistant by
Winfire.
- First access to future high-speed (broadband), full-service
oofferings as they become available.

Funding is provided by advertisers so there is absolutely no cost to the

customer. All that Broadband Digital asks is that you download and use
their new browser assistant, FreeDSL Browser Assistant.

The FreeDSL Browser Assistant, developed by Winfire, is a free download
that works with your Web browser to make getting information on the
Internet simpler and faster. Small enough to fit into the Windows Start

bar, the FreeDSL Browser Assistant provides one-click desktop access to
hundreds of personalized Services and Content Providers.

Just sign up and download the browser assistant and that's it.
Sign up today!

* If you refer 10 other people to this awesome service, you'll get a
FREE DSL MODEM!

Try unplugging and reseating the connectors in the radio first. If no help, remove PC-3, the cpu card and reheat all the solder joints. Inspect your work carefully using a magnifier. New cpu's are still available from Radio Shack if nothing else seems to help.

Source record: 92257

Hi all,
I don't post many questions but I was wondering of anyone has any knowledge of the Panasonic KX-TC1800B 900MHz digital spread spectrum cordless telephone. I have recently purchased one and the operator's manual indicates that it operates in the 905-926 MHz range. I am concerned about security. I searched this range and was unable to pick up any "readable" signal. I know that some phones advertise that they are DSS but some only do this one way, the other signal being easily copied on a scanner. Is this model 900 MHz digital spread spectrum both ways (from the base to handset/handset to base)? I know that if it's DSS both ways it can't be picked up via scanner but I'm wondering if it can be picked up in one of the directions. Any input would be appreciated. I remember from previous posts that there has been some false advertising on the part of Panasonic and other cordless manufacturers. Thanks. If you post to the newsgroup please also send a separate e-mail to me at spectra291@aol.com as I may miss the response on the newsgroup. Thanks again.

Brian (concerned consumer)

Does anyone know how the trunk ID storage is configured? Is it ten banks of 10 like the 245?

I also curious about the alpha tags. Is it two lines of text per channel or is it a bank tag and a channel tag? How does this apply to trunk ID's?

One more thing I'll throw out there is this. Since the radio requires programming of Motorola data channel freqs only, is it safe to assume the remaining 40 some channels in the bank can be used for other stuff?

I know the radio isn't even out yet but if anyone knows I'd sure be interested in knowing.

the formula for the length in feet of a half-wave dipole is to divide 468 by the frequency in MHz. Say you want to cut the antenna for 43MHz, which is near several operating frequencies for the highway patrol. 468 divided by 43 = 10.88ft, round it to 11 feet. Cut this length (half-wave) in the middle (dipole) and run the coax feed line in from that point. You'll want to mount this antenna vertically.

You might want to try a quarter wave dipole, which is obviously half of the above, but the formula is 236 divided by (f/MHz) = length in feet.

I have just scanned and posted the 24 page Seattle Citizen Access Plan. I feel this plan is a positive policy preservation approach to keeping key parts of todays public safety communication open to the public. It is NOT a plan directed exclusively to the "media" but more precisely to the public which is at it should be. While not perfect, the plan nobly addresses scannists directly and frankly, and is an ideal model for other agencies seeking to redeem their closed policies.

The plan is available for review at the following URL:

http://members.xoom.com/tdave365

Many people hate it because it allegedly does a very POOR job of tracking a
busy motorola trunking system.

5755. PRO-28 realistic, is it a bearcat BC60XLT?

Newsgroup: rec.radio.scanner
Date: 2000-03-12 00:00:00 UTC
From: Technics <elliot_t@theglobe.com>
Message-ID: <38cb829b.0@news.bluep.com>
Source record: 92323

Hey!

I have a read a few old archived messages that seem to indicate that
Radioshack Realistic PRO 28 is infact the same as Uniden Bearcat BC60XLT.
Hence the modifications for the BC60XLT (that follow) could work on
realistic, yet inside the PRO-28 lives a UC1730A (6H1) UNIDEN signal
processor, the BC60XLT has a UC1782 (AE65H). Anyone know if the chip is pin
compatible or if their is another mod for the PRO-28 that would suit?

Title: Modification of UBC60/AE65H:

Motivated from so much modification-dates I've tested some "litle"
modifications on my Uniden 60-1 (AE65H).

In originate state it captured the freq.: 66-88, 137-174, 406-512 MHz
it has 30 Channels and a scanspeed of 10 Ch./sec.

My first step of mod. was to expand the freq-range.
I thought that I could minimise the gaps, but I've found that following
pin of the CPU (UC1782) have the following effect:

Pin 79 to ground: 108-137
Pin 80 to ground: 806-869 & 894-956 !!!

I don't know if the on the display shown freq. are realy received, because
til now I've nothing heard... but I'll still listening :-) (Jet I know: the
freq.s are not received, only the scan-process is on the Display shown...
:-( ) But perhaps there is someone of you, who has the schematic of the
UBC80,
and will posting the part of the upper-board (the freq-selection-board)...

The second step of mod. was to disconnect Pin 78 from the CPU and the
effect was, that the lower freqs. was switched for us range: 29-54 MHz.

The third mod. was to bridge Pin 1 to Pin 2 of the CPU.

Now the scanner has 80 (!) channels!!!

Be carefull when solderin on/near the Pins of the CPU,
because it's a sweet SMD...

Now all mods in short view:

1. Pin 79 & 80 to ground to get 806-956 MHz [869-894] but no receiption!
2. cut Pin 78 to get 29-54 MHz instead of 66-88 MHz
3. Pin 1 & 2 connected together to get 50 channels more!

Anyone seen any datasheets on the Uniden UC1730A, I have searched long and hard, or a mod for the PRO-28 specifically.

Regards,
elliot_t@theglobe.com

Now why be so harsh about that. I thought that they were talking about scanners and that would apply???

Anyway, in Victoria, Illegal for anybody to earn from listening to a scanner, Illegal to posses scanners for criminal acts.

Jim,
Contact Gerry at G&G Communications in New York, he is the only person
I know that has a "replacement keypad" it is not the origional keypad,
but it will work. You may need to mount it outboard, but it gets the
scanner working again. As far as I know this is your only option unless
you can find a junk 3000 to steal parts from.

Either way would work, but if you were going to transmit, then you would need half a wavelength.

I think you would be real suprised at how many transmissions the Pro92
misses on a fairly busy Motorola System. I ran the same comparision as
decscribed in the February issue of Monitoring Times (Pro92 vs BC245xlt)
and found that the Pro92 was missing 30% of the transmission during the
daytime hours on a Motorola System here in Santa Clara, CA.

Just curious if you've ever run a comparision between the Pro92 and the
BC245xlt (or even BC235xlt/Pro90)?

The only features that I really liked on the Pro92 was its ability to
decode CTCSS and DPL instantly (no other scanner does this) and the
alphanumeric tagging.

I have a Pro-2050 Trunker and I have 3 Antennas on it. An Old CB Radio Antenna with a converter from the old type of wire to the BNC, I have the original Telescoping Antenna, Which doesnt get hooked up to any Adapters, and a $10 Antenna I got that Combines in the same jack as the Old CB Antenna.

My First Question - Are 3 Antennas Better than 1?

Second - How Much loss do the adapters make?

Not for transmitting, which I assume is your purpose in uing a CB to
begin with. If you try it, you may damage your radio.

Hola a todos, os escribo para haber si alguien me puede echar un cable.
Tengo una duda: he instalado una antena de la banda n�utica de VHF en mi ventana de casa, pero la he puesto sobre un soporte de acero inoxidable. Lo que quiero saber es si el acero inoxidable hace masa o no. Digo �sto porque las antenas con base magn�tica (por ejemplo las de m�vil) no imantan en el acero inoxidable (tiene que ser acero o hierro) y entonces al colocar un soporte de acero inoxidable, no se si realmente me est� haciendo masa o no.
Una vez visto �sto, me surje otro problema, si el acero inoxidable no hace masa, como puedo poner la masa a mi antena, puesto que es de un material pl�stico completamente y sus tornillos para sujetarla a una base tambi�n son de acero inoxidable.
A lo mejor tengo bien instalada la antena y no lo s�. Agradecer�a que alguien me recomendara sobre el tema y me ayudara a tener la instalaci�n un poco mejor.
GRACIAS

Hello all. I have an RS Pro 2004 with problems and need knowledgeable advice! There is no audio, and nothing showing on the display. Keypresses on the keypad produce audible beeps, there is a backlight, and a very slight detectable hum from the speaker when the volume is turned all the way up. I have powered it down, removed the backup battery and reset the processor but no joy. Ideas? I have heard of solder problems in these units before-----should I try retouching the board or is this just processor failure? And are these chips still available?

Thanks in advance for the help.

You need to get the frequencies first.
Get ahold of an 800MHz scanner (try one out at R/S) and punch in the
frequencies. if you can hear voice, that cop was full of shit.
If they are not digital, you need the TrunkTraker II scanner - it goes
for 499 canadian at R/S.
Not sure exactly how to use it, but if you do a search on the net,
you'll find the info.

tx_mike@hotmail.com (Mike Davis) asked:
> ... any tips on building the cable for the radio?

The interface is a 5-pin PCB header (.025" square pins on 0.1" centers).
The mating socket is standard (RadioShack.com's Cat# 910-1471 is 25 cents,
plus 24 cents for 3 contacts), but a segment cut out of a DIP socket will
work just as well. The pinout is symmetric, with pins 1&5 (the outer ones)
carrying data in (to the radio), 2&4 are data out (from the radio), and
pin 3 is ground.

The cable connections are:

BC895 DB9 DB25
1 <= to radio 3 2
2 from radio => 2 3
3 <= ground => 5 7
(TR-CD-DSR) 4-1-6 20-8-6 *
(RTS-CTS) 7-8 4-5 *

* If you will be using a standard communication program, add the two sets
of jumpers in the RS-232 connector to simulate the normal control signals.

The comm protcol is half-duplex, 9600 baud, 8/N/1. Commands to the radio
should be terminated with a C/R only.

Must we go thru it all AGAIN? Have we not determined that this is what the original poster (be it John or someone else) WANTS you to do?

I say this: LET IT DIE ALREADY!!!!! I don't care if "jmackey@usa.net" posts "John Mackey is God Incarnate", just let him rant, and let it go. In doing so, we all make the world a slightly better place. I simply can't emphasize it enough. I've seen far worse trolls make hardly a ripple in an online discussion group because no one responded to it. Yet a.r.s. and r.r.s. constantly fall victim to the same pissing matches over and over.

Remember: Calling the FOOL a FOOL only makes the FOOL act more FOOLishly to remain in the public eye... Ignoring the same FOOL places him in the obscurity that he so richly deserves. Let him prove himself the FOOL by continuing his childish behavior when NO ONE ELSE WILL.

Of course, I can't tell you what to do. For all I know you very well may enjoy these endless debates more than John does! I have admit that sometimes I wonder just who is having more fun disrupting the whole group, you or him. It's really irrelevant to me, should you choose to continue this online train wreck, you will not be further chastised by me...

But if you really want to get his goat.. if you really want to make him scream... if you really want to hit him where it hurts... all you need to do is ignore his every word, and make like he never ever existed on the face of the earth.

Trolls hate that. They really do.

-Phil

from all those Big Macs you ate before
Bed? Wife don't want to "play"?
Bored with all those boring stand-in's
guest hosts on the Art Bell Show...?

There is an alternative!!

Tune that radio down to 3.850 LSB for the hottest
political topics with K1VDQ, AA8DP, WB2CLN, N1RAJ
N4SKD, KN4CF...and a whole host of others! The show starts
at around midnite (sometimes nightly) and runs
often till 2 or 3 AM.

Last night's show ran the following HOT topics:

* Comments by a "budding" Social-Worker in 3-Land
that leaned somewhat left-of-center... (and the FUR FLEW!)

* Discussion of did the Nazi's sanction the Roman Catholic
Church as the "official and acceptable religion" of WW-II
Germany...

* Why race-mixing is a threat to the "Historical European
Heritage of America and the ideals Founding Fathers"...

* Why the Bible does not sanction interracial marrage by AA8DP..

Folks, I kid you not - this freq. is >BETTER< than CNN's Crossfire
program, The McLaughlin Group, Face the Nation and Firing Line
if they were all rolled into one!!!

Join you hosts on the Right: AA8DP and KN4CF
Join your hosts on the Left: K1VDQ and WB2CLN
And in the Center we have: N1RAJ

3.850 IS MUCH MORE ENTERTAINING AND POLITICALLY SUBSTANTIVE
IN IT'S DISCUSSIONARY DISCOURSE THAT 3.950 WILL EVER BE.

Be sure to TUNE IN and watch Art Bell's ratings DROP even further
than they are now....

In article <38cc1423.84368781@news.windmill.net>, zappa
<zappa@zappa.net> writes

>Anyone know if there is a discriminator tap on the AOR 8200

The discriminator is available on the socket on the side of the AR8200
that is also used for PC Control.

If you purchase the OS-8200 "open" cable the discriminator is available
on they grey wire.

Since this unit has been out for a while, I thought some of you, who have used them, might be able to give all of us some idea of how well they work for you.

Are they reliable and accurate?

Will they work with less than perfect signal-to-noise ratios?

If so, just how poor of a signal is usable?

Do you find a difference in performance when using audio coupling versus a direct connection?

Is the audio input level critical or not?

Also, does anyone have any suggestions on other units that will give good/better results?

Thanks,

Bill

If they're all the same diode, any one is the right diode. It just depends on how many you need.

> I have looked at these diodes and there are many color bands on the
> diode which makes it extremely difficult to identify the cathode end.

Are you sure you're looking at diodes? The diodes that I have obtained from RS are usually goldfish-colored with a prominent black band at the cathode end. Some diodes are black with a silver cathode band, but the 1N914/1N4148 should be the orangey color.

Hi,

>Need any info on AOR 2800 base/mobile scanner

You are going back to around 1993. The '2800 was a base/mobile version of the popular AR1000 receiver and housed in a "flatish", plastic case as was used with the AR950 and AR2500.

The AR2800 had the addition of a manual BFO for limited SSB reception on the HF bands over the handheld AR1000 but other than that had identical features and operation was just the same. Some models were fitted with an internal Nicad pack for portable operation.

>ranges and I would like to buy just the replacement antenna (not the radio
>it comes with) from a US distributor. The antenna according to the review is
>called the WS1000. Can any of you experts tell me where to find one in the

the "WS-1000" is the receiver itself not the antenna that came with it
(there was also the WS-2000). Both these receivers were manufactured by
Standard in Japan and distributed under their own "badge" as the AX400
and AX400B/E.

I'm not sure if you will be able to find just the antenna but if you
might try a Standard distributor who might be able to assist.

Maybe there OUGHT to be free low power broadcasting by people who have
reasonable technical proficiency. A lot of high power domestic U.S.
broadcasting now all seems to be owned by conglomerate central and is
broadcasting the Demographically Correct Satellite Network and other
competition for Sominex.

Of course, you can always run a Shoutcast server or RA server on the
'net. I don't think the @home cable modem ISP will allow it but it
shouldn't be too hard to get a reasonably priced account with similar
bandwidth which will.

But rumor has it that, right now, broadcasting is NOT a legally
acceptable use of the ham bands.

5801. QUIXTAR EN EUROPA

Newsgroup: rec.radio.scanner
Date: 2000-03-13 00:00:00 UTC
From: Ismael <stone@retemail.es>
Message-ID: <6Lbz4.21968$ys3.138366@telenews.teleline.es>
Source record: 92220

Quixtar, un negocio serio y de futuro, es una empresa que ha contratado a Microsoft y a IBM para gestionar su webpage.
Abrieron su mercado en EEUU y CANADA el 1-9-99 y en 100 d�as han vendido 100 millones de $.
La noticia es que pronto, para ser mas concretos el pr�ximo oto�o empieza sus actividades en Europa, en 27 pa�ses y uno de ellos es espa�a.
Es una oportunidad increible de negocio sin riesgo de inversi�n, para que cualquier persona con ambici�n empresarial pueda crear su propio negocio de e-commerce.
Seg�n Bill Gates, es el proyecto de Comercio Electr�nico mezclado con distribuci�n interactiva (MLM) mas importante que jam�s haya sido creado para la web.
De los 100 millones 30, han sido repartidos con los propietarios de negocio independientes.
Asociados con todas las empresas mas importantes del mundo para distribuir sus productos, Quixtar exige a estas empresas que si quieren entrar a formar parte de quixtar, pongan todos sus productos a su disposici�n, sino es as�, quixtar no les permite asociarse a ellos, para usar su red de distribuci�n.
�C�mo funciona? pues eso lo puedes ver con mas detalles en http://www.quixtar.com Pero para adelantarte algo se alcanzan ingresos de nivel de royalties, o para ser mas claro, derechos de autor.
Para que nos hagamos todos una idea, recibe del orden de 20 a 30 millones de visitas diarias, y hoy en d�a venden 2 millones de $ diarios.
Estos datos est�n sacados del libro Quixtar Revolution que lo compr� en Amazon.com
Se rumorea que una de las empresas que se est� asociando con la versi�n europea de quixtar es El Corte Ingl�s....
Una de las empresas asociadas se llama Catalogcity.com esa empresa tiene mas de 25000 cat�logos, y es la empresa de venta por cat�logo mas importante del mundo, con mas de un mill�n de productos para comercializar.
Pero si esto realmente te interesa no esperes a que llegue oto�o, podemos comenzar ahora mismo, ya que esta empresa tiene la experiencia de mas de 40 a�os por cat�logo en mas de 82 pa�ses y territorios en todo el mundo, y pone esa experiencia ahora en internet.
�Funciona? Pues yo creo que los n�meros lo dicen todo, lo que tienes que ver es si funciona para ti.
Si tienes inter�s en saber como empezar ahora mismo para adelantarte y llevarte el gato al agua puedes contactar conmigo. Pero por favor, esto realmente es algo serio, es decir para desarrollar esto tienes que ser una persona con visi�n de futuro y mentalidad empresarias, sino es as� no perdamos el tiempo nadie.
Me puedes contactar en mi e-mail
stone@retemail.es

Mi nombre es Ismael.
Te mando un saludo y por cierto visita la p&#65533;gina http://www.quixtar.com
antes de contactar conmigo.
Mis mejores deseos, Ismael.

> Anybody know about a R/S Pro51? Are they any good?

I like mine. I'm not up to date on the newest scanners (this is my newest model), but I like it. I like the scan speed...fast. The biggest problems are image rejection (I often hear aircraft in the VHF hi area) and the inability to turn off the key-press beep. If you can get it at the right price, it's probably worth it.

A small detail - that parts list is for a 4-channel xtal scanner made by GRE in 1986. I suspect the enquirer was asking about the 1995 digital controlled scanner made by Uniden. Radio Shack apparently believes in recycling, including product names.

This is an issue of concern for both libertarians and radio amatuers. Why should the FCC or the senate have the right to regulate the airwaves? Any eletronic device capable of broadcasting can be made capable of broadcasting an encrypted signal. I went through the red tape and got my no-code tech a while back and it was interesting, but it should not have been required to obtain a liscense. Lets not forget the type of lmits on free speech the FCC imposes on HAMS. Its rediculous. Any other opinions?

I think you will find on 2M and 440 that when the machine controllers
started talking more then the people, people started turning off the noise.
I think that VHF UHF freqs suffer from noise pollution

But if the agency you're monitoring changes control channels regularly,
you'd still need to program all the frequencies. Sounds like this feature
would be almost useless in my area.....

5828. FS:CUSTOM MADE SMA-TO-BNC ADAPTERS

Newsgroup: rec.radio.scanner
Date: 2000-03-13 00:00:00 UTC
From: gulyas@netzero.net
Message-ID: <8ahhu0sqa1@nnrp1.deja.com>
Source record: 92273
Cross-posted to: rec.radio.scanner,alt.radio.scanners,rec.radio.amateur.equipment,res.radio.swap

Do you have a need for an sma-to-bnc antenna adapter that is custom made to fit your H.T. or scanner radio?

Adapter allows you to:
Use the more popular and wider selection available of bnc antennas.
Quickly change your antennas to base,mobile,or style use.
Help to prevent chassis connector wear or from coming loose due to always having to change your antennas.

Adapter features:
Gold contact pins for best conductivity.
Low profile size with a rubber covering for a factory antenna look.
The rubber base seals to the top of the radio for moisture and dirt protection,plus providing additional antenna support.
No need to remove once installed to make any antenna changes.

$11.95 + $1.50 S+H (Sizes to fit most radios)

For complete information and to view a photo of the adapter go to:
WWW.QRZ.COM (SWAP)(ENTER KEYWORD SMA TO SEARCH CLASSIFIEDS)

OR EMAIL: gulyas@netzero.net

I welcome any questions or comments at my email.
Thanks for looking at my posting.

I forgot to mention that the UBC3000xlt has full 800 MHz and 30 kHz professional mod by Javiation. It also has a very nice case.

Realistic Pro 2006, original box, ant, manual, BNC to RG8/ 11 coax
adapater. (Don't need the "extra" features anymore.)
$260

Will consider trade- Bearcat 278CLT (not refurb- to replace above)
Will accept as trade + difference.
Might consider a 760XLT (if this is the one with a metal cabinet).

I don't any of the answers to your questions, but I'll toss out my opinions... :-)

On Sun, 12 Mar 2000 22:34:48 GMT, chuck@nospam.latraffic.org (Chuck Rowe) wrote:

>I also curious about the alpha tags. Is it two lines of text per >channel or is it a bank tag and a channel tag? How does this apply to >trunk ID's?

I _think_ that what I hope is that the first line is the bank tag, and the second line the channel tag. With the ar8200, I never see the bank tags during scanning so I have to include the type of service in each channel name, which is a waste of time and space to me. I.E., if I put all of San Jose police in one bank, I would label that bank "San Jose PD". But with the ar8200, I have to include SJPD or something to that effect (wasting 4 precious characters) so that when the scanner stops, I know from the channel tag that I'm listening to San Jose PD.

>One more thing I'll throw out there is this. Since the radio requires >programming of Motorola data channel freqs only, is it safe to assume >the remaining 40 some channels in the bank can be used for other >stuff?

My understanding of this is that the scanner will program the other channels into the bank for you, not that you don't actually need those other channels programmed. But that's not based on anything other than "how I thought it might work".

You did not mention 5/8's wave...

The lengths mean a lot more to transmitting than to receiving... But, the longer "tuned" the better. A full wave antenna would be best, but when a wave length can be 6 meters long or more (for most scanners, even longer for shortwave receivers), this would not be plausable.

In transmitting, the varying antennas have differnt properties and gain levels...

I do not remember them all, but a 1/4 wave antenna's radiation pattern is mostly directly upward from the end of the antenna, and the gain level (I THINK is 0db)... A 5/8 wave is something like 9db gain...

Again I do not recall the numbers on these things, but it is a lot less critical on the receive as it is on the transmit.

Hi Bill,

The radio is supposed to both at the same time. Well, in all correctness, it's better to say that it will do "one at a time" but very FAST such that it seems like it's doing both modes simultaneously. The radio will switch automatically from one mode to the other.. looking for activity. It's reported not to have that ding-dong 5 sec delay from trunk to conventional that the 245xlt was plagued with having. Hope this helps!

Regards,

HO

Hi Tim.

I have repaired 4 2004's that exhibited your same symptoms. In each case, it was a cold solder joint on Q32, the 8 volt regulator. It is mounted on the lower left frame, as viewed from the top front. You'll see two TO-220 devices, IC8 and Q32. The "top" one, (mounted closer to the back of the unit) is Q32, the 8 volt regulator.

I'd flip the unit over and touch a hot iron to the solder pads of Q32, and see if that didn't bring it back to life.

5846. 1N4148 Diode for a Pro-43 Mod... Help!

Newsgroup: rec.radio.scanner
Date: 2000-03-13 00:00:00 UTC
From: Sinister <togepi152@hotmail.com>
Message-ID: <8ai57g$9kq$1@nnrp1.deja.com>
Source record: 92291

Hi fellas,

I need to obtain a 1N4148 or 1N914 diode for a modification I am doing
on a PRO-43.

The problem is that Radio Shack has four different catalog numbers
for the same diode.

#276-1122.......package of 10 - $1.19
#276-1620.......package of 50 - $2.29
RSU #11318615...each diode at - $0.49

Can anyone tell me which is the right diode to get. T

Also, the cathode end is supposed to be identified by a color band.
The guys at RS are of no help. I don't know why they work there.

I have looked at these diodes and there are many color bands on the
diode which makes it extremely difficult to identify the cathode end.

Is there an easier and foolproof way of identifying the cathode end.

Many thanks for any info.

Message-ID: <scp8g8dla5n19@corp.supernews.com>
Source record: 92292

Bill, there are 4 that I know of. None are perfect. All can be had on the web.

The best I've seen so far is WinScan. Go to http://mghusa.com/products/winscan.html It's $60 for the full version (you can DL a 30-day demo)

The one I'm using at the moment - because I'm a tightwad - is BC245INT, written by a French-Canadian guy who has some trouble with English. There is no manual and his responses to inquiries are a little tough to understand, as are some of the controls on the scan program. I haven't yet figured out, for example, how to DL or UL freq lists yet, although I believe the capability is there.

Another app I've had trouble with but which seems - and I'm told IS - powerful is ScanCat at www.scancat.com. It's made to handle many different kinds of radios, and there are several features on there that the 245 can't do (like spectrum analysis), so that's a little strange. Also, I never could get it to control my radio right at all; had trouble with everything. Got some response from the programmer but he was talking about some known problem that they had fixed on the commercial version that may not yet have been made to the demo. Whatever. I got lost and this app is $100 for the cheap version anyway. Again, you can DL a demo copy for free.

There's also Radio Manager for Windows at http://www.interplaza.com/bensware/rmbc895.htm This looks to come with a companion program, Frequency Manager. This is another program I couldn't get to work. It looked like it might be syncing up but the front-end was so complicated I couldn't make heads or tails of it. Who knows, it might just be me!

I believe there was another program I tried called Softrol, but I'm not finding it now, so I can't give you any good feedback. Most of these programs will control an 895, too, I believe.

Let me know if you learn anything else!

I live in Vancouver, BC, Canada where, much to my disappointment, the police use 800 MHz EDACS radios. According to one cop I spoke to he says it that while it is completely digital (trunked and encrypted), local media seem to still be in the loop and are able to respond to calls.

Please, what can be done? Is there ANY way to to monitor the police in this situation short of stealing a police radio?

Welcome to the Auxiliary Communications Service Newsletter,
developed by the ACS Training Unit of the State of California
Governor's Office of Emergency Services. Please visit our ACS
Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in
emergency communications closer together by sharing common
ideas, and by introducing new technology into the emergency
services community. All individuals with an interest in
emergency communications, disaster preparedness or helping the
community at large are encouraged to participate here in an open
forum.

You will find a virtual community here, with representatives
from many different organizations with the same common goal:
emergency response. We encourage everyone, from whatever
organization you represent (or just yourself!) to bring us your
ideas, suggestions, concerns, manuals, handbooks, or opinions so
that we may share them with the group. To those of you who have
just joined us, welcome aboard!
.....

From the Mailbag:

From: Bjosuweit@aol.com

Dave,

Just a note of support for mentioning topics that don't always seem to
fit emergency communications. In CQ VHF I reported on Integrated Process
Management as it related to a plane crash and how hams can use it to work
together. In April CQ I'll touch on Project Management for a communications
van, and in an upcoming issue we'll talk about Risk Communications.

73s
Bob Josuweit, WA3PZO
Public Service Columnist
CQ /CQ VHF

.....

This week's EMCOMM Bulletin:

EMC227 Internet RIMS
To: Emergency Communications Units - Information Bulletin
To: Emergency Management Agencies via Internet and Radio

By: Auxiliary Communications Service (ACS) of the
California Governor's Office of Emergency Services

EMC227 Internet RIMS For release 3/6/2000

Bulletins 210-214 in December l999 covered aspects of RIMS (Response Information Management System) and some details of access by counties and cities. Since then there has been a major change in the way the system is accessed. Instead of direct telephone connect it now uses the Internet.

At the time the prior bulletins were written the system was based on dialup RIMS connections. OES has developed and implemented an Internet version of RIMS. Users of the internet version have the same functionality as the regular users had with the dialup system. However, the internet application does NOT require Lotus Notes and can be accessed from any terminal that has internet access. Accessed that is, by those authorized for access by State OES with a system recognized name and ID. Currently this is called "NetRIMS", although that will change soon to just "RIMS".

RIMS is a tool that State OES uses for managing and archiving the data that is generated in connection with an incident, such as a diaster. It is also used to communicate with other agencies and governments, such as the Counties (Operational Areas), Special Districts, California Department of Forestry, Law Enforcement and Fire Response Agencies, FEMA, California Utility Agencies and others.

Utility responders that have participated in the California Utilities Emergency Association (CUEA, Inc.) EOC training have been trained in the use of RIMS. Data (information) received from the utilities during emergencies is summarized by CUEA responders and then put into RIMS.

Each Operational Area in CA - a County and all jurisdictions - other agencies and some utilities have a RIMS terminal that is a dedicated Lotus Notes server, or they connect via telephone to State OES's servers in several locations in the State.

Technical requirements for this new system are these:
A Pentium II, III or Celeron computer 166MHz or better
32 MB memory
28.8 kbps modem or better
Internet Explorer 4.0 or Netscape 4.5 or newer and an ISP capable of supporting 28.8 kbps or better

To access the system go to www.oes.ca.gov and select the NetRims area. For governments and agencies that have access their ACS Officers should discuss with their Coordinator how they can also obtain access. At State OES Communications Centers at Sacramento and the three OES Administrative Regions, the ACS unit has one or

more terminals dedicated to NETRIMS 24 hours a day.

To subscribe to bulletins, use the Subscription Services
web page at <http://acs.oes.ca.gov/subscribe.html>. If
you don't have web access, just send an e-mail message to
<mailto:emcomm-bulletin-sub@harthaven.com>.

- Ideas, suggestions and submissions for these bulletins are
actively solicited and welcomed. Please contact
cary.mangum@macnexus.org or cary_mangum@oes.ca.gov

Bulletins are on the ACS Web page: http://acs.oes.ca.gov -and a
Landline BBS: 916-262-0856 (graphical & standard interface); and
a FTP Archive: ftp.ucsd.edu/emcomm
.....

Please let others in the emergency services field know of the
newsletter, and encourage them to join... If you have opinions,
suggestions or written material that you'd like to share with
the group, let us know. We're always looking for new ideas and
suggestions that will benefit everyone.

See you next week!

WTB Yaesu Ft 8500 Control Head
My head and mic where stolen, I replaced the mic but need the control head to restore the unit back to usablility. Perhaps someone has a head possibly left over form a unit that was stolen from them? I hope not, I don't wish that on anyone but that's probably the oly way I'm gonna run into one.

Email me if you have one FS

Thanks, 73's

Well, you're right Mr Possum Belly Asshole, but...

Radio Shack sometimes has 'bulk' parts in the packs. Even a
moderately intelligent idiot can get confused. when the packages
appear to have different parts in them. And the parts may be
unmarked, or have 'house' numbers on them. Or didn't you ever
deal with parts other than the 'one ups' at full list price at Radio
Shack?

No it hasn't Will. Flat out wrong.

It WILL be lowered come April 15th. It has NOT be lowered yet.

But I have to agree about the bitching just to bitch. That won't stop
for years. If it weren't for the NEW and IMPROVED restructuring,
you'd still hear some bitching about 'incentive' licensing from the
60's. 30+ years and that hadn't gone away, so what makes you
think this will?

Mike

Phil - you head is SO BIG that you probably need special large sized
doorways
& hats. Your response was about FIVE TIMES the size of the post you are
complaining
about telleing the guy "LET IT DIE ALREADY" yet YOU stirred things up
worse than anyone!!!

You referred to YOURSELF (I) EIGHT TIMES!!! You then used
the word "FOOL" SIX times!!

And why were you dragging the alt.radio.scanner NG into this,
they had NOTHING to do with this thread.

Phil Smalley, you should follow your own advice &
"LET IT DIE ALREADY"!!!

"Phil Smalley" <psmalley@pop.phnx.uswest.net> wrote

Hello all,

Thanks to all for responding to my antenna poll it was very helpful. Now I seek some assistance with another problem.

I gained possesion of 50' of RG-8U, I only need about half of it. But i live in an apartment and will be eventually moving. Do I

A) Cut it to the length I need (I dont want to its very expensive)

B) Run it and coil the extra up,

C) Some thing else I havent thought of

Any input would be great

Tnx again Keller

Yeah, to registered non-profit organizations with type-approved commercial
equipment. This is NOT what we need.

I have one and like it. They use the Edacs system here and it works
fine.
I dont know anything about the Pro 92 but the 2052 does suffer at least a
little bit from a lack of sensitivity I use a 3db cell phone antenna and it
works
pretty good on that, an outside antenna would be the way to go with this
scanner.

Icom R7100 with Deltacomm Communication Manager Interface. The R7100 has been rated as the Cadillac of the scanner world. It is the top of the line.

R7100 Specifications:

o Frequency Coverage: 25 thru 1999.9999 MHz (No gaps)
o Mode SS (LSB, USB, AM (Normal, Wide), WFM, FM (Normal, Narrow)
o Power: 110VAC

Deltacomm Interface:

Check at their Web Site http://www.rfsignals.com/ . Current price is $349.00.

I am the original owner of the R7100 and Deltacomm Interface. The radio is a good 9 on a scale of 10. The scanner came from the factory with no gaps. I know of no problems with the scanner or interface. The radio has never been mobile and my shack is smoke free. The Deltacomm interface is the most robust I've seen yet. Both the software and interface are registered to me. The interface will not work with out proper registration. I have the original users manual and shipping carton.

I'm asking $1,250 for the scanner and interface. I will ship CONUS via USPS Priority. If interested, please e-mail me direct. Also, if interested, I will post pictures of both the radio and interface.

Thanks for looking,

Dan N4WEQ (Near Tampa, FL)

Oh, BTY, reason for selling, getting my General (yea I know, a General lite) next month and want to try my hand with HF.

Free speech is a right under any medium conrolled by the government.
Since the radio waves are (lets not even begin the conversation as to if
they are rightly so), people should have free unlimited use of them so long
as they don't infringe on other's rights to use them. This, broadcasting
200 watts on a 2m frequency to block everyone out of a repeater is clearly
not allowed under free speech. In this respect, I seem some reason to keep
portions of the broadcasting restriction, but this does still not justify an
FCC or licensing procedure for HAMs.

>
> >
> > 73 de Dave, NF2G, BSCJ

The problem you are addressing is a problem with Americans themselves, not
Free Speech. By the way, who would you suggest, should define which
Americans are mature and intelligent enough to handle free speech? And what
part of the constitution forbids the immature stupid folk from Free Speech?
Maybe the HAM test should have question about the constitution on it instead
of questions about frequencies and sunspot cycles.

Actually, my understanding is that the ECPA bans evesdropping on all
wireless phone conversations, cellular and cordless. It forces
manufacturers to block only cell freqs though.

You are right that it does not fit all models, at least the one I bought. He makes I think 5 different ones for different models that have SMA antenna connectors. Some of these five models of sma to bnc's he makes work on more than one model, some up to 5 I think. Yes the boot is larger than a normal connector and is made out of a hard but flexible rubber. You did hit it on the head, I sort of figured one size fits all with this kind of thing, I was wrong but did state the radio I was going to use it on and it fist like a glove. Let me see if I can find the email he sent me so you can see if it fits your model.

Here it is....

I am replying to you in regard to the adapter that you are
looking for to custom fit your Icom R-2 radio.
I make the adapter that you are interested in purchasing.

The following text and attached photo are what I have
posted at numerous news groups to provide information
and ordering instructions for my new design sma-to-bnc adapter.

NEW QUICK & SAFE WAY TO CHANGE YOUR H.T. ANTENNAS

Prevent damage to your radio's sma antenna connection due to
having to change antennas for base,mobile or to a different style
than stock antenna use. Adapter will take all the wear and tear,
instead of the chassis connector being subjected to wear or from
coming loose. You can now quickly and safely change the more
popular and wider selection available of bnc antennas and help to
protect your radio from damage,all at a low cost.

Adapter has gold contacts with a neoprene rubber covering.
A low profile design adds only 1/2"-to-5/8" depending on radio
model to the overall antenna length. The rubber base seals to the
top of the radio with no spacers needed to prevent moisture and
dirt from entering. The base also provides a positive support for
all your antenna applications and a better overall appearance than
other available adapters. There's no need to remove adapter once
installed to make a quick and safe antenna change.

Sizes to fit radio models:
Yaesu: VX-5, VX-1, FT-50-R
Icom: IC-T8A, IC-Q7A, IC-R2
Kenwood: TH-G71, TH-D7
Alinco: DJ-V5
Aor: AR-16

The following is a list of my part numbers and the
different radios they can be used on:

Part # BGA-76
Yaesu: VX-5, VX-1
Icom: IC-Q7A
Kenwood: TH-G71, TH-D7
Alinco: DJ-V5
Aor: AR-16

Part # BGA-77
Icom: IC-R2, IC-T8A

Part# BGA-78
Yaesu: FT-50-R

$11.95 + $1.50 (S+H) (Check or money order)
(Specify-radio-model)

STEPHEN G.GULYAS
706 LALOR ST.
TRENTON, N.J. 08610

Hope this information is helpful to you and once again
thanks for your interest in my adapter.

Talk to you later. S.G.G. KC2BHO 73's

Awww shucks... You could try to radiate some of the LO on the cell
phone band, --if it will go there. Frankly, that's what the FCC's
regulations in Part 15 are supposed to keep from happening.

My solution is usually much more civil: using your best social
engineering, ask the miscreant to please speak a little louder, you
weren't hearing all the juicy stuff...

And then be prepared to depart the train in a hurry ;-)

I read that, too. You'll have to tell me if it works. And I'm thinking
I've got those same people riding MY train!! Clueless, truly...

This "Stupid Scanner Trick" can be found (with many others) at
http://www.stupidscannertricks.com/cgi-bin/sst/db.cgi?db=default&uid=default
&view_records=1&ID=*

Here's the text:

Title: Hang Up Someones Cell Phone
Frequency: 824-850 MHz
Date: 09-Jan-2000
Category: Cell Or Cordless Phones
Description: Here's another interesting trick: if your listening to
someone's cell call and are within about 30 feet you can hang up their
call - First find their input frequency.. search 824-850 or whatever. add 45
MHz to see if you hear them on the output along with the phone line audio...
then if you add 10.7 to that frequency (if you have a radio shack scanner)
and punch it in it will generate a low power carrier on their phone ..
because the phone thinks it lost the cell frequency it will hang up in about
3 seconds. William [Here is the Cliff Notes version of this great trick.
Print this out and tack it to your dashboard for those long boring road
trips!] 1) Find input frequency 2) Find Output frequency by adding 45 MHz.
3) Add 10.7 (Ace, Icom, Realistic, Regency), 10.8 (Regency, Realistic,
Uniden) or 10.85 (Uniden) MHz to output frequency. 4) wait about 3 seconds
on that channel.

I have an Icom PCR-1000... "As new" ... w/box, software, warranty card, and manual. It was purchased just 1.5 months ago. I used it a few times, but, do not like tying up my only serial port on my Laptop to use it. I will include extra software, that I have found on the net, i.e.: PCR 1K, PCRscan, PCRscope, TalkPCR. I will double box it up, just as it was shipped to me.. $325.00 plus shipping

I used to listen to the radio system used by TVW7 in Perth to send out their reporters. They got really silly and started using police call signs instead of their own and their police scanner could be heard in the background. The SMA found out and they found themselves in hot water. Very often they would use the radio to give a general description of where they wanted a reporter and then send the exact address by pager.

I could also a studio link which was left open while in use. One day I could hear them practising the start of the news. At the time a baby had been found abandoned in a public toilet. The practise start to the news went like, "Baby found in toilet. Who was the slut that gave it up.", followed by laughter. The great thing about those links is that they are left open all the time they are needed so that you can hear all the chit chat and camera positioning instructions.

Yes that would be great ! no more toilet paper will save trees ! :-)
There are yet (since the 80's) chinese toilets that do not require
paper. A warm stream of water clean your ass and dry air finish the
job. A great progess for humanity :-))

1 - If it isn't directly related to Australia and RadioScanning then
it is off-topic!

2 - The FCC is a USA Federal body and has absolutely NO consequence to
Australia!

3 - Radio equipment wether TX or RX or TX/RX is bound by Federal
Legislation in Australia
and any state laws written are subject to those Federal laws.

4 - Under the Federal Legislation, It is a breach of the Act to
intercept any signal/message
received via radio equipment and use it directly for (sic)
punirary or financial gain.

5 - If you need to gain clarity as to why it is allowable or
acceptable for eg. journalists to use a
scanner yet not lawful for a criminal (say bank robber or house
breaker) to use one then I
suggest that you make contact with someone from the Australian
Communications Authority.
http://www.aca.gov.au/legal/index.htm

Read the act for yourself but understand that it should not be read in
isolation from the associated regulations and other legislation.
http://www.austlii.edu.au/au/legis/cth/consol_act/ra1992218/

Oh and if you wondered, I am being deliberately nice due to the fact that
you sound like a newbie!

I used the same arrangement with coax and a balun but found it lossy on transmit which wouldn't bother your situation. Each leg in feet should be (468/Frequency in Megahertz) / 2. I presently use this type of arrangement on my low band antenna for 160 meters, 75 meters and 40 meters horizontally polarized however I feed it with 450 ohm ladder line and use an antenna tuner which probably would not appeal to you. Good luck with it, Jim, K2JB.

It's only an AGREEMENT, not a law voted by people representatives.
Legally every country can decide to eliminate CW from ham exams. It's
not democratic that few people oblige ALL THE WORLD to learn CW.
There must be a democratic vote. I'm sure if there is a vote, CW will
die.

What level that may be is left up to the

Newbie whatever, if it makes you better that's OK, doesn't matter if your
new or old settle down a bit.

I can name a few other legislation tit bits that could be used to prosecute
journalists for using a scanner, many found under the summary offences act
or crimes act (talking Victoria here).

regards,

A typical system uses a maximum of 4 frequencies for control channel.
I think anyone's finger can handle that much programming.

On Mon, 13 Mar 2000 23:30:00 -0500, Don Edwards <don455@pipeline.com>
wrote:

Source record: 92110

When I read this back it still sounded a little unclear. Let me be more specific. At any given time a Motorola system will use one of up to four frequencies for it's data channel. When a frequency is not being used as a data channel it goes back into the pool of available voice frequencies.

There, now even I can understand that!! ;-)

So, the most frequencies you should ever have to program is four. Remember that this only applies to Motorola systems. If you're monitoring the system now just keep track of the data channel rotation and you'll be all set when you get your 780 this summer.

Source record: 92118

If you have the money and most of all friends on the inside where the dispatch center is you could do this.
1. Find out what type of radios the police are using. Indy is using the Motorola MTS8000 (I think). Now any motorola trunk radio could pick them up if programmed right.
2. This is where the friend comes in. If you have a friend or can find someone who knows how to program the radio with the police talk groups, you are set.

Basically it could be done if you had the right connections and money. There is a forum called trunk radio forum. It changes all the time and I really no long listen to it. I just know it changes cause they send me an email. One time someone wanted to buy one of these radios I mentioned above. I guess they are for sale to the general public, but I am sure the would cost a ton of money. I know that the ones we have they have put the national emergency calling talk groups in ours (for US). This lets up call police usually in large cities. However it was rumored that if we take our radios to another city and push some of the buttons, it could be programmed to that city. I can only assume this would be some sort of learn function. If this is true I don't know. You may want to find out what radios they use, then go the at manufactures site to see if you could get one. Of course then comes the programming part. Both would be somewhat hard to do.

Also, the following radio I know can pick up Indy freqs even though its a base unit. This is what I am talking about. Go to:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=279125042

Getting the radio is easy, getting it programmed would be the hardest part.

Here is an auction with the type of radios I am talking about.
You want to try to find one with at least 6 keys. This would let you
change families or groups. Some have the 6 keys plus a phone keypad for
those with radio phone ability. Hope this helps.

Suit yourself. I plan to read electronics/antenna/physics textbooks /
information and tinker with circuits, antennas and what have you till
the day I croak. Personally I've found the CW ops , particularly the
QRP gang to be some of the most technically astute ones in ham radio,
but YMMV.

Tom,

Why build one when you can buy one of the best all-band antenna's ever sold?
take a look:-)

Listening-Post. This web page is dedicated to scanner radio hobbists who
are frequency hunters On here you will find lists of Ontario
radio frequencies that are not listed on any web page, published in any
scannner book Haruteq or Scantrix or listed in the government
frequency list - Industry Canada's TAFL. This list is all based on
research and the patience of the people who contribute to this web page

> I have looked at these diodes and there are many color bands

By the sounds of the above, and the pricing, perhaps you are looking at the
wrong device.
Try going to an electronic supplier rather then Radio Shack.
They are ,generally,much better informed.

May be in USA, but here in France the VHF/UHF bands are so desert, that
one can think that most french hams are dead.
The major pollution is on some repeaters invaded by CB-like QSOs, but
repeaters can't be considered as ham-radio, it's like cellular phone.

Yes I think too it's a great asshole filter, but not in the same way
that you :-))

I don't hear whining / crying / caterwauling child
> like individuals in the CW portions of the bands :-)

On the 30m band, CW hams make QRM on SSB QSOs, this is not acceptable.
CW is a mode among others, so no more privileges for CW.

Well, are you going to tell him the polarity of the ohm meter?? If the guy is a neophite enough not to know how to tell diodes, he's probably going to have a real problem with a VOM and the polarity when checking diodes...

Well, sounds like a nice adapter...

But...

While the adapter may in fact be all you say, how many scanners are built to the same physical spec for the connector? I've seen units that had the BNC 'recesssed' into the plastic. While there may in fact be a standard dimension (in fact, I do NOT know if this is true or not) for the spacing from the bayonet pins to the base ring, I gather from your description this is a hard cone that is wider than just the base ring on a BNC jack. So if in fact the cone IS wider than just the ring, then it may not even fit all all radios.

Every day I spend 2 hours on a train and like to spend the
time with my head in a good book.

Just when I get to a good bit, some ignorant f*cker starts
shouting into their mobile and I can't concentrate.

In my bag is my trusty Icom R2 -- surely I can use it to put
an end to the call?

Anybody know how?

I am sure I remember reading something once about
programming an offset and blipping the monitor button to
switch between receive frequencies... but I can't recall
where, when or how...

ven if you don't know shit about electronics any idiot could tell
that one pare number is to purchase 50 of the diodes, the other is
for 10 of these diodes and the lastly is a part number to order only
one of these diodes. Don't need to be a rocket scientist to figure
that out.

Seeing that most all of our FCC's violation busts involve individuals
using some type of voice mode my 'Filter' designation still stands.
:-)

Ahhh I suppose from *your* vantage point you can *determine* that
those CW stations can *hear* the SSB stations (and vice versa). Unless
you're referring to fixed station SSB I'm also not sure which (if any)
countries allocate SSB operation in the 30 M band , in the US here
it's CW/RTTY/Data only.

>CW is a mode among others, so no more privileges for CW.

Sorry to enlighten you pal but you're _NOT_ the one making that
determination ;-) much as you'd dearly love to have the power to do so
:)

Ahh.. actually yes, now I have found some equivalents at
http://www.strongsignals.net
I guess I am still confused, though. Is the UC1730A (6H1) pin compatible
with the UC1782 (AE65H)?

Radio Shack Models Manufactured By Uniden

PRO-2023 PRO-2025 PRO-2026 PRO-2030 PRO-2033 PRO-2034 PRO-2036
PRO-2038 PRO-2040 PRO-2043 PRO-2045 PRO-2046 PRO-2048 PRO-2050
PRO-2052 PRO-2066 PRO-23 PRO-24 PRO-25 PRO-26 PRO-27
PRO-28 PRO-29 PRO-35 PRO-38 PRO-41 PRO-46 PRO-49
PRO-51 PRO-59 PRO-66 PRO-67 PRO-75 PRO-90 PRO-91
PRO-9200 PRO-94

Radio Shack Models & Uniden Equivalents

RS Model equals Uniden Model
PRO-2026 = BC760XLT
PRO-2036 = BC890XLT
PRO-2040 = BC860XLT
PRO-28 = BC60XLT
PRO-46 = BC200XLT
PRO-51 = BC220/230XLT
PRO-63 = SC150
PRO-70 = BC80XLT
PRO-90 = BC235XLT
PRO-9200 = UBC148XLT

I would think that it would be very easy to descramble a cordless phone that uses a speech inversion
algorithm; however, it would be harder to descramble digital phones.

For Anyone who is interested, here are the Vancouver EDACS frequencies are rite here for your consumption.

Vancouver Ericsson EDACS digital Operated by E-Comm (Emergency Communications) and used by the police, EMS and fire departments in British Columbia. In the future, it will also be used by Public Safety agencies in Vancouver. Frequencies: 866.0875, 866.1375, 866.3375, 866.3875, 866.5875, 866.8375, 866.8875, 867.0875, 867.1375. Note: data channel switches from week to week. This is just the first phase of the E-Comm system which should have more frequencies in operation in the near future. The Vancouver police system is fully digital with no clear voice communication being heard. I have just seen an officer carrying what looks to be a EDACS LPE-200 radio so its safe to say that the system is fully operational.

Source record: 92092

Get the ones off the shelf that look like "goldfish"
color. These should be silicon diodes in a multi-pak
for about $3. The end of the diode that has the black
band closest to the end is the cathode. (Actually almost
ANY silicon small switching diode will work)

I take it that u are going to do the Shortwave Mod to your
Pro-43. Be warned that if you have a problem figuring
out the cathode end of a 1N4148, you should best leave
the mod to someone more experienced so you dont trash
yer scanner. You have to move one of the Surface mount
diodes on the logic board to accomplish this. Easy, but
needs *some* experience.

5960. Re: yagi antenna

Newsgroup: rec.radio.scanner
Date: 2000-03-15 00:00:00 UTC
From: a6m2bzero@aol.commotion
Message-ID: <20000314233839.02596.00002186@ng-fq1.aol.com>
Source record: 92146

<<Is anyone know how to built a very effective yagi antenna for the 900 = MHZ band ?>>

I can give you the dimensions and a bit more, although I'm more used to thinking of these as transmitting antennas for HF, but ...

assuming a half-wave yagi, where f = frequency in MHz, the length of the driven element in feet is 472 divided by f. The length of the reflector element in feet is 490/f. The length of the director element in feet is 458/f.

greater boom length = more gain, more elements = more directivity, you'll also need a balun.

in your example, at 950MHz, the driven and parasitic elements are around 6 inches, I think you'd want vertical polarization.

Baltimore County Police use 800mhz radios. The district level undercover units
(ISU) and (CDVIT) use talkgroups assigned to each precinct, for example
Precinct 1 (Wilkens) uses Talkgroup 301- Trunktracker ID 7536.

Your choice. You can just coil up the extra (which is what I'd do)
or you can cut it and then later place a PL-259 on each of the cut
ends and stick in a barrel connector to give you back your 50' of
length.

Hi all,

Living in an apartment building. There is TV antenna on the roof that is piped down to my apartment (3rd floor of a 4 story brick apartment bldg) via a wall plate with an "F"(?) connector. I currently have an antenna specialist all-band scanner antenna on my window sill as my primary scanner antenna.

My question is, would the TV Antenna perform better than the scanner antenna in this situation??

I do very little (if any) low-band monitoring. Its all VHF-Hi and UHF with some 800Mhz trunking thrown in.

Thoughts? Opinions?

Thanks in advance
Ted

I am a news photographer for an NBC affiliate. Our area just went digital and if that cop thinks there's nothing on the market (scanner-wise) to listen in on a trunked system, he's very naive. We just purchased two base model trunktrackers and we seem to be able to pick up plenty of chatter. I'm sure you can get a trunk tracker II and do the same.

Happy Scanning!

I'm not shure to understand clearly you question.... but if you want to know the split range for an input versus an output frequency, generally speaking in Canada (and US too i guess) it's 39 Mhz for commercial systems.

Ie: if the output of the repeater is on 937.1625 then the input (or mobile TX) will be at 898.1625 Mhz

Hi Ted,

Commercial FM communications is vertically polarised and television antennas are horizontally polarised- the penalty here is 20 dB- enormous.
In addition, TV channels are by design fit in between the comm frequencies- so the antenna will not yield its gain and pattern characteristics that it does in the TV band.

Dale W4OP

The TV antenna most likely feeds the multiple apartments through an amplifier, filtering out the non-TV frequencies (if you get TV on other than the broadcast channels this is a certainty). You would most likely get a set of very strong TV channels overloading your scanner and little of what you actually want. Add to that the fact that the TV antenna is horizontaly polarized and probably directional. Virtually any scanner antenna would be a better choice.

Staight out of a news article:

***The new system will scramble the channels across which voices are transmitted, a technology known as "trunking." While "trunk trackers" are available at mainstream electronics stores like Radio Shack, these scanners are incapable of monitoring a digital system. Hook them up, and an exasperating hissing noise is about all you can hear.

The privacy factor certainly has its advantages, as law enforcement officials are quick to point out. "Bad guys," particularly drug dealers, will no longer be able to use scanners to pinpoint where cops are located ***

Also:

***Although Philadelphia officials have not issued a policy on how they plan to handle media access, Procurement Commissioner Louis Applebaum says they are "studying" the issue.

"We envision the media will have an opportunity to buy equipment. The city will control what [which channels] they get - routine traffic, primarily. If there were a drug raid in Kensington, for instance, that would be protected," he says.

The City Solicitor believes it is "within our rights" to keep radio communications secret, Applebaum says. "We are not going to jeopardize an officer's life, and once you let the media in, you're taking that chance."

Even for the limited access the media is lucky enough to get, news outlets must pay dearly.

The city of Cleveland, for instance, sells Motorola monitors for $4,000 to $6,000 each. An annual licensing fee of $50 per radio is stacked on top of that.

Costs incurred by Fox affiliate WWJW are typical. That station purchased two scanners for monitoring police frequencies, plus an additional scanner for fire and EMS channels. WWJW paid a one-time programming fee of $100 for each of the three scanners, as well.***

Still think your trunk tracker will be able to pick that up???????

Popular Electronics had SCA adapter projects every few years in
their magazine. If you're handy with a soldering iron, you can
easily build one, and then tap into the detector of any FM BC radio.

You'll have to know which SCA frequency is being used. The two
primary frequencies are 67khz, and 92khz. There are others. Many of
the SCA services are now digitally multiplexed on those subcarriers,
so you may find them unaccessible without the proprietary receiver
offered by the SCA service. On the other hand you may find a used
PRN receiver, which were plentiful when PRN was in operation.
Doctors everywhere were listening to techniques for colon massage,
and spleen removal, and the latest gunshot trauma techniques
piggybacked on rap and urban stations for years.

One option would be to use a tuneable receiver, with longwave
capability, and use that as the SCA adapter. There are a number of
desktop rigs that will actually tune to O hz if you twist the knob
that far...but with reduced sensitivity below 100khz. Kenwood R-600
is one such. There are others. In most cases you can simply tap into
the discriminator of your FM BC radio, and take that signal into
your longwave receiver, and tune to the subcarrier you want. Caveats
include raising the impedance of the input of the longwave receiver
so you don't load the discriminator of the FM radio, and making sure
that the input connection is isolated from ground. And since SCA's
are generally not free broadcasts, you'll not wish to be talking
about it, unless you intend to subscribe. In which case the service
will provide you with the receiver.

Most SCA services are amplitude modulated, so you don't need too
fancy a radio. Once you have acquired the signal, you'll get a
pretty decent read of the SCA intelligence.

I want to listen to a Japanese station being "piggy backed" on a
rock

The city of Philladelphia is being assinine again... They are depending on security when the very people they are concerned about are the same people with the money to 'procure' the resources to listen anyway.

Just one more 'follow-on' of there stupidity of the 70's when they tried to ban the sale of scanners in the city.

THERE IS NO SECURITY OTHER THAN THE REALIZATION THAT
THERE IS NO SECURITY!!

Once the city of Philladelphia realizes that, the officers will be MUCH safer in fact, instead of safer in fantasy.

Mike

Obviously they haven't gone DIGITAL then. Otherwise, you would hear no
chatter at all, just noise.

I wish news media types could actually learn something about the stuff they
try to report. No wonder the American public ("more Americans get their
news from ...") is so ignorant and confused.

Could you help out a poor, misguided, No-Code Tech for just a minute? Your argument has left me behind somehow. This part of the thread seemed to concern violations on 14.313, 3950, etc. Now, aren't those frequencies used by Amateurs who have already passed at least a 13WPM test? Given THAT point, this test filtered them out - how???????????????

I don't think is "was" illegal. But I don't know about now. Previously it was just illegal to 'use' it. But not illegal to receive it. Then under
ECPA it was not illegal to receive it because the 'parameters' of it's encoding were not withheld from the public.

Now....

Well, there's two issues here. One is the people who PASSed
the 13WPM and are still lids on voice.

The other is the people who USE CW for fun.

No arguement, people who use CW generally are more well-
behaved when they use it. And I'd even have to say they are
more well-behaved in general as HAMs. But then, I think
that's more a function of the fact they enjoy the hobby for the
'communication' aspect.

The people who have passed CW to 'get something' and then
are idiots are the other point. They are generally the loudest
people for the arguement of "I did it you should too" for maintaining
CW as a requirement. And they are loud and obnoxious in general
as well.

The CW operators on the other hand are on average more mellow,
although they do have some die hard idiots there too, but they
DO seem to behave themselves when in the CW bands.

Yeah, actually it was. SCA services were by subscription even
then. Most of them were Muzak, and it's variants. Even the Popular
Electronics articles suggested that the SCA adapters as depicted
were a grey area, and access to the services through them were
'theft of service'. I think the only loophole was in the fact that
these were homebuilt devices for experimenters privately in the
home. I know that there were inspectors that made the rounds of the
local businesses to check that subscription services were not being
used in unauthorized ways, but ECPA and it's subsequents have become
very clear about not only use, but access, to subscription service,
encrypted or not.
And in today's jackbooted society, where accusation carries more
impact than conviction, the actual letter of the law, and the
legality of the act may be irrelevant if someone wants to make an
example of someone else.

But THAT"s a whole 'nuther Newsgroup.

>some opinions on this scanner,information on the web is hard to find on this
>model.does anyone know where i can find a review of this model?

I'm not aware of any "on line" reviews but it hasn't really been a model
that has been widely available.

Manufactured by the same Company that produced the AR1000 and AR2700
(amongst others) it was also available as the CAMNIS HSC-150

>also is it still current?
>how does it work under the computer controlled software?

You will need a TTL interface and the PC Connection on the radio is a
Mini-Din type, software is available on our web site if you want to take
a look.

>where can accessories be bought?

Other than an interface there are not really any "specific" accessories
available for it that I can think of.

>how is it on hf bands and ssb?

Like many of the wide band receivers with SSB modes it works "OK" in
most areas but as to whether it would meet any expectations you have I
don't know.

Tell me about it. It's so difficult for me! Hats don't fit
right, I've got bruises on my temples from squeezing thru
doorways, headrests are too small and I'm always getting
stuck in the sunroof. But that is neither here nor there.

Your response was about FIVE TIMES the size of the post you
are
> complaining
> about telleing the guy "LET IT DIE ALREADY" yet YOU stirred things up
> worse than anyone!!!

Of course. It's all my fault isn't it? I forgot that I
control your hands and mind and that you cannot help but
reply to every usenet post that contains the words "Troll",
"Toilet", "Bill", "Cheek" or "Retard". How silly of me...
>
> You referred to YOURSELF (I) EIGHT TIMES!!! You then used
> the word "FOOL" SIX times!!

Congratulations TB, you finally learned to count! I'm
impressed. All the way to 8 too....mom must be so proud. So
tell me, if my post was SO long and SO offensive and SUCH a
waste of bandwith, why quote it in it's entirety? Shouldn't
you, as self appointed netcop, protected and served the
internet by removing the offensive posting? You're slipping,
John!

>
> And why were you dragging the alt.radio.scanner NG into this,
> they had NOTHING to do with this thread.

Hmmm... let's see now, how does that lame excuse of yours
go....? Oh yes, that's right: "I am policing the newsgroups
by using the same form of peer pressure that is used in the
amateur radio community." Or was it "I'm making the internet
a better place by changing my headers"? Or was it "I'm
testing new anti-spam measures to make usenet better for us
all"? Hell, I don't remember now, you've come up with so
many whoppers over the years. It's got to be one of those,

I'm almost certain of it.
>
> Phil Smalley, you should follow your own advice &
> "LET IT DIE ALREADY"!!!

Should I? C'mon now John. If you REALLY wanted me to do that you would have kept your big fat mouth shut, huh? Oops - looks like I caught ya again....

And yes, for those of you keeping score at home, this was an off topic post. But I'll stop now. As I said, it's just too easy. I need to sign off anyhow, the big hat salesman said he'd call me when my new hats are ready!

-Phil

Vibrators with a Remote Control.

Yes, the latest in weird techno toys -- somebody is making vibrators with remote controls. (Why do people buy them? I'm not sure I want to know.)

Still, it seems like an interesting target to hack. It obviously uses radio, because providing an accessible infrared port could be a problem. It's probably just some off-the-shelf technology from car alarms or garage door-openers. (The radio part, I mean.)

A transmitter and perhaps a CPU, and there's a few techno-pranks that could be done.

Betting. Hang out in an appropriate bar/club, place bets on how many people will jump when you push the transmit button.

3 O'clock Charlie. Use a wider range transmitter and make some people's day -- at precisely 3pm every day. I bet it wouldn't take long before it made the news. Too bad it wouldn't possible to collect the demographics of who was tuning in.

Now, some people might think this a bit vulgar -- but *I* didn't make the things...

Ron of that ilk.

Perhaps it would be better for those that wanted no kind of change ever again to the hobby/service to depart themselves, rather than see their beloved hobby depart....that way it leaves it for the rest of us who have a more realistic attitude toward change.

There is no way for a single transmitter to cause all of the garage doors
in a neighbourhood to open at the same time - the garage door openers
use different frequencies and different ways of transmitting the unlocking
codes. And, of course, the codes are going to be different even for
two receivers from the same manufacturer.

Even if radio-controlled vibrators do not have any true locking codes,
they are *still* going to use different frequencies and transmission
formats, and some way to have one receiver not respond to all transmitters
from that company (i.e. the X10 channel codes).

You're fantasizing if you think you can trigger all of them at once.

Dave

Unlike some extras on this newsgroup, he didn't do it for the
purpose of being worshipped by other hams - he did it for himself
which is exactly as it should be.

No, this isn't correct. You will still need to program in all the
frequencies for the trunked system. What it means is that the radio will
get it's trunking information from the control channel, unlike the PRO-92
which gets it's trunking information from sub-audible signals on frequencies
other than the control channel. This is called the slow-handshake method.

On larger trunked radio systems it appears that using the control channel
following method is more reliable than using the slow-handshake following
method.

This will be true for Motorola and EDACS type systems. Since many LTR
systems don't use a single control channel I would imagine that the claim
that Uniden is making refers only to systems with a control channel.

I somewhat see your point. Like anyone else, if you really want
to do something, you find the time. As far as what I accomplished,
well, I accomplished what I set out to do. That is not always an
easy thing to do.

Having over a year of advanced notice isn't exactly "rushing"
into it. I definitly had to think about whether I just wanted
to sit tight and wait it out, or just get it done. I know you
didn't ask, but, had I waited for the change to happen, I would
have upgraded the easy way. But, after all these years, it just
wouldn't seem the same.

It really didn't take that much time. I only studied the
code for about 15 minutes a day. It turned out a whole lot easier
than I thought it was going to be. And, no, I am not saying that
"anyone can do it", or that "If I did it, you can to". Because
some people just can't do it. For a while, I thought I was one
of them. And, it helps me accept all the other million things that
I can't do that someone else can.

Oh well, I think I generated enough noise on these news groups.
It's been nice talking with you.

Martin

You've never heard of learning for the sake of learning? Most amateurs
don't upgrade to prove something to others--most do it to prove
something to themselves.

I am looking to replace my nicads in my AR8000
with some NiMH type batteries.
First is this a good idea, should I get more time on
a charge from NiMH or NiCads??

Also when looking at the NiMH's should i go with the
ones rated the mAh (1300 instead of 1200) or will the
AR8000 only work with certain ones??

Thanks to everyone the response, this news group has
been very helpful.

The Bob & Tom radio show had a pair of womens painties with a vibrator in the crotch. They talked a woman into wearing them while she shopped. She was in the produce section, picked up a cucumber & asked the produce manager how much it cost.

You guessed it. Just as the manager told her the price...BUZZZZZZ. She had the "Big O" right there in the store. Funny I tell ya. Dang near split a gut.

Later,
Charlie

Jim,

Any of these rigs will do better on SW if you attach a length of wire to their antenna. And, you're also right in they sacrifice sensitivity in the HF frequencies for VHF/UHF coverage (their main purpose).

One alternative still in your price range might be the Yaesu VX-5R tri-bander. It has most of the features and range of the VR-500 plus it is a true hand-held transceiver for 6M, 2M and 70CM. It has a blank spot between 16Mhz and 48Mhz and it doesn't receive SSB, but everything else is pretty much there.

All of these will be difficult to use while driving, and you will probably need to feed the audio to your main radio in the cab. I use a cassette adapter with a stereo to mono plug adapter on my scanner. Seems to work fine.

Rich Wells Strong Signals site has in-depth reviews of the radios you are looking at. His site is:
http://www.strongsignals.net/

Good luck.

-Dave

<29003-38D0DFF0-2@storefull-627.iap.bryant.webtv.net>...
Does anyone know the 800mhz restoration mod for the Icom R-2 Receiver?
I Have sucessfuly restored the 800 mhz in my R-10, So I was wondering
If anyone had figured out the R-2

Thanks,

Dave Danfelt

It might be very difficult considering that the American version uses a different uP
than the international version.
Al

He meant CB-11 as in "11-meter band," not channel 11. Ham rigs aren't
channelized, even the 5- and 12.5-kHz-step V/UHF rigs read out in mHz.

Hi,

I've created a mailing list for those interested in collecting and/or operating old scanners and monitors. Point your browser to http://www.onelist.com/group/vintagescanners to join.

Feel free to join and share information on the scanners you are interested in collecting, post a list of crystals you'd like to swap, or just wax nostalgic on that nifty radio you used when you were just starting out in the scanning hobby.

C'mon. It's OK to admit you still use a Bearcat III...and like it!

Heard from my dealer that Uniden just raised the dealer's cost of
the 780XLT $100 over what they had been originally told. Now a
suggested retail of $450 with street prices somewhere less than
$399.

Apparently the FCC has become fussier about that. It used to be that
it was only necessary that the radio not receive cellular phone frequencies
out of the box, and jumpers or diodes used to distinguish between USA
and multiple international versions were acceptable. Now, the FCC seems
to want radios to be almost impossible to modify for cellular reception,
and the manufacturers have responded by have a different CPU for the USA
versions than for all other models.

Since the R2/Q7 is a pretty recent design, I wouldn't be surprised to
find that Icom used the different CPU method in it. The service manual
should say for sure, but mine has been on order for 6 months now and
still no sign of it...

My R2 is a Canadian model and thus has unbroken coverage out of the box.
So I haven't particularly pursued "mods" if any are available.

Dave

Here is a listing of the six new HF CB bands available
April, 2000, their designations and allowable modes.

Note: This bandplan has been endorsed by the C.B.R.L., Citizen
Band Relay League, Newington CT.

Band Frequency Allowable
Range(mHz) Emmissions

CB-160 1.8 - 2.0 Splatter Mode, Echo-mics o.k.
CB-80 3.5 - 4.0 Belching & Farting permitted on 3.950
CB-40 7.0 - 7.3 Splatter mode, 7.2 echo-mic calling freq.
CB-20 14.0 - 13.35 Jamming modes permitted on 14.313
CB-15 21.0 - 21.45 Noise Toys & Roger beeps ok below 21.250
CB-11 27.185 Restructured amateur calling frequency.
CB-10 28.0 - 29.7 Tweak your CB a bit more and you're there!

Profanity, insults, and Cursing are permitted if phrases like
"Extra Class" or "Morse Code" are used in the same sentence.

Discussions of a technical nature are rarely heard and prohibited.

I'm 10-7, 10-4?

See ya on the new Bands!

I realy find it priceless to blame the ARRL for restructing.
They did everything possible to stop from showing up at all, and when
it FCC decided to go ahaead anyway (which was something of suprise to
me) the ARRL put forth the best that it hoped it could get on Morse
Code, yes they failed to get it (thank the gods), but they did their
best for the code bigots

10-4 good buddy.

I have my 20kw diesel generator and my 5kw CB linear all tuned up and ready to go. It'll do 5 kw with a bag of sugar laying on the D-104 key all day long, while I play Eddie Arnold records. (gag)

I can't wait to burp, pass gas, work the action and fire my guns, and tell glorious stories of killing and dismembering cats to the retarded masses that will have one of these shining new licences like me! Heck I might even get out my comode 64 and have it swear in CW at 20wpm for all those code loving dirtbags in those elite areas of the band.

See you all there. Haw Haw Haw

I can agree to that, it still takes 5 wpm to get a ticket today on april 15
it still takes 5wpm where are the people beating the door down at this time,
dont expect to see them on april 15

Whatever happened to the Haruteq Scanner Books ???

They used to carry them at Radio Shack just a couple of years ago, and now I can't find one for the life of me ???

Is there a website, or anything anyone can tell me about finding these books ???

PA>

You call that an auction!? You started the 1st bid at $200. Brand new it is $199.95.

6064. Help me decide on a scanner/all mode receiver

Newsgroup: rec.radio.scanner
Date: 2000-03-16 00:00:00 UTC
From: Jim <hop.along@worldnet.att.net>
Message-ID: <ZkbQOOy+RFQy14NnuE3Api6YAGFZ@4ax.com>
Source record: 92012
Cross-posted to: rec.radio.shortwave,rec.radio.scanner,alt.radio.scanner

I'm currently L-Z-Boy chair bound while recuperating from an orthopedic procedure on my foot. I'm in a cast for another 2 months and would like to indulge in some radio listening to help balance out my regimen of TV, video games, and the internet.

I've always wanted to listen to SW broadcasts, and I've recently passed the No-Code Tech tests and will get a VHF mobile when I'm back on two feet. So I would also like to listen to the ham bands (SSB and CW).

I want to stay in the $250-$350 price range.

When I'm working, I'm an over the road truck driver. I'd like to have something rugged and portable that can go with me on the road. I'm highly interested in the SW bands, HF ham bands, AIR bands, and VHF bands. I definitely want an all-mode receiver. I also want scanning and memory channel capability. Therefore, I've been looking at the:

Icom R-10
Alinco DJ-X10
Yaesu VR-500

(The AOR 8200 is outa my budget)

The Icom has a plus. The ability to link to the Optoelectronics Scout reaction tuner. That seems like a fun/useful thing to have on the road.

Since all three of these go from just below AM broadcast to gigahertz range, do they sacrifice sensitivity in the SW and HF spectrum to hear VHF and UHF well?

Is the receive in the SW bands greatly increased by adding a long wire antenna?

What are the Pros/Cons of these radios?

I'm very interested in hearing from owners/users of these radios.

Thanks,
Jim

6065. National CB Center

I joined the National CB Center and sent $25 for the membership. I have
received a few bits of paper and the National Comm. magazine. In the
mag it states that you have free access to the BettyBearcat/Mr Scanner
frequencies. It asks for a password to get in. Anyone help with how to
E-Mail these people and ask questions?
Any help will be appreciated..

Check on a Ranger 2970, it's AM, FM,USB,LSB. Great radio in the $350.00 range. Can be converted also to include CB (40ch) and it puts out 28 watts dead key, 150 watts mod.

It didn't.

I wasn't referring to the "test", merely that overall I find less
obnoxious behavior in the CW sections / with CW ops than I do in the
phone segments. Occasionally there's some yahoo sending "FU" , a
little carrier swishing etc (probably just slid down from the phone
freq's for a minute or two ;-)) but *far* less nonsense than
you'll find on the phone freq's.

Re: RS PRO-71

Rick

Can't mod the Pro-71 not i know of. Best best is finding yourself -
GRS Super converter II - 810 Mhz-912 mhz,
product discontinued, but you bound to found it.

KC5KTO's Radio Shack Scanner Modification Page -

You are absolutely right! OBTW, why the hell should I have to learn to use an arcane mode of communications such as CW so that I can use phone on 10M & 12M, which is all I really want to be able to do? Hell, even the US Navy dropped CW from their technical requirements for Communications Technicians! I am a technician perfectly capable of doing my own repairs and adjustments to radios. I have passed all of the trial tests for Technician and General. I was once licensed as a Broadcast Engineer back in the late '60s with an FCC Radio Telephone license. But I have tried and failed to learn code. So, I am probably more qualified than those idiots out there that passed the CW test but don't know Ohms Law! IT STILL SUCKS!

The squelch tail can be moded with a 100k resister ((my squelch tail is very tight)
The key beep can be disabled as well
Backlight can also be moded to stay on using a Micro SPST switch The first two mods are pretty wide spread to find. The backlight I figured out on my own By having done the backlight mods on my 235 and 245xlt plus on my pro 64 and pro 26

Good Luck

Ham radio will be better off when attitudes like this cease.
Honestly, whether you like it or not, get over it! April 15 will
come and go, you might find some new people to talk to on HF
but otherwise you probably won't notice much difference.

From what I read on these newsgroups, all the really badly behaved
ops are extras already!

Some young people might get interested and actually progress the hobby
forward in some way. Wouldn't that be amazing? Less people talking on
HF about their currentl illnesses, I'll look forward to that.

Funnier yet is what's happening right now. And it started over a
year ago, when the anouncement was made about the license structure
changes.

If you attend a VE session right now you will find that they are
pouring in to take the 13 and 20 WPM tests, because after April 15
they won't be able to any more. For many hams it's simply a personal
issue and they could care less that the need for these tests might
not exist a week after taking them.

When I heard about the license restructuring, in Dec 1998, I
decided that this was my last chance to prove to myself that I
could do it. It took 6 months of effort but I did pass the 20 WPM
test (with solid copy) and finally made Extra. Now, I don't care
if they change everything. I did it only for myself. I have been
loving Ham Radio for over 35 years and I don't intend to stop
loving it.

Well, so much for patting myself on the back.

The only part of the change that surprised me was dropping the
13 WPM requirement. I knew the 20 WPM test was going to go away
and I thought they might lower the 13 WPM test to 10 WPM, but
it seems I was mistaken. Go figure.

> You could put ham radio license on the back of morning Cereal
> boxes .... Just sign here, your an extra ham and you would have
> NO takers.

Will that be the box of Wheaties with the picture of
the Old Man himself, Hiram Percy Maxim, on the front.
I'll by a box even if I don't need to cut out the coupon.

> About the only thing thats going to happen on
> april 15 is the already licensed hams are going to capitalize on
> an easy upgrade.....................
>

If they are willing to venture into the CW portions of the band,
I'll be glad to talk to them. No matter how bad their CW might

be in the beginning. As long as they don't mind how bad mine is.

But, no matter, it's their right to choose what license they
want to obtain and where they want to operate.

No flame intended to anyone. Just another opinion.

Martin

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

You may be able to obtain manuals for older Midland scanners from:

Midland Consumer Radio Products
1670, North Topping,
Kansas City,
MO: 64120

Phone: 816-241-8500

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the

scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models

are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company

The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.]

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)

dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes and extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information

is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the

channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75

recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel

pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found

during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my

shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a team of G-men protect the president while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some models, like the early Uniden SportCats and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $1500 Icom R8500 and $2000 AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC895XLT, BC245XLT, SC200, and Radio Shack PRO-91 and PRO-94 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites. The ICOM IC-R2 and Yaesu VR-500 are the two smallest "pocket" scanners which perform. Both are tiny enough to fit comfortably in a shirt pocket so you can monitor without attracting undue attention.

Looking for value? At $170 discount price, the 100 channel Uniden/Bearcat BC278CLT base is a good value and available at most Sears and Best Buy stores. The Uniden Sportcat SC200 portable performs very well is an excellent value at its $220 street price.

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your

scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, http://www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance. The Premier (Prime) RD-9 and RD-9SMA are about the same length but even thinner.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas. The Austin Condor is available from Grove Enterprises.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna Co., Inc. and is designed to cover both the 2 meter

and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A (available from Amateur Electronic Supply) or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is http://www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is http://www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. Modifying any scanner to receive cellular phone signals is now considered illegal. By federal regulation, new scanner models must be designed to they cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the

Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (http://www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 7825 Black Street Rd., LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial

broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, http://www.grove-ent.com) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the

public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM. The PerCon Spectrum CDROM sells for under $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM, too.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)

dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes an extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an

invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

Other scanner mailing lists include: scanner@onelist.com, scan-l@onelist.com, scanner@qth.net, and sonofrcma@onelist.com.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about

4 PM. You must purchase a lunch since we get the room for

- 2 -

free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

All 1999 meetings (except August) will be held on Saturdays at Phillies Pizza, 6300S. Kingery Highway, located in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook, IL,

The 1999 meeting schedule is: April 3, June 5 (picnic at Argonne National Labs), August 7, October 2, and December 4.

The CARMA Picnic will be June 5th, 1999 at the Argonne National Labs Picnic Pavilion, Cass Avenue, south of I-55 in or around Darien or Lemont. The picnic will start whenever someone arrives. The regular meeting will be in the Pavilion at 1:00 PM. If the weather is totally frightful we also have a room inside the Laboratory building available for us.

The Picnic is BYOE (Bring your own everything) If you want to eat or drink, bring it with you, as well as your BBQ or six pack.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal
fundamental frequency. Merely supply International with
the exact receiver model number, printed on the rear label,
and the frequency you want to monitor. They will perform
the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second
local oscillator crystal is 11.155 MHz regardless of band.
On VHF high band (148 - 175 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700
series, one for each local oscillator. The crystal
formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the
first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel

Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications
Corp. sells used Plectron receivers, in working condition,
for $75-100. If you require crystals or reeds, TCS may be
able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like"
signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1999 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1999 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation sells crystals, antennas, power cords, owner's manuals ($11 ea) for some older (pre-Uniden) Bearcat scanners. Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553. You can also download an electronic copy of the user manual for recent Bearcat models from the Uniden web site:

http://www.uniden.com/docs/service/support.htm

Some schematic diagrams may be obtained from Uniden's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and

2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Matt Roberds fixed a BC220 which experienced memory loss if power was removed by resoldering the positive wire to 2-AA battery holder.

As built, the BC220 logic board is grounded only through its mounting screws. In the BC220, Matt recommends adding real wire ground jumpers from the main board to the feature (logic) board to fix grounding problems.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig and Karl Klein repaired their BC210XWs by replacing the 22uF/35V C98 capacitor.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This display is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of

a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Matt Roberds repaired the Montgomery Wards version of a BC220 and contributed these insights:

"I did add some heat-sinks, but you have to be careful what you do with the TIP29 on the logic board. I added a long, flat heatsink to it and immediately created a whine in the audio. I didn't use an insulator, as this was a temporary first-try. As far as I can tell, the heatsink was radiating noise from the logic board into the front end on the radio board, which ended up being just below the heatsink. Bypassing the TIP29 (a voltage regulator) with disc ceramics didn't work; using a smaller heatsink and an insulator fixed the problem."

"There is also a 220 ohm 1/4 watt resistor on the logic board. It feeds the TIP29 from the main +16v supply. It looked a little crispy. I pulled one end and measured the current through it and it was about 30-35 mA. This works out to right at 0.2-0.25 watt dissipation. I didn't have a higher-wattage resistor, so I substituted 2 470-ohm resistors in parallel."

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to

switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. Gary Bean reports he substituted a 2SA1298 for Q201 and it worked fine. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Sources for Replacement NiCd Battery Packs

Replacement NiCd battery packs and inserts for the BC100XLT, BC200XLT, BC2500XLT, BC3000XLT, and other scanners are available from Uniden. I've purchased them at lower cost from:

1. Mr. NiCd - E. H. Yost and Company, 2211-D Parview Rd., Middleton, WI 53562. tel. (608)831-3443. email ehyost@midplains.net

2. Battery-Tech Central, 2818 Southland Street SW, Cedar Rapids, IA 52404-4141. tel. (800)267-3087 or (319)364-0855. email rlassoc@inav.net

Batteries Plus has stores across they country and some have rebuilt Uniden NiCd packs for under $20.

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 - 1999 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

Parts lists for recent and many older models are available on line at: http://support.tandy.com. Parts may be ordered through Tandy National Parts, telephone (800)241-8742, or through your local Radio Shack store. You may be able to obtain some technical assistance from Tandy by calling (800)843-7422, option 2. The RSU (Radio Shack Unlimited) phone number is (800)-433-2024.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004, but Robert Cummings has modified an LCD from a Miller Engineering (http://www.microstru.com) experimenter's kit and fitted it to his PRO-2004. See http://dune.globe-net.net/~rc123/Robert/Backlight.html for details.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad (PRO-43 keypad is RSU#10789808) may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

PRO-7A: Channels 1 - 4 or 5 - 8 Dead

If the first or last 4 channels in your 8 channel PRO-7A
crystal scanner are not working and the lamps for those
channels won't light, replace IC4 or IC5 (type 7400A).

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

You may share information with scanner collectors via the |
"vintagescanners" mailing list at: |

http://www.onelist.com/group/vintagescanners |

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004
Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Jan 1996 - Plectron & Motorola Alert Monitors
Feb 1996 - Radio Shack PRO-2042

May 1996 - Compendium of Scanner IFs
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Aug 1996 - BMI Nitelogger II tape recorder activator
Sep 1996 - PRO-2022 modifications
PRO-2042 baseband audio tap
Oct 1996 - Radio Shack PRO-2046 mobile
Nov 1996 - Build a wooden mobile radio mount
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jun 1997 - Innovative Scanner Patents of the 1970s
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan
Dec 1997 - Uniden/Bearcat BC895XLT Trunktracker
Jan 1998 - Test Equipment Bargains
Feb 1998 - Innovative Scanner Patents of the 1980s and Beyond
Mar 1998 - RELM MS-200 mobile
Apr 1998 - RCA RP-6150 portable
May 1998 - Radio Shack PRO-2050 base Trunktracker
Jun 1998 - Opto DC442 CTCSS/DCS/DTMF display
Jul 1998 - Stub and Par Electronics intermod rejection filters

Aug 1998 - Sony SC1PC portable
Sep 1998 - Orange Book of Scanner Repair
Tone Out Testing (2-tone generators)
Monitoring ACSB (amplitude compandored side band)
Oct 1998 - AOR AR8200 portable
Nov 1998 - Alinco DJ-X10T portable
Dec 1998 - Radio Shack PRO-91 portable Trunktracker
Jan 1999 - AOR AR7000
Feb 1999 - Radio Shack PRO-2066 mobile Trunktracker
Mar 1999 - ICOM RS-8500 software for controlling the IC-R8500
Apr 1999 - ICOM IC-R2 portable scanner
Jun 1999 - Mini-Circuits ZFSC-4-1 4-way passive splitter
Jul 1999 - Racing Electronics RE2000 portable
Aug 1999 - AOR AR16 portable
Sep 1999 - Uniden Bearcat BC245XLT portable
Oct 1999 - Plectron R700 series monitor receivers
Nov 1999 - Uniden Bearcat BC278CLT clock radio scanner
Dec 1999 - Uniden Bearcat BC248CLT clock radio scanner
Jan 2000 - Radio Shack PRO-92 portable scanner
Jan 2000 - Stridsberg Engineering FLT201A FM Notch Filter and
MCA-204 Receiver Multicoupler
Feb 2000 - Yaesu VR-500 portable wide coverage receiver
Mar 2000 - Uniden Sportcat SC-200 portable scanner

Note: Reprints of Monitoring Times articles are available
for $3.00 each plus a self-addressed stamped envelope from
Grove Enterprises, 7540 Highway 64 West, Brasstown, NC
28902, tel. (800)438-8155. I don't receive any part of this
reprint fee.

ALINCO

DJ-X10T: 1998 vintage. Rugged construction - metal back.
Multimode frequency coverage 0.1 to 2000 MHz (minus cellular
bands). 20 selectable step sizes from 0.05 to 500 kHz.
Knob atop the radio clicks when rotated and serves as a VFO
knob, channel selector, and menu navigation control.
Several battery pack options for NiCd and alkaline battery
cases. Furnished with an EBP-37N 4.8 V, 700 mAH NiCd pack
and a sturdy 11 hour drop in charging stand. Loaded with
firmware features and complicated to use. Two VFOs and 1200
channels in 30 banks of 40 channels each. Memory banks are
cryptically designated, though you can scan combinations of
banks. Each memory channel can be programmed with the
frequency, an 8 character label, attenuator, a skip
(lockout) flag, and mode (WFM, NFM, AM, USB, LSB, CW, AUTO).
Very slow 6 ch/sec scan rate. Rescan delay is about 1
second and cannot be disabled or changed. Auto Memory Write
stores up to 40 frequencies but does not check for dupes.
20 linkable search banks with labels. Up to 50 frequencies
per search bank can be locked out. Digital clock with

on/off timer. Battery saver can be disabled. Ability to scan or search for signals above a selectable threshold or channels with a specific mode. Band scope 7 or 40 steps wide. In short, 30 - 1000 MHz sensitivity is good, few birdies and little intermod. WFM broadcast reception very good. The DJ-X10T squelch can be set to one of 10 levels. We had to keep the squelch set to SQ3 or higher, otherwise it opens at inappropriate times, especially when the battery saver is active. The DJ-X10T instruction manual does not specify the IF (intermediate frequency) scheme. Filters inside the DJ-X10T imply 0.455, 10.7, and 45 MHz IFs. Our tests indicate a first IF of 736.25 or 275.45 MHz, depending on the frequency to which the DJ-X10T is tuned. Our DJ-X10T hears images of cellular phone signals clearly in the 1419.9 - 1444.9 MHz range, 550.9 MHz above their actual frequency. For a full review, including technical test results, see Monitoring Times, November 1998.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

AR8200: 1998 vintage. S/N 550004 tested. Portable, high end "super" scanner covers 0.1 - 2040 MHz (minus cellular in USA version). Not a scanner for beginners. Many of the settings are made through the use of menus. Lots of features. 4 AA batteries, steel belt clip, plug-in AM antenna. 1,000 conventional channels in 20 banks, 10 temporary channels, one priority channel. Each memory channel may be programmed with frequency, label, mode, step, step-adjust, offset, attenuator enable, noise limiter, AFC, and write protect. Multi bank scanning. You can enable a 0 - 9 second rescan delay with each scan group, but not per channel. 40 pairs of search limits with labels. Offset capability for monitoring repeater input frequency. LCD display easy to read. Display and keypad backlit using green LEDs. The band scope. Shortwave reception stone deaf on shortwave when fitted with the supplied antenna or a 19" whip. Seriously overloaded on shortwave by a 132 foot long dipole unless we use the built-in attenuator. Supplied "dorsal fin" antenna for AM BCB. Scans slowly (14 channels/s). Requires more current. Audio quality is slightly above other portable scanners. Computer port. One slot for a single plug-in option: voice inversion descrambler, CTCSS search, 256 frequency tone eliminator, voice recorder and playback, or extended (slow) memory. See AOR AR8200 review by Bob Parnass,in Monitoring Times, October 1998, for review with quantitative test results.

ICOM

IC-R10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with

little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the

schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel

interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen,

police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob.

Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging

capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring

Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn

on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range. IF frequencies are specified at 608.005 - 611.2 MHz, 48.5 MHz, and 455 kHz.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-91: 1998 vintage. Portable made by Uniden for Radio Shack. 150 channels in 5 banks. Can selectively follow conversations in 800 MHz Motorola trunked radio systems. Censors 823.975 - 823.95 and 894.0125 - 896.1 MHz covered by the BC235XLT. Powered by four individual AA alkaline or NiCd batteries. Power save feature. Program key. One priority channel/bank. One search bank. Direct search. Service search omits many police freqs (inc. 460 - 460.5 MHz). While connected to an outdoor antenna, our PRO-91 experiences intermodulation interference in the 161 MHz range from a paging transmitter on 158.1 MHz. IFs near 380.7, 10.85 and 0.450 MHz. See PRO-91 review by Bob Parnass, in Monitoring Times, December 1998, for review with quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft.

Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 -

612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search. No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SONY

SC1PC: 1998 vintage. Good RF and audio performance. Covers 25 - 1300 MHz, minus cellular phone. Selectable step size

and mode. Computer control and downloading with software and PC cable provided. Powered by ordinary AA batteries. Provided CDROM includes both the scanner control program and the multi million record PerCon FCC license database. 10 banks ("pages" in SONY parlance) of 30 channels each. Per-channel 2 second rescan delay. Unlike the ICOM IC-R10, you can scan any combination of memory banks. You can lock out ("skip") memory channels from scanning. The frequency stored in a skipped channel will also be skipped during searches. One priority channel checked every 5 seconds. SONY's limit search is restricted to one pair of search limits, though computer control expands this to 20 linkable pairs. Band search lets you search through 17 bands programmed at the factory. Service search. A cache, termed Intelligent Memory, stores the last 10 unique frequencies that were active for longer than 5 seconds each. IFs (in MHz) are 600 (below 370 MHz), 232.5 (above 370 MHz), 45.0, and 0.455. See "The SONY SC1PC," by Bob Parnass, AJ9S, in Monitoring Times, August 1998, for a review which includes quantitative test results.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6		X		no
FR2512	24	X			no
FR2513	24		X		no
FR2514	8	X		yes	no
FR2515	8		X	yes	no
FR2516	10	X		yes	yes
FR2517	10		X	yes	yes
FR2525	10	X		yes	yes
FR2526	10	X	X	yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years

ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes and extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including IBM's server:

HAMFEST/COMPUTERFEST CALENDAR 2000 - ILLINOIS
last updated March 16, 2000 |

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, John Wass KA9QJX, Tom Harker, and ARRL for pro- | viding some of the information.

MARCH 2000

March 12 (Sun): Indianapolis, IN - Indiana Hamfest & Computer Show. Morgan County Repeater Assn. East Pavillion Bldg. Indiana State Fairgrounds, 1202 E. 38th St. 8 AM. Admission $7 plus $2/parking. Info http://www.eb1.com/mcra

March 19 (Sun): Sterling, IL - Sterling-Rock Falls ARS. Field House at Chailand Middle School Gymnasium, 1700 Sixth Ave. Admission $4. Open 7:30 AM. Talk-in 146.85 MHz repeater. info: Lloyd Sherman, KB9APW, PO Box 521, Sterling, IL 61081-0521. tel. 815-336-2434, E-mail: lsherman@essexl.com

Mar 25 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

March 26 (Sun): Grayslake, IL - Lake County Fairgrounds. | North Shore Radio Club (formerly LAMARSFEST.) http://www.ns9rc.org. ALL INDOOR, Radio, Electronic and Computer Swapfest V.E. Testing 9AM to Noon, Door Prize Drawing Every Hour, Admission $6 at the gate / $5 in Advance. Door Open at 8 AM. Set-up at 6AM. Free Parking. Cafeteria Open. Talk-in Simplex 146.52 & NS9RC Repeater 147.345 +.600. For NS9RCfest Information Call (847) 291-4160 until 10 PM. Info: Jacob Fishman, KF9ZF, PO Box 1066, Highland Park, IL 60035. Phone: 847-291-4160, Email: kf9zf@lightwriters.com

APRIL 2000

Apr 7-8 (Fri, Sat.): Milwaukee, IL - AES Superfest at AES | Milwaukee store, 5710 W. Good Hope Rd. 2PM-7PM. (Fri.), | 8:30AM-4PM (Sat.) 35 manufacturers. Free Admission, |

manufacturers reps, flea market, forums, as well as store |
specials and closeouts. Also Radio Recyclers next to AES. |
For further info call Ray at (414) 358-4088, email at |
raykhk9w@aol.com or check out the Web site at |
http://www.aes/jam.com |

Apr 9 (Sun) - Stoughton, WI - Madison Swapfest. Mandt Com- |
mumity Center, Stoughton Junior Fair Grounds, Stoughton WI. |
Doors open at 8AM. Tickets $5. talk-in on 147.15 repeater. |
Info: write to (SASE) MARA, Box 8890, Madison, WI 53708- |
8890. Swapfest Info Line (608) 245-8890 24 hrs/day. |
http://www.qsl.net/mara |

Apr 15 (Sat): Grayslake, IL - Computer Country Expo (see
below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Bel-
videre Rd.) & Rt. 45. 4 miles west of I94. Admission $6,
or $5 with discount coupon available at WebSite.

Apr 29 (Sat): Stickney, IL - DuPage ARC. Hawthorne Race
Course, 3500 S. Cicero Ave. Admission $6. Talk-in 145.25
repeater. http://www.w9dup.org, Info: Ed Weinstein, WD9AYR,
7511 Walnut Avenue, Woodridge, IL 60517. Phone: 630-985-
9256. Email: DARCHamfest@aol.com,

Apr 30 (Sun): Arthur, IL - Moultrie ARK. Info: Ralph Zan-
cha, WC9V, PO Box 55, Lovington, IL 61937. Phone: 217-873-
5287. Email: rzancha@one-eleven.net

Apr 30 (Sun): Glen Ellyn, IL - Computer Central Show (see

Perhaps he is the sort of old-fashioned person who takes pride in doing something that requires a bit of dedication and effort.

I'll never win any Olympic gold but, at age 55, I still run a marathon each year.

It's known as personal challenge.

It's one of those things that, if you have to ask, you would not understand the answer.

Slow down around Jct. 71 at Columbus. There is always a DPS shooting radar most of the time. Also a SO at the Bexar county line and a SAPD at the city limits. Good Luck.

Thanks everyone for your input.

I decided that what I wanted most right now was the ability to monitor
SW broadcasts. I bought a RS DX-398 (Sangean ATS-909) on sale for
$199 I'm really pleased with it's performance and I'm listening to
Radio Havana, Cuba as I type.

I may buy a trunking scanner soon, as I think that is the next logical
step.

Thanks,
Jim

It gives a sense of personal accomplishment. Something similar can be
obtained by getting the ARRL CW speed endorsement stickers (I assume
that the program will be continued).

I don't know about you, but the things in my life that I appreciate the
most are the ones where I had to exert effort to accomplish.

Sure, and there are many CBers love to wave the fact that they can talk
DX without a license in the face of Hams.

There are such people in both groups. Most Hams and CBers just get on the
air and operate - and do not brag about what license or station power they
may or may not have.

Exactly. I will be getting my Ham license again, after a lapse of about
20 years. It will be the Extra Class license. I plan on spending just
about all my time in the CW segments. After all these years of not
being able to get my speed above about 10 wpm by listening to the code,
I am hoping I can do so by actual on-the-air practice. The Novice
bands were hopeless - few seemed to be able to manage over about 8 wpm.

Source record: 91809

I have one. Very good radio for a dual conversion, very fast, 100 fps. But DON'T buy it if you want to do much cell reception. The mod for the units that are old enough--about 7-94 and before--are not like mods for other scanners, they don't allow you to do a limit search (which does a continuous search through your selected range of frequencies) in the cell band at all, all they do is let you get in there and do a direct search, if you allow it to get out of the cell frequency area, it reblocks that area and you have to punch buttons and get back in manually, then restart the direct search. You have to constantly watch it as you do a direct search and not get out of range--impossible to do while you drive, or if you are in the dark, etc. At the blazing speed of 100 fps, it can get out of range very fast. The price for a clean pro 51 should be about $100. People pay lots more than that sometimes because they don't realise the limitations--it is just not a pro 43 or 37.

Source record: 91816

Hey everyone thanks for all the input. I'm really impressed with the high level of information I obtained publicly and privately from this group.
It's interesting to note that the Japanese language station is "piggy backing" on an FM rock station. They are NOT selling subscriptions to listeners, only the radio (about $100). Maybe it was cheaper to start a SCA radio station than a regular station? Maybe the station license is less expensive in a big radio city like Los Angeles? I don't know. I do know that they sell the radio but are not selling any subscription to the broadcasts. Maybe the broadcasts have commercials? I'm not sure about that. If anyone knows where I can get an FM radio that receives SCA, let me know.
Erik
PS I'm also a HAM and the "6 new CB channel" thread is absolutely hilarious! I haven't laughed that hard in months.....:

Is there something funny going on here, or have I just not noticed this before?

The freqs I've always listened to LASO City of Industry and LASO San Dimas/Walnut now have GOBS of calls for Palmdale and Lancaster units. What on earth is going on here? Why would deputies in my area sit still for listening to all these traffic stop info's, crime broadcasts and L-TAC requests, etc., from cities like 100 miles away? Have they moved Walnut (I still here the occasional call for Walnut on this freq, and Industry there, too) freqs somewhere? Are they using CTCSS or some other kind of encoding that filters out these long-distance calls?

Better think of a switch unless monitoring only strong signals.
Remember: You will have at most 1/3 or the RF-Power from the Antenna
on each receiver. (assuming that the coupler is lossles, which is not the case)
The gain of a 3dBi antenna is more than eaten up with this arangement.

Consider a Stridsberg MCA-204 active multicoupler, which contains
a low gain preamp to overcome the losses inherent in splitting
a signal 4 ways.

Mine works well. I published a review in Feb. 2000 Monitoring Times
magazine.

See the manufacturer's web page at http://www.stridsberg.com for more
info.

There's 2 tones I've heard on LASO freq's. I know what one of them is, the other I can only guess at.

There's the one you hear all the time, whenever a mobile unit responds. It's called a "busy tone" and lets other system users know that someone is talking at the moment. But you can have some fun and impress your friends with a neat trick. Say, for example, you're listening to Dispatch 5 on 482.8625. You can plug in 485.8625, and if you're close enough, you'll hear what is actually being said instead of "beep, beep, beep..." Scanning newbies love that one...

There's another tone that I've only heard in the early AM hours when the channels are relatively quiet. You'll hear a longer version of the busy tone, it usually goes "beep beep beep beep beeeeeeep beep beep beep beep beeeeeeeep" for sometimes 2 or 3 minutes at a time. THAT gets annoying real fast. I don't know what that is, maybe someone who works for LA County communications could enlighten us, but it seems logical to assume this is some nightly test they do.

This is based on information I gathered about 2 years ago now, but I think they still use this system there. Guess it's time to go visiting again!

Nope. Probably more like the same dispatcher that works Walnut is also
working Palmdale/Lancaster. They patch them together. Listen closely, I
noticed this when I lived in the Lancaster area. Is the voice the same for
Lancaster traffic as it is for Walnut? If so, then that's it. Not enough
dispatchers or radio traffic to go around. Good old SRC... I miss listening
to them.

Source code? To transmit?! Not likely. There are some commercial apps out there that when combined with a laptop and radio modem, could do the job, but they don't come cheap. Since you want source code I take it you want to save money.

You've posted related questions before, each one a little more unusual than the last. What are you guys planning to do with this set up anyhow? Last post from you said something about taking in data from the MDT channel and saving it to disk, which existing software can do. Now you want to transmit? You've got my curiousity piqued Aaron. What exactly are you guys up to out there?

You can reply via email if you wish not to share with the rest of the class.

Hi Erik,

If they are on simple analogSCA, you can build a decoder for a few buck using a PLL chip. I am sure Ramsey or FAR must have the boards for this. I recall building one some 20 years back.

>

Hmmmm... I dunno 'bout that one..

I mean, these things are not made by NASA, OK? I'm certain there are no "unlock codes" or unusual modulation schemes. It's a vibrator fer chrissakes! I'm guessing 49MHz NFM, 1/4 watt or less. Anything fancier would cost too much to make!

You wanna have some fun? Why hack it? Just buy one and take the remote to the bar and push the button! Think about it, they probably do operate on the same freq - they're not designed for several different ones to be used at once! Well, some really adventurous girl might want to try that, but most women only need one. Hell you could probably ring someone's el-cheapo cordless phone with one...that would be a good joke.

Jesus, radio controlled vibrators, just what the world needed. May our children forgive us.

Hi Ted,
Monitpring Times has an ad for an active multicoupler.
If you can put up with 5 or 6 dB loss, a simple MATV splitter (they do make 3 port splitters- some have one port -3 dB while 2 are -6 dB and others are = -4.5 dB/port)
They have good isolation/ return loss characteristics from 50-700 MHz and may not be too bad at cell freqs. Don't let the 75 Ohm design Z worry you- they perform just as well w/ 50 Ohm terminations.

It's called "bragging rights". It's nothing more than the ability to
tell a newcommer that you earned your license the "old way", which is
SUPPOSED to convey some sort of superior status over newcommers.

Strictly an ego thing.....

The ARRL Repeater Directory is readily available from virtually any
amateur dealer or directly from the league for about 7 bucks.

Well, if it's mostly local, just use a good quality TV splitter... And
I'd
use good shielded RG-6 TV line as well. There's a lot of TV stuff
that works incredibly well for scanner use.

Amps are another thing to consider. But be carefull, as not
all TV stuff is the same. 'Broadcast' amps don't cover the same
ranges as cable amps. So pick what you want to use carefully.
They DO make some small amps for 'broadband' use that are
basically about 50MHz to 1GHz, but they aren't that common at
Radio Shack. (Although you CAN get them through
RadioShack.COM!)

In fact, Radio Shack, back in the early 70's, sold the SAME amp
with minor differences as a 300 ohm TV amp, a 300ohm input
75ohm output TV amp, and a 50ohm in/out scanner amp. The
little red box up at the tower, the gold box that plugged in the wall
with two connectors on it down in the house. (They worked quite
well, but they were prone to 'oscillation' if you had output leakage
that could get back to the antenna input. I've heard of horror
stories of people that would make the cables 'neat' on the 300ohm
unit and tie them together, and the amp would oscillate and totally
destroy all reception for miles!)

However, you should be aware that a lot of scanners, especially
older units, radiate like crazy back the antenna feed. This can
cause problems with 'splitters', as they DO allow some degree
of coupling 'back through' the device.

Another solution is to just use a TV distribution amp. However, be
aware these are 99% of the time an amp followed by a splitter. And
you have the same problem as with just a splitter if you have equipment
that radiates back the antenna feed.

BUT, you can split and THEN put an 'in-line amp' for each scanner.
I know, I know, technically this sucks, you should amplify and THEN
split, but by splitting and then amplifying, the amps will usually block
any leakage in the back direction.

Mike

Las Vegas frequencies for the visitor (use these few and you can get an interesting taste of the city and not get swamped in the several hundred active freqs, all the interesting stuff is here):

Las Vegas Metro Police (covering Clark County and City of Las Vegas)

Southeast Area Command, Channel 2, includes the Strip 159.0900, tone 94.8Hz
car-to-car, Channel 8. a must. 156.2100, tone 77.0Hz
surveillance, recently active 155.9400
McCarran Airport 155.880 tone 94.8MHz
Downtown Area Command, Channel 4, includes the downtown casinos 158.7450, tone 77.0Hz

_____
Lake Mead Recreation Area (fed) 166.300, always active, includes the inevitable search for lost boaters

_____
Clark County/City of Las Vegas Fire Departments. These share a trunked system with some other county services:

Motorola hybrid IIi. Fleet Map E1 P15
Frequencies:
855.7125, 856.2625, 856.4375, 856.7125, 856.7625, 857.7625, 858.7625, 859.2625, 859.4625, 859.9375, 860.2625, 860.9375, 856.2125, 857.4875, 860.4375, 860.4875, 859.4375

41808
41010
40976 Channel 1 City East
41008 Channel 2 County West
41040 Channel 3 County East
41072 Channel 4 City West
41104 Channel 5 North Las Vegas Fire
41136 Channel 6 City South
41264 Downtown/Airport
41424 fireground
41744 fireground
41009

(marginal) add in:
Clark County Department of Aviation
100-2 McCarran Airport Control Center (not the tower)
100-7 McCarran Airport Security (as in FAA security), includes other services

Hello all,

I have decided to sell my icom IC-R2 unblocked (i.e. cellular capable)
receiver. The radio is in excellent shape and comes with the original
box, belt clip, instruction manual, and programming software.

Here is the link:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=286056931

Bidding starts at only $100.00. Good luck and thank you for your time
and interest.

Sincerely,

Greg

This is a decent eval of the unit. I've had mine since '94 or '95 and it's my newest. I don't
use it as much as my Pro-2005, but as a second radio it works great. It's a good sounding radio and I haven't had the interference problems others have talked about here. Probably because I am located in "suburbia hell" with no large transmitter stations close by. Haven't
had the squelch tail problem either - possibly limited to a specific run of the radio?

This person is obviously unfamiliar with the modern methods of tract
homebuilding. These days it's common for entire enighborhoods to be
constructed at the same time by the same builder, assembly-line style.
This means that ALL the houses have the SAME brand and model of
garage door opener - the only thing that keeps your transmitter from
opening your neighbor's door is the (usually) 3-digit combination code
setting. It's not difficult to produce a device that will transmit all
possible codes, one after the other. You can sit in your car with one
of these and watch all the doors within range open. Thieves use these
devices all the time - that's why they now make "security" door
openers with a pseudorandom "rolling code" sequence.

>> You're fantasizing if you think you can trigger all of them at once.

Not simultaneously, but within a few seconds of each other is
definitely possible.

Note: Spam shields raised (with rotating shield frequencies). Please post responses to
this newsgroup.

The sample PDF I downloaded was great, however I don't think I'd want to download it over a 28.8 or even a 56K link. If you have DSL or a cable modem it's probably great. One thing I'm not clear on - will Grove keep these available so that one can redownload these at will or is it a one time download?

Personally, I have been bugging Bob to get all of the back issues on CDROM and sell those for a few bucks. I'd happily pay $50 or so per year for an archive of all the articles. ((Especially now that I lost all my back issues - since 1991 or 1992 - in a fire! :-( ))

I'm looking for the following frequencies or an idea of which freq. spread to look in.
These are all for the Pocono Raceway for the Pocono 500 in June.

Ambulance Services - H.A.T.S.
Medical Volunteers Corp.

Medivac Helicopters

The A/C common freq for the private choppers using the helipad at the raceway.

Thanks for any ideas or assistance,

Rich

I heard the same thing (although I heard the increase was a little
less). Bummer!

The only possible good news in this is that the radio cost that much
more to build because they put in such a good front end/receiver!
Please let that be true!!!

Anyone know what the metal is in the "metal hydride"?

One downside of NiMH batteries is their high self-discharge rate.
My old laptop batteries used to go from a full charge to dead (0 volts!!)
in a month on the shelf, outside the laptop itself! (NEC UltraLite
batteries, for the curious.)

You can get active (if the signal drop of 6 db that you get will bother
you that much) or passive (if the noise figure of an active splitter will
bother you).

Wrong. Nickel-Metal Hydride. The challenge in batteries is they
produce gas. To make the reaction reversible, the products of both
charging and discharging must remain inside the battery and be
re-usable. In a Ni-Mh battery, the evolved hydrogen form a hydride (a
weak bond compound) at the electrode.

As I recall, most of the RS amps list the feqs they work for. Try to find one (likely a cable TV amp) that can boost signals close to the range you wish to hear. I remember doing this years ago, however I cannot recall the model of the amp I used. It was similar, if not identical, to part number 15-1115 on page 190 of the 2000 RS catalog.

GEE - why don't you guys answer the mans question instead of going off on tangents, especially without checking your facts.

The amount of time you get on a set of batteries depends on the capacity of the cells rated in mAH. Higher mAH cells will give you longer "play" time.

I imagine the AR8000 has a built in charging circuit only for NiCads. If so, you will have to charge the NiMH cells outside of the radio as the charging characteristics between the two cells are different.

Supposedly the NiMH batteries cannot be discharged/charged as many times as the NiCads.

You may be better off looking around for high capacity NiCads. Check manufacturers web sites for definitive information before buying. Some research ahead of time might save some money. I switched to high capacity NiCads myself.

Regards
Max

I bought a number of AA NiMH cells from Thomas Distributing
(http://www.thomas-distributing.com/index.htm) and have had great success
with them. The difference between the 1200 mAH and others is in the
capacity, not the delivered voltage. The receiver will work well with any
of them.

Note that you will need a charger that specifically handles NiMH cells;
your old NiCd charger won't do the job.

I have been using Radio Shack NiMH cells in an AR-8000 for almost two years, charging them with the built-in charger the whole time. Aside from slightly more heat in the battery compartment during charge, the NiMH cells have performed flawlessly.

I would guess I get about twice the time per charge I used to get with whatever cheesy NiCd cells used to be in there.

I'm running an Alinco ham HT with a battery pack converted to 1350 mAh
NiMH batteries. They charge up just fine in the included NiCD charger,
although it takes about twice as long to charge them because they have
about double the capacity. WARNING: YMMV. But for trickle charging, I
understand that there's no real difference in what you need to charge
either type.

>Supposedly the NiMH batteries cannot be discharged/charged as many times as
>the NiCads.

True, in theory. But in practice, I think you get more for your money
from the NiMH batteries. NiCDs are old technology and have a lot of
problems that NiMH don't have.

Mine does, but it's a trickle charger. Decide this for yourself, I
don't know if it will work with every sort of trickle charger. For fast
charging, I use a dedicated NiMH charger.

Talked to Bruce with the NHP communications this week. NHP did in fact go to the VHF-Hi band. These same freqs will be used for trunking starting July 15th. The system will be the Motorola Smartnet. As of right now, I do not have the freqs. He faxed them to me however my fax is down. Bad time to find out. Will provide more info as I get it. By the way, it is possible that Las Vegas Metro will use the NHP trunked system at a later date.

Here in Okaloosa County Florida, the Sheriff's Department has started using this to indicate a channel is under 10-33, or emergency traffic only. However, it is only a beep, so perhaps it's not the same thing you're talking about.

The beep alerts all the deputies not to use that channel for routine traffic. Once the frequency goes off of 10-33 status, the beep is turned off and routine traffic resumes.

Why would you say something like that? Have you had a bad experience with vertical dipoles? Math with division scare you? Please, expand on your brilliant proclamation regarding you butt antenna. Unlike you, I have no experience with antennas taped on my butt, you obviously come out as the expert there and many would love to hear more on your experiences with this novel idea.
I've been using the antenna I described below since 1996. It works well for me compared to a discone, a Channel Master, and a Cushcraft 270 for general scanning. It's quite basic stuff actually. OTOH, you seem like the type to be impressed by paying triple for a vertical mounted TV antenna from Grove and calling it a scanner antenna. Okay, I believe you do butt antenna experiments. You are the butt antenna MAN Charlie!

Another one of the many reasons why you should not shop at Radio Shack.

Exact text of messages regarding service manual for a scanner: (sorry,
that it's long, but I wanted to include all of the text.)

==========

We are sorry, but it order to meet our commitments to the FCC we are not

allowed to release the schematics other than to our service centers. We

suggest that the owner drop off the unit at the local RadioShack store
to be tested and/or serviced.

To better assist you with future questions, please respond to this
original email with the REPLY option.

Thank you,

Tandy Product Support Center

NexCell now makes 1500 and 1550mAH AA cells!

And it's no "marketing hype:" For maximum lifespan for your cells, you
MUST use a charger that is designed for NiMH cells.

NiMH cells come to us at a price: They will only last 1/2 to 2/3 the
total charge-discharge cycles as do modern NiCads. And chargers for NiMH
take HEAT into consideration - which is a dire enemy of NiMH cells.

Yeah, about 200% of the "street" prices, and substantially higher than MSRP, which practically nobody uses to set actual sale prices!

Notice that every piece of equipment is shown not quite clearly enough to identify, and has a special catalog number that does not in any way indicate just what is being sold. I wonder if this guy is an authorized dealer for any of the stuff he's reselling.

Oh, by the way, one cannot sue for libel unless the statements made are in fact untrue. Maybe Mr. Gudin retracted his inflammatory rhetoric after his attorneys set him straight on the law.

All well and humbling to you

This God-in has one thing that none of you can interfere with.

he can put a price on any thing he wants to based on his assessment of
the
"what the market will pay" and live accordingly.

Most people who charge fair prices live in nice houses and apartments

reflecting on their good furtune and charging what the market wants
to pay.

Now, if God-in wants to charge HIS prices, then they be HIGH and the
ALMIGHTY
dollar people SACRIFICE will determine the SALVATION this seller
maintains. HE
can then go back to living in his cave and awaiting his reward. No
one has to agree or
disagree with what he prices at.

No one has to buy.

Further, anyone has the right to comment on any price set by any seller. It is part of the free market system, it's part of the process whereby a consumer becomes informed.

Caveat Emptor is wisdom in two words. But the need for that wisdom is precipitated by opportunism applied to a buyer that is unaware, unknowledgeable, or ignorant. If the buyer is to beware, he must be informed and the comments suggesting Mr Gudin's prices are way the F*CK out of line, and his listings are, if not misleading, they are at least not fully disclosing, serve teh purpose to inform potential buyers.
Yes he may charge what he wishes for his thinly disguise ICOM R-10. And those of us in the know may shout it from the rooftops that the same R-10 may be had for less than half the price through a less suspicious dealer.

Each within his rights, and each part of a free market economy.

Part of teh system of checks and balances that ultimately protect the consumer, while allowing free and unrestricted access to goods and services.

Hello:

I was wondering if anyone might know of any sites that have Las Vegas 800 & 900 MHz scanning frequencies. Any help would be appreciated, I looking for some of the Hotels frequencies also.

Thanks
Jerry

6216. Ham rule changes

Newsgroup: rec.radio.scanner
Date: 2000-03-18 00:00:00 UTC
From: Ralph Mowery <rmowery@dialpoint.net>
Message-ID: <38D3763F.2444F11E@dialpoint.net>
Source record: 91856

The code requirements have been lowered to 5 WPM for all classes. The hams keep the class they have, There will only be Tech , General, Extra licenses issued after April 15. The Advanced will continue to be used but no new ones issued. The Tech that were licensed before a cutoff date around 1985 can show proof and be upgraded to General without taking any tests.

HAM is not an ackronym. No one really knows why Amateur Radio operators are called Hams. There are about 3 or 4 stories on that. It is just a word that is used to call the Amateur ops that came along. Sort of a nickname.

Nope....What acually goes on here can be easily "viewed from a distance" so to speak.
When SRC is slow...Not too many calls etc. They will assign one dispatcher to several specific service areas. This results in several frequencies being simulcast with the same dispatcher so he doesnt have to switch them himself. As the calls for service increase, you will notice that less simulcasting is monitored as they have had to assign more dispatchers to operate single areas. It can give you kind of an idea of how much traffic the county is handeling at any one time.

Vince, with all due respect, why are you burning so many bridges? Logically
you are accomplishing nothing but contributing to your own demise.

Restructuring certainly was NOT the ARRL's idea, or even their submitted
alternative plan. The FCC brought this on, if you are upset, direct it
towards them. I feel it was a long time coming however, so I suspect
anything you will do would probably be futile.

Please try to refrain from crossposting to eight newsgroups.

People don't realize this about the FCC: If they had *really* wanted
to "destroy ham radio", all they would have to do is to do *nothing*.
It plays right into a bureaucrat's natural desire for inaction.

Their R&O, on the other hand, is every bit a *hard* dope slap to the
bitter old meanies, including not a few of the ARRL, that change has
to happen to save their (and our) beloved service; it's an effort to
save us from ourselves.

I would not cry if some of these bitter old meanies departed us. Not
a bit.

Take care and 73's,

I dunno, but item L-16 on
http://www.intercept-spytech.com/CounterSurveillance.html looks an
awful lot like the Optoelectronics Xplorer. ;-)

>Oh, by the way, one cannot sue for libel unless the statements made are in
>fact untrue.

Not true. One can SUE for anything one wishes. However, one is
unlikely to PREVAIL unless one can prove that libel has, in fact,
occurred. It's unfortunately all too common for a frivolous lawsuit to
be filed solely as an intimidation tactic. It's used to bully the
"little guy" who doesn't have the money to pay the attorney's fees for
defending the suit into an out-of-court settlement, usually under
terms dictated by the bully. I guess if you're selling $699 Opto
Xplorers for $1650, you have plenty of extra cash to file lawsuits.

I have a Radio Shaft CATV amp. It actually makes the picture on my TV
WORSE - I can't imagine it would help in any way with your scanner's
reception.

Try using a good quality amp like those made by ChannelPlus. I use
these in my whole-house TV distribution system with excellent results.
IIRC, they go up to around 1GHz, more than enough for the 225-400MHz
band.

In such a case, the defendant can file a motion for summary dismissal on the grounds that plaintiff has failed to state a cause for action. If accompanied by proof that the statements are not false, a judge should throw out the suit before anyone is forced to hire a lawyer. The legal threshold for "libel" against a business is a little higher than that for a private individual, too. If Mr. Guldin has ever taken actions that would in any way make him a "public figure," he would have to prove a lot more than just false statements to win a suit. Under the circumstances given involving Mr. Wells' website, that would be impossible.

Anyone faced with a problem like this should, of course, consult an actual attorney and not just blindly follow the ravings of us lunatics on Usenet before getting involved in real trouble. Most cities have a "legal aid" type of service where one can consult for a short time with a lawyer for free.

Geez! How can you write with such certainty? As of today, there is NO scanner availble that will receive digital transmissions. The trunktracker II will track Motorola and EDACS as well as conventional but only in the analog mode. Please get your information correct before you post such misleading junk.

I used a RS TV amp for years with a Channel Master antenna. With it I was able to hear MilSats and such. Without it there was silence from space. I picked the one not with the highest gain but the one with the lowest noise figure. In you case, worse that can happen is you take it back to RS.

Precisely. That's why I mentioned a CPU in my post.

Exactly how much extra expense will a maker of remote controlled vibrators
incur to insure that control of their devices don't fall into evil hands?
:^)

As for "rolling code" devices, I question how well they'd work in real life.
There'd have to be two-way communication between the key and the lock,
otherwise what happens if you press the key a few times while out of range?
Phhfttt!

Ron of that ilk.

No John, Scott is correct. You're right about the scanner getting it's info from the control channels.. but an innovative feature of this new scanner is that the ONLY thing you need for the Motorola systems are the control frequencies.. the scanner does the rest. As part of the data overhead transmitted on Motorola systems is information that allows the radios to determine which frequency to switch to. What I haven't confirmed is whether or not the 780 has this feature for EDACS ...

Make a fan or multi-legged dipole. (length of dipole is 468/freq in MHz)
PVC pipe is a bit longer than longest dipole. Cut PVC in half to add Tee for
coax exit. Antenna is inside PVC, I secured ends of dipoles by drilling a
couple of holes where end was and threaded it through and secured with hot
glue.Mount vertical.

Only to those who are not going to be able to force Morse Code on to people, they will be quickly be made the fool of when it is entirely removed as a requirement in 2003.

They will also be quite amazed to see how Morse Code will take off and become more popular than ever in the second half of this decade when people turn to it as a fun nostalgic mode when it is not something that is forced opon anyone. No one wants to learn or do anything that they are forced to do "just because" someone said so. Wait and see how many people decide to learn it on their own once it is something to learn and do JUST FOR FUN! Wait and see!

I had to learn it "just because" I had to in order to talk on a microphone on HF. (as silly and illogical as that sounds) and never used it ONCE after getting my license. Once the code requirement is removed, I will be one of the first to relearn the code (have since forgotten all but 4 or 5 letters of it) and start using it once it is not a forced upon me like some rapist.

There's 2 ways I know of that the kbd will lock up: Remote mode and Locked mode.

Remote is set by holding down the "E" key for a few seconds 'til it double-beeps. Locked is set the same way, but with the DLY button. In Remote, the key icon flashes. In Locked, the key icon stays steady ON. Both can be reversed the same way they are activated.

Got an old Electra Bearcat Scanner with a Bent ^ tenna?
Well, today's your lucky day. We're running a special on
Bearcat Telescoping Antennas, just to get you to eyeball
our cool mini VHF pocket scanner. So here's the deal:

1. Come to our website: www.electracorp.com
2. See Electra's TigerScan. Hmm, why didn't we use springs before?
>>Maybe you'd like to have your own second generation 'Little Tiger'!
3. Leave us an email, ordering up to 10 antennas per customer.
4. We'll sell you what we have for $3.50 each (that's right, three-fitty)
considerably less than the price of a new antenna, if you can find one!!!
(Please add $1.00 for shipping; and 5% sales tax if in Indiana)
5. Upon receipt of check or money order, we'll send your Electra
Bearcat Antennas out same day via U.S. mail in a padded shipper.
6. You've got reception, we've got space, plus 3 1/2 bucks :) WIN-WIN!

Notes: We also have crystals, AC power cords & manuals, but NO REPAIRS!
(See Gerry at G&G). This offer ends when we run out of stock (my guess is a
couple of weeks).
Sorry, fresh out of portable/rubber duck style antennas (BC-100, Four-Six,
and so on).

Best regards,

Dave Lovell - W9DAG
Pres. - Electra Corporation - 'The Originators of Scanning Monitors'
P.S. - WE NEED TIGER SCAN DEALERS! If interested, please advise.

While it is a good idea not to read attachments for .exe and .com files,
if you look closely, it was not an attachment but rather an http link to
a .wav file. Virri cannot be passed via a .wav file.

Get a cardboard box, wrap about 100 turns of .020 enameled transformer wire
around this box. Tape it to your butt, you'll get the same results as below.

6255. NV Highway Patrol Trunked

Newsgroup: rec.radio.scanner
Date: 2000-03-18 00:00:00 UTC
From: sascheffey@aol.com
Message-ID: <20000317192501.21849.00001435@ng-co1.aol.com>
Source record: 91936

Here's the latest on the NV Highway Patrol. The "old" freqs in the 42MHz are obsolete. NHP is now using the VHF-Hi band which will become the freqs that will be trunked starting July '00. The freqs are in the range of 150-155. The following freqs are for the Las Vegas area, however they are constantly turning freqs on and off while they set up the trunking system, it's a hit and miss each day. My recommendation is to search the VHF-Hi band until the trunk system is finalized. They will be using a Motorola SmartNet system for trunking.

151.1075-Apex Primary
151.0925-Arden
151.130-Local
154.695-Goldfield,Tonopah,Warm Springs
151.070-Pahrump
150.995-Laughlin, Alamo, Indian Springs
151.040-Mesquite, Glendale

Available immediately - 88 multi-channel repeaters at bargain prices.
Original cost $47,000,000 each, now greatly reduced. Hardly used. Kept in
a non-smoking environment. Previously used in a (very) mobile application.
Includes self-contained power supply and antennae (tower is not required).
Must be removed from current locations to make room. Overnight delivery
guaranteed. Please specify latitude & longitude (it is suggested that buyer
not be at home at time of delivery).
For additional information, contact Iridium Corp. or the U.S. Bankruptcy
Court.

I am really getting tired of hearing about how bad HAM RADIO is going to be. I think it is going to be great. The worse thing that I can see is the mentality of some of those who are doing all of the crowing. But like it or not, change is coming my friend. Look at it as an oportunity and it will be. look at it as a problem and it will be. Why don't we offer to help the new people by making this a program of attraction. Set an example. Why not give it a chance ?

The only thing I see happening by all of this talk is that this newsgroup is going down the dumper

This Stevie Gudin guy seems to be quite a little baby, and is throwing a tantrum because knowledgeable people are (publically) expressing the opinion that his business is charging prices for commonly available scanner gear that are way above the norm.

In regards to his prices, I imagine two possibilities:

1. The firm is being ripped-off by wholesalers, and the business is actually just charging a reasonable markup on the unreasonable wholesale price THEY are paying.

2. They consider their scanner-gear clientel to be 'unsophisticated,' and based on that, (greedily) believe they can get away with selling the radio products at exorbitant rates.

IF #1 is true, it suggests to me that the firm has a lack of competence when it comes to research & investigatory matters, to wit, a failure to determine reasonable wholesale prices...

IF #2, it tends to speak for itself...

Gudin's conduct, as demonstrated by the alleged email he sent to the Strong Signals web page people, is pretty pathetic & would lead me to believe the potential scenario #1 listed above.

However, since Gudin has apparently been placed on-notice that his prices are very high and yet he hasn't done anything to lower them, but instead responded in an immature fashion, potential option #2 is just as likely! :)

To top it off, the 'Intercept Investigations' web site's Communication page now lists a dire warning called "About 'Strong Signals' & Publisher 'Rich Wells'" which insinuates that there will be soon be info posted about Strong Signals Web & it's operator, UNLESS Strong Signals apparently redacts whatever info from its web that has caused Gudin to 'soil his diapers.'

Such conduct on the part of Gudin/'Intercept Investigations' is astoundingly unprofessional in my opinion, and in itself should warrant a lot of concern from clients & potential clients of that firm!

Other parts of the 'Intercept Investigations' web page goes into detail about how difficult it is to receive P.I. licensing in Nevada, and how professional their staff is, etc. I think any 'professional' staff at that firm should be very embarrased by Gudin's conduct at this point in time.

More importantly, the variety of entities involved in the licensing of businesses and the regulation of P.I. firms in Nevada might be very interested to learn of 'Intercept Investigations' threatening tactics, apparently all due to some dude publically saying they've got extraordinarily high prices for scanner gear... It sounds quite immature to me, but more importantly, also seems rather unethical.

I suppose some that think Gudin is a twit might take it upon themselves to create some flyers regarding their opinion & their research into scanner pricing, and send the flyers or letters via facsimile & mail to various law enforcement agencies in the Las Vegas area.

I hope that the operator of Strong Signals will call 'Intercept Investigations -- 'Spy Technologies' (gee, I thought any decent intel/investigatory firm tended to shy away from the 'spy' word...) bluff. If the firm is dumb enough to post some potentially humiliating info, it could then in turn create some interesting ethical and perhaps legal scrutiny back on 'Intercept Investigations -- Spy Technologies.

I suppose that could happen but every time I have used the trunker program
to monitor a system all frequencies were found within a very short
time...within hours. These were up to about thirty channel systems.

Whatever the case, this will certainly be a welcome new capability.

6268. Dept Store and Mall frequencies for the San Francisco Bay area?

Newsgroup: rec.radio.scanner
Date: 2000-03-19 00:00:00 UTC
From: "Robert H. Eisner" <rheisner@pacbell.net>
Message-ID: <38D584D0.7624@pacbell.net>
Source record: 91699
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Hi All,

I'm currently in the process of compiling a list of Dept Store and Mall frequencies for the San Francisco Bay Area. The following is a list of frequencies that I've managed to compile over the past couple of months and all of them have been verified.

If anyone has any additional input please post them to the group or e-mail them directly to me.

I'm still looking for the JC Pennys, Macys, Mervyns, Sears and Wards frequencies for several of these Malls. Please note that I'm looking for CONFIRMED frequencies, not the ones that are listed in the Percon and FCC files.

I had the same problem w/mine and the release key wouldn't unlock it. The way I solved the problem was to press TRNK button and hold until two beeps, then press any bank number, then choose E2 800, then press E for Enter, then enter some ungodly freq. number and press E again and you should get an error code. Then press TRNK to turn it off and the Key symble should be gone. This is all on pages 39-41 in the manual for programing
TRUNKING freqs. Hope this helps, it worked on mine twice now.

6278. Re: PI's from Vegas attempt to legally Harrass Rich Wells

Newsgroup: rec.radio.scanner
Date: 2000-03-19 00:00:00 UTC
From: Tim Tyler <ttyler@mich.com>
Message-ID: <38D46330.9196D5A0@mich.com>
Source record: 91763

Here's the reponse that the Gudin twerp made to my post, which was sent to this newsgroup, the PI newsgroup, and directly to his company's email address:

Interestingly, his response was only posted to the PI newsgroup and sent directly to me. He deliberately took rec.radio.scanner off the distribution list.

ALSO, Gudin is getting slammed quite a bit by a variety of people in the alt.private.investigator newsgroup, so I encourage everyone here to go take a peek & enjoy the show.

Further, I hope that many of us will comment regarding his prices to the manufacturers of the radio gear he sells (sending them copies of his web page advertisements), and also as concerned citizens, contact law enforcement agencies in the Las Vegas area and share your opinions regarding the prices his firm has.

That little monkey Gudin has removed his radio gear web page now. Hopefully enough people have already copied it & can send copies to Icom, Optoelectronics, Startek et al. Maybe Gudin isn't even an authorized dealer...

And as for some of the other items on his web (some of which aslso seem quite overpriced to me...), if the USCS/FBI, et al/ went after Ramsey, it looks like there's clearly some reason for them to be interested in 'Spy Technologies' and we can turn what has been some stupidity on the part of the FBI & USCS into something beneficial for us! :)

Anyway, enough rambling. Gudin talked big & bad, but like most pussies, he (as evidenced by his sudden web 'restructuring') beats feet when challenged.

Here's his reply to my posting:

****

From: Intercept Investigations <mail@intercept-spytech.com>

12:38 AM

Subject: Re: PI's from Vegas attempt to legally Harrass Rich Wells

Tim,

The first thing that becomes obvious is the 'subject' of this thread. Did you even

notice the word 'legal'? Just when I thought I had seen the stupidest
of the stupid,
you come along and reaffirm my sincere belief that even more moronic
people are born
every day. You should be more embarrassed by your spelling than I need
be with my
business practices.

Each and every one of your comments below are INACCURATE, LACKING IN ANY
FORM OF
INTELLIGENCE, WITHOUT SUBSTANCE, and HAVE NO BASIS IN FACT. There has
never been,
nor will there ever be, any form of a threat made against anyone by me
or my
business.

Your invention of a 'threat' is insulting and juvenile. If a threat was
EVER made, I
ask that you bring it forward for all to see. Until then, your
accusations are as
baseless as your 'organization'... the "National Association for the
Advancement of
Tim Tyler."

The 'offending comments' that originally appeared on the Strong Signals
web site,
were removed prior to this matter ever being brought to this forum or
any other.
Your 'buddy?' Rich Wells hasn't even have the decency to respond to
repeated private
messages which I have sent him, choosing instead to hide behind his web
page and
allow others to do his talking for him.

A real 'man' would contact me personally, instead of hiding out. In the
absence of
him stepping forward and contacting me personally, I indicated that I
would let
everyone know what type of a 'man' hides behind his web site and lets
others do his
talking for him. No threat, either implied or made. However, now I
have to wonder
what it is he has to hide.

And by the way... 'Spy Technologies' has absolutely nothing whatsoever
to do with
private investigation work. Never has... never will. It is merely
another business
which is 'owned' by 'Intercept Investigations', which in turn is owned
by me.

I apologize to everyone here for this garbage being brought here, but it was not I
that brought it. I only felt a need to respond to the ridiculous information posted
by a couple of people that are unknown to me, likely at the urging of another person
hiding behind their apron strings.

This entire matter greatly resembles another situation which recently erupted within
this forum, wherein an individual accused a PI of charging too much for his
services. The right of a person or business to charge whatever they want to is
absolute, and nobody has the right to degrade that person or business, only to buy
elsewhere.

Finally, I would like to publicly thank John Grogan for bringing this matter to my
attention earlier today. And now, I am out of here. Good-bye.

Hi,

I'm plannning to write one computer control software for ICOM 8500.
But I doubt that the command table in 8500 user manual is a complete
list.
Anyone can help me to find the complete list of command like ICOM
PCR-1000.
In such I maybe decode DTMF, CTCSS, auto record while sqelch is open
like PCR1000.
Please help me to find it!!!

Not to mention the fact that all of his "special" equipment is cell-blocked.
Why would any serious agency even look at his stuff? If he was an
authorized dealer, he could offer cellular capable equipment to authorized
buyers. I didn't see that type of notice anywhere.

> Your 'buddy?' Rich Wells hasn't even have the decency to respond to

Did you tell the doofus that Rich Wells has a public message posted on his
board indicating that he's away visiting his mother while she recuperates
from surgery? THAT message was up before the Gudin mess got started.

> A real 'man' would contact me personally, instead of hiding out. In the
> absence of

A real 'man' would not stoop to this trash talk, and might take the time to
read the website that has supposedly caused such trouble for his business.

> by a couple of people that are unknown to me, likely at the urging of
> another person
> hiding behind their apron strings.

Now who's committing libel?

That's a lie. Evidently he doesn't know much about business, either. Good thing he has lawyers to consult.

Frequency "coverage" is controlled by the main IC rather than a
Matrix of Diodes or similar as on some earlier sets.

The only way to restore the frequencies used by US Cellular and allow
keyboard entry was to replace the main IC (a 100 pin'ish surface mount
component) but this is no longer available I'm afraid.

Whilst full 800MHz could be restored the PRO-60 did/does not have
programmable increment steps and the default step through the 800MHz
frequencies was 12.5KHz.

I don't see why one would need to enter more than the first control channel found because all future control channels would be on system frequencies found by the first one. If you know what I,m trying to say :)

Chuck Rowe wrote in message <38cdc534.21267497@news.earthlink.net>...

Hi Steve,
Many of these freq. have been abandoned because of new digital cell technology. It is less expensive ad more secure for them to use digital cell than analog FM transceivers, or
trunking radios.

It sounds to me that the FCC is requiring Radio Shack to conform to their demands...so is it really a fault of Radio Shack's?

Some military bases and other federal facilities have started using UHF (406-420 MHz) trunking. They usually use 4-5 frequencies and are Motorola type II. They can easily be tracked with the Uniden BC245XLT. I'll look for the list of military bases that have gone to trunking and forward them to you.

Bill:

It MIGHT be a different matter if Radio Shack offered competent service on their scanners and radios. But they do not. In many cases, the returned items never see the inside of a service center. So in the event of a problem competent service is not available, and options are zero. Profit motive runs high, here, and though I'm a good capitalist, too, lack of options means lack of competition, and a lower quality of service, and performance is required to keep a customer's money. The long run shafting of people who own these radios include a termination of service support altogether when a new model comes out so the customer is SOL when her/his radio requires attention. We're not dealing with Drake here. We're dealing with a company whose contempt for the customer has become legendary in recent years.

The other issue is that it was NOT FCC's decision to terminate the availability of service information to the customer, it was Tandy's. The decision was made to restrict all information, rather than restrict just development of unauthorized mods, again, profit motive runs high.

A third, though somewhat touchier issue is the ability of an agency of the federal government to demand anything in the way of alteration of a legitimate company's methods of doing business. Watch this issue carefully, it has become a major technique of social and commercial architecture to harrass through the courts those who insist in standing up for the freedoms guaranteed in this country. Freedoms usurped by the Federal Government in direct violation of it's chartered purpose.

This debate will continue...and continue...and continue...and a result will be questionable at best...but one thing will be certain: those who chose to acquiesce will most certainly lose their rights. And in this hobby, acquiescence, such as your statement above, Bill, with such a clear and present danger to the hobby as exists now in the Capitol, is VERY dangerous thing.

6298. FRG-100 vs Drake R8 - Looking to Trade

Newsgroup: rec.radio.scanner

I am looking for a decent tabletop receiver. I am familiar with the Drake R8 but not the Yaesu FRG-100. I would greatly appreciate and comparisons by those who owned both of these. Is the PBT on the R8 an advantage over the FRG-100 for listening to hams? TIA.

By the way I am looking to trade a Sangean ATS-909 in VG cond. and a perfect UBC3000xlt with 30 kHz mod and full 800 MHz for a nice tabletop shortwave rx.

That's not always going to work. Although in most cases all
frequencies are used within the course of a 24 hour period, that's not
always the case. Now when the system switches to a data freq you
havent found or entered, you dead until it switches to a freq you DO
have entered.

Source record: 91790

There is another issue here. If I remember it right, Xerox and Kodak got in real federal trouble when they refused to provide service information and parts to third party maintenance companies. It's called restraint of trade.

There is nothing in the FCC Rules that prohibits a company from providing service manuals. Part 15 only requires that "scanning receivers" be made so that it is impossible to receive cell frequencies.

Those of us who have a real need to monitor those frequencies already have equipment that can receive all of 800 MHz, or can get it.

WIth $10,000 or so you can buy a receiver from w/j or CEI. It is not a "scanning receiver". Also, any service monitor can receive those frequencies.

So it's not the "evil FCC", blame a consumer marketplace that did not want to accept the reality that all radio transmissions can be monitored and demanded a political solution.

It is the same consumer marketplace that allows "baby monitors" that provide some really interesting listening...

International Crystal Mfg makes crystals for just about everything ever made. 800-725-1426. Also on the web at www.icmfg.com. Tell them the scanner model and mfr, frequency you want, and a credit card number and the crystal will show up in a couple of weeks.

Cocoa Beach is in Brevard county. We are on a edacs trunked system here.
Cape coms and KSC still can be conventially scanned as well as some others.

edacs system has 3 towers: north, central, and south. You should be able to
lock onto north and central from cb.

have a nice stay and don't forget to go to Ron Jons

I have owned both the FRG-100 and currently own an R8.

I have owned a lot of radios over the past 20 years, I consider the R8 the best and the FRG-100 second best. The Drake has better audio and versatility. It currently goes for about $500 while the FRG-100 is at about $350.

You don't get it. "Amateur" radio is already dead, it died a long
time ago. When the FCC came along and started to tell you what
"modes" and frequencies you could use, along with how
much power you can run...it really became something
that would never interest me.

I really couldn't care less about HAM radio.

Thanks Joe,

One of the freqs the base I work on used to use 413.000 mhz (exactly) and also
138.500 & 138.900
Now I don't even hear them on UHF (nor VHF)

Let me know if you find ANYTHING on that list.

Then you'd support Joe and Charlie running 50 KW on the ambulance
freq's when it's hauling you to the hospital? Or the FAA freq's when
you're onboard an airliner at 35,000 feet. Or the Fire / Police freq's
when you're having an emergency ? etc etc ...

I don't think you've applied much thought to this matter.

6335. BC200xlt manual

Newsgroup: rec.radio.scanner
Date: 2000-03-20 00:00:00 UTC
From: Kevin Fields <kfields@scf.usc.edu>
Message-ID: <38D5FA00.D33449B7@scf.usc.edu>
Source record: 91716

Does anyone know where I can get a copy of a bc200xlt manual? Thanks.

6336. Looking for scanner frequencies for Birmingham area, UK

Newsgroup: rec.radio.scanner
Date: 2000-03-20 00:00:00 UTC
From: Rick F <r.f@pmail.net>
Message-ID: <01bf9261$e90a1ba0$a514480a@pc-17077.bm.bbc.co.uk>
Source record: 91717

Hi.

I am currently seeking any frequency lists for the Birmingham area (UK),
especially Tipton, West Bromwich and Dudley, UK.

6337. What is 868mhz - Phone Conversations??

Newsgroup: rec.radio.scanner
Date: 2000-03-20 00:00:00 UTC
From: Zeke Setzer <zeke_setzer@hotmail.com>
Message-ID: <8b57fv$8l4$1@nnrp1.deja.com>
Source record: 91718

The scanner in my car is hitting some frequencies like 868.7875 and a couple others in the 860's which appear to be phone conversations, I think one sided, often more than one at once. But I've read that cordless 900mhz phones are 900-928 and old cordless are in the 40's, so what am I hearing?

I know that frequency is used by some trunking systems but this isn't a trunking scanner and these people are clearly just casually talking to each other, usually female - that's what got me paying attention because most of the police frequncies (sorry that's just the way it is here in Central PA) are male. It seems to disappear quickly as I drive by the source and it is heavy in residential areas.

Anybody know? Thanks!

There is extensive information on the Bearcat 895XLT and many other scanners
at the Communications Electronics (CEI) web site
at http://www.usascan.com.

Visit the web site, then click on "Bearcat Scanners". Click on the Bearcat
895XLT picture. You can then
view the entire Bearcat 895XLT owners manual. Additional information on new
Uniden Bearcat scanner
products may be found by clicking on "CEI News".

If you need further assistance, please call CEI at 1-800-USA-SCAN. To find
your a local Uniden
reseller call the dealer locator line at 1-800-297-1023.

Thank you for your interest in Uniden products.

Once again, is this true if you trickle charge? My personal experience
is longer life on NiMH cells, but that's a small sample, not precisely
controlled, etc.

Something as simple as a 4148 or 914 can still be found at Radio Shaft, package of 2 or 10 last I looked.. 10 to 20 cents each diode. RFparts while good for hard to find is a little pricey with the $25 min order!

>(I'm not saying it's not, I'm asking.)
As long as the charge rate stays below about C/50 it doesn't make a
lot of difference. The problem is at C/50 it takes a VERY long time to
reach full charge. If you want reasonable charge times, then you
really need to have a NiMh charger.
>
>
>|> NiMH cells come to us at a price: They will only last 1/2 to 2/3 the

>controlled, etc.
There are two distinct issues here. There is number of charge cycles,
and two things kill NiCd's, overcharging, and revese charging.
Overcharging ultimately boils off the electrolyte, and reverse
charging physically damages the cells. If you don't do either, NiCd
can last almost forever. NiMh aren't that tough, so the charger needs
to be more careful.

The second issue is self discharge, and this is an area where NiMh
really isn't so hot. NiCd's lose about 1% of stored capacity per day,
it's around 2- 3% for NiMh's, so a NiCd that's been in storage for a
month is still useful, and NiMh is close to dead...

>Uniden) or 10.85 (Uniden) MHz to output frequency. 4) wait about 3 seconds
>on that channel.
>Thanks To: Anonymous
>
>

That is so stupid, all you're doing is nothing since the phone channels are controlled by the data channel which is nowhere near the frequency that you're attempting to jam. Interferring with either channel on the cell phone will have the following effect, on the receive end it "might" cause some interference in the reception but being FM the capture effect will ignor the low power carrier since it's not phase locked to the handset transmit freq (this for analog only), remember the cell phone towers put out over 300-1000 watts to amke sure the little handsets get a good signal (check the FCC web site for the ERP on the cell towers and you'll be a bit surprised) and if you try this with the digital phones it'll ignor the interference unless you up the power to where the flourescent lights start to flicker....on the other hand you might be able to generate enough power on the handsets transmit freq (after all it's max power is half a watt) that would drown out the mobil

users transmission ....but the best way is to build a 1 watt transmitter for the data channel, blamk that and the phone dies now....as do all the others within about a 50 foot radius ....no data channel, no control, no talkie...lotsa walkie....

6367. PRO-92 tips

Newsgroup: rec.radio.scanner
Date: 2000-03-21 00:00:00 UTC
From: sascheffey@aol.com
Message-ID: <20000320193111.02117.00002939@ng-fz1.aol.com>
Source record: 91609

I just bought the PRO-92 and thought that I would share a few things that I have done to the scanner.
-The first thing I do to all of my scanners is cover the display with a piece of clear packing tape. I use an exacto knife to carefully trim off the excess. I have never had a display get scratched yet. There is some residue left behind which comes off easily with another piece of tape to "blot" off the sticky.

-The PRO-92 volume and squelch knobs have an indentation on the top which can't be seen. I use a liquid paper pen to color this in, this helps to see where the adjustment is. I have used model paint before on other scanners, and found that using a tooth pick instead of a brush is the best way to place the paint where you want it. I decided to use liquid paper this time to see how it lasts. I noticed that it is easier to remove this from the knob when I put too much on.

-Lastly, the PRO-92 uses 6 AA batteries, which is a total of 9 volts. Looking in the battery compartment it appeared that a 9 volt battery would work. Sure enough it did when I placed the 9 volt inside. I took a block of Styrofoam and cut it to fit inside the battery compartment. Once that was done, I cut out for the 9 volt battery. The block and the area for the battery need to be snug.

Since the Styrofoam can fall apart, I'm not using it. Just wanted to see if this would work. I am going to use the Styrofoam as a template for a plastic version. If this works without damaging the radio, I might offer to others. Still looking at the rechargeable 9 volt to see how that would work. Don't know if a 9 volt can be charged inside the radio.

6368. Pro-74 RS 800 MHz Race scanner Help and questions

I hear from the one who sold it to me that there are three resistors that are on the board. if you cut one it will let you listen to the block cell freqs.

Is this true?
Also can I remove the other two and open up more freqs?

Antenna question.... Is an Oscone atenna good for moutning outside and what is the best one for a truck? (handheld using while mobile)
What I want is not concentrate on certain freqs but to improve all of them.

Thanks!

Title 18 U.S.C. Part 1, Chapter 119, and burried deep in the mumbo-jumbo is
this little gotcha.....

(c) Conduct otherwise an offense under this subsection that consists of or
relates to the interception of a satellite transmission that is not encrypted
or scrambled and that is transmitted -
(i) to a broadcasting station for purposes of retransmission to
the general public; or
(ii) as an audio subcarrier intended for redistribution to
facilities open to the public, but not including data
transmissions or telephone calls, is not an offense under this subsection
unless the conduct is for the purposes of direct or indirect commercial
advantage or private financial gain.

I would imagine that if it's intended as a free service then you can listen to
it but you wouldn't be able to use it in your business and if it wasn't free
and you intercepted it then that would be stealing the
service......gofigure...

Attention to details...hmmmmmm.....from:

http://thomas-distributing.com/maha-aa-t.htm

"AA" 1400mAh Rechargeable NiMH (Nickel Metal Hydride) Button Top Battery Cell.
" New increased Capacity ! Now 1400 mAH..... Even better performance"
Now there is absolutely no reason to use NiCAD batteries any more. The NEW NEXCELL NiMH (Nickel Metal Hydride) batteries practically make them obsolete. You can use these new " AA " size NiMH batteries in all your Digital Cameras, Flash Units (Excellent Performance), Metal Detectors, Radio Equipment, Toys, Remote Controls, Remote Control Cars, Pagers, Flashlights, Etc...

"AA" format fits most electronic devices and are a direct replacement for Alkaline and NiCD batteries.
Latest technology - Ultra high 1400mAh capacity means super long run time!
Last up to twice as long as ordinary rechargeable batteries (1400mAh capacity)

Can be recharged 500 to 1000 times !
No memory effect, means you can recharge these new technology NiMH Batteries at any time.
No need to wait until they are completely discharged before recharging these new NiMH battery cells.

These new technology NiMH Batteries will also last 2 to 3 times as long as the old NiCAD rechargeable type batteries and 30% longer than older generation NiMH batteries

NEXCELL " AA " cells also have a large button on their positive post so they fit tight in all your equipment -- just like standard " AA " batteries -- and will hold their charge longer than most other NiMH batteries on the market today. Also these NiMH batteries have a nominal capacity of 1400 mAH but actually average about 1500mAH

and from:

http://thomas-distributing.com/nimh-batteries-nexcell-maha.htm

Latest 1.2V AA 1400mAh NiMH Rechargeable Battery Technology for Your Power Needs!
Ultra high 1400mAh capacity means super long run time!
Last up to twice as long as ordinary rechargeable batteries (1400mAh capacity)

Can be recharged for up to 1000 times!
"AA" format fits most electronic devices
Direct replacement for "AA" Alkaline and NiCd batteries.
Memory free operation means convenience.
Get more flashes and longer hours on your digital equipment.
Also available in AAA size, 650mAh 1.2V!
(Used in handheld computers, PDA's, HPC, etc)

and don't forget the new MAHA NiMH cells at 1550ma.....with essentially the same specifications as above.....for recharging, life and recharging requirements....

BUT the best buy on the site is the Kodak 4 pak with 3 hour recharger at $40....because all the others require you to buy the batteries and charger separate....the Kodak package is designed to work together....read the specs and make your own decision......

6371. ACS Newsletter for 3/13/00

Newsgroup: rec.radio.scanner
Date: 2000-03-21 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <8b6jog$87u$1@news.hawaii.edu>
Source record: 91613
Cross-posted to: rec.radio.scanner,alt.wildland.firefighting

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard!

.....

Please Welcome:

Francis R. Upton / W6FRU <w6fru@springmail.com>
Yucca Valley, CA
First, Thank you for a GREAT site.... I am a member of Morongo Basin Search and Rescue. I was with our LEICS unit until it was disbanded. I have been through your LEICS 40 hour Search course, it was very good for me. I have a interest. I hope that I can make a difference.

Laurence L. Larson <nikonshooter@eudoramail.com>
Los Angeles,CA.
I am a district level staff officer for the Los Angeles County Disaster Communications Service, and a Tech.PLUS amateur radio operator. After my upgrade on April 15, several associates of mine and I (all are DCS members) will begin developing 'traffic and parking garage friendly' mobile N.V.I.S. antennas...just as OES/ACS has been developing this capability, we belive that this type of propigation should be available to our served agency, as L.A. is a LARGE chunk of real estate. QUESTION...is it possible for me to 'sign on' with the ACS org. as an operator or associate to participate in the weekly 'NVIS NETS' that are

generated from Sacramento? Please advise. 73, KF6MOF
.....

What's New on the Net:

The new Florida Special Response Team-A (FL SRT-A) web page has
been redesigned and is now available on the www. Our web page
design company has made some major changes to the site,
streamlined it a lot and at the same time added a mission
resources section to it. The mission resources section
currently provides some useful tools for mission planning,
within the next few months we hope to add additional resources
for on line assistance. Our web site address is
http://www.flsrta.org Safe searching and a good weekend to all.
Best regards, Ed Wolff
.....

This week's EMCOMM Bulletin:

MC228 Are we Prepared?
To: Emergency Communications Units - Information Bulletin
To: Emergency Management Agencies via Internet and Radio
By: Auxiliary Communications Service (ACS) of the
California Governor's Office of Emergency Services

EMC228 Are We Prepared? For release 3/13/2000

If we have never experienced it, do we REALLY comprehend the
results of a _major_ disaster? Amateur Radio licensees and those
active in Emergency Response or Communications Units may have
their equipment prepared, but what about the family and the
family home?

We may think we have prepared, but it's a real shock when there is
no water, no electricity, no heat, no transportation and no way to
get them. Consider _JUST_ the loss of electricity. Do we realize
a. that public and private wells may not pump water?
b. that service stations have no means to deliver gasoline?
c. that grocery stores close because computer connected cash
registers and bar-code readers cannot function?
d. that refrigerators and freezers won't keep food
e. that traffic and street lights don't work?
f. that sewerage disposal system pumps may not function

Can we internalize the effect such events will have on us and our
family? Few can, so we ignore the travail, the trauma and
tragedy.

Yet, any moderate disaster can cause significant destruction,
injury and death, whether earthquake, hurricane, severe winter
storm or extended flooding. Partial or entire systems - roads,
water, electricity, gas - can be disrupted or destroyed. There
may be days, weeks, months or years without public services.

Disasters are not selective and occur anywhere, anytime - no matter how lulled to sleep we may be in communities that have not suffered such events.

We read about these events and watch them on TV, yet how do we interpret that to our own lives? More often that not we don't. It's just too much to think about contaminated water sources, or wells that won't work, about no electricity or no gasoline, no heating oil, gas or propane; of life being totally changed. We shrug it off and go about our daily lives, particularly if we live in an area that was NOT affected.

Yet, questions do arise. Some officials who were saying "prepare for at least 3 days" (i.e., loss of public services) are now saying "prepare for a month" One official recommended storing 200 small garbage bags for human waste disposal, intending they be put over 5 gallon buckets, then closed and disposed of by digging a hole in the ground. This is likely a reaction to massive disasters around the world causing the realization that nature is in control, not mankind; that massive events WILL leave some communities without services for extended periods.

So, let's sit down and review our situation. How will we heat the family in the dead cold of winter, or store food in the stifling heat of summer? How can we have water for a self sustaining family for, say, thirty (30) days? Maybe 50 gallon storage drums? (One source predicts a 55 gallon drum will supply a family of 4 for 2 weeks, just squeaking by.) Think solutions and implement.

Once we solve that, then let's help a friend or neighbor do likewise. Yes, it may never happen, but who knows, tomorrow the preparation that we do may help in ways we least expect!

- To subscribe to bulletins, use the Subscription Services web page at <http://acs.oes.ca.gov/subscribe.html>. If you don't have web access, just send an e-mail message to <mailto:emcomm-bulletin-sub@harthaven.com>.

- articles for these bulletins are actively solicited. They are for the benefit of all EMCOMM units, whatever the name. Please send suggestions, topics or submissions to cary.mangum@macnexus.org or cary_mangum@oes.ca.gov

Bulletins are on the ACS Web page: http://acs.oes.ca.gov -and a Landline BBS: 916-262-0856 (graphical & standard interface); and an Archive: ftp.ucsd.edu/emcomm and ftp.ucsd.edu/hamradio/races.

.....

Please let others in the emergency services field know of the newsletter, and encourage them to join... If you have opinions, suggestions or written material that you'd like to share with the group, let us know. We're always looking for new ideas and

suggestions that will benefit everyone.

See you next week!

Do you get your $36 back or do you get your life membership dues
refunded? Does canceling membership just mean that you are not
resubscribing to QST? What metric can be used to see if the radio relay
league is losing or gaining membership?

Is there any connection between membership numbers and the ARRL BOD
authorizing expenditures to hire a public relation firms to address
restructuring?

The February issue of Monitoring Times has a very good write up on Trunk Tracking Scanners. The article compares the Pro92 against the BC245xlt.

If you're planning on scanning a Trunked System, then I would avoid the Pro92! I ran the same comparision as decscribed in the Monitoring Times article (Pro92 vs BC245xlt) and found that the Pro92 was missing 30% of the transmission during the daytime hours on a busy Motorola System here in Santa Clara, CA. I would recommend the BC245xlt for Trunked Systems.

If you're planning on using it for conventional scanning, then you may want to consider buying a used one. The Pro92 is a little over priced for conventional use.

6383. RS PRO-2050 trunking problem

Newsgroup: rec.radio.scanner

From: medic13 <medic13@accesscable.net>
Message-ID: <hoEB4.36518$Jz3.387690@nnrp1.uunet.ca>
Source record: 91625

I have purchased a new RS PRO-2050 trunk tracker recently and I had no problems setting up the conventional frequencies. But when I went to try the trunk tracking procedures, it is confusing by the manual. Does anyone know in the simplest terms how I can get my trunk tracker to work. And some definitions for words/modes like: E1, E1P(1 to16), E2, Data, Fleet codes, Blocks,IDs. I have put in the frequencies in a trunking bank and when it comes time to hear the traffic I cannot. The frequencies are Motorola Type lli Hybrid , so what do I use E1,E1(1to16) or E2 ? Like I said, everything works fine up to hearing the conversations when I hit the "search" like the manual said,but I do not hear anything just the freqs. zooming through and never stopping on a freq. and nothing is heard. I have another scanner that works on conventional scanning only and I can hear all the radio traffic fine ,and with the trunk tracker I can hear fine in conventional .
If anyone help me right away I would appreciated. Email me directly at the following email: ems477@accesscable.net

Hello all,
Haven't posted in a while, just couldn't handle the Cheek/Mackey stuff.
Good to see it's gone! I've got a question maybe someone can help me with. Each night about 2:00 a.m. there's a very very rapid series of DTMF tones too quick to be someones autodial or to be punched in manually in the cell frequency range. this happens every night at roughly the same time and it is exactly the same pattern. If i can I'll record it in WAV format and upload it, but until then i was wondering if anyone has heard this. BTW I'm in the high desert Palmdale/Lancaster area. Thank you in advance for any responses.
Randy

"jsmith" <jsmith@aol.com> wrote:

> Which one would you buy or not buy and why or why not.

Well the "+3" wasn't around when I made my purchase...

...but I went with the 8500. The reasons are that it is
a good solid piece of equipment, well designed, and focuses
more on doing the basics right than adding fancy features.

The marks against the downside were classic AOR ergonomics
and suspicion on the quality of construction, another AOR
weakness.

HOWEVER... the AOR does have several things going for it.
It wins the "bang-for-the-buck" contest hands down, and has
far better filtering in it than the ICOM.

Would I still stick with the ICOM? yup. The quality of
construction and design are why.

Eric

Mike asked:
>
> What is the moral basis for Congress to force any person to set aside a
> specific portion of his earnings for retirement, whether it's Social
> Security or in a private account?

Because our society does not -generally- allow even foolish
old people to starve to death, those who do not save become
wards of the state in their old age, draining resources
and tax dollars from the workers who do save.
This is the moral basis for an enforced savings account.
Social Security is immorally administered and hideously corrupt,
but that's beside the point. The same logic covers things like
helmet and seat belt laws- people who refuse to wear helmets and/or
seat belts become medical welfare cases, wasting tax dollars
and increasing insurance premiums for those of us
who value our brains over our gonads.
I'm a Republican and a believer in smaller government,
but human nature must be accepted. These laws make sense.

Kind Regards,
D.S.

> I'm a Republican and a believer in smaller government,
> but human nature must be accepted. These laws make sense.

The key phrase: 'but human nature must be accepted."

Human nature is the one thing over which humans have control. We have choice, free will and the ability to decide to take responsibility for our own individual actions. That we generally do not, in this country, has been a function of the political wind. Which has in turn encouraged us to further abrogate responsibility.

The thinking that human nature makes laws mandating human behaviour necessary is contrary to the very concept of freedom. It presupposes that humans cannot accept responsibility for their action. It presupposes that the government MUST prescribe,and proscribe specific behaviours for the protection of individuals who cannot protect themselves. That thinking is flawed. The presumption is false. More insidiously, it presupposes that the bad feelings of tragedy can be avoided by restricting freedoms and choices, which is also false.

And tragically, by buying into the idea that any laws restricting freedoms are necessary, you support the thinking that's current in Washington that more laws will offer a better quality of life. And THAT's the big lie.

You have to make sure that you have programmed in, all the frequencies
for the system. The data frequency ha to come in quite strong for the
trunktracker to work. May be there is more then one set of frequencies
in use by the system. Some systems use mutliple sites & use differet
frequencies @ different sites.

Thank you for your thoughts, Peter, but I cannot agree with
your utopian assessment. We cannot base our actions on
what people *should* be, or *could* be, or *ought* to be.
We must deal with them as they *ARE.*

Many people _WILL NOT_ accept their personal responsibility
to the whole of society. These people cost the rest of us dearly.
Our culture shows no signs of changing back into one which
teaches and demands personal responsibility.
Unless and until society accepts means to weed these individuals
out of the stream, laws forcing compliance on all
are the only effective answer.

Perhaps I'm really a fascist without the racist overtones, Peter.
True freedom is impossible without personal responsibility,
and most people prefer to blame anyone and anything for
their lives, other then themselves. They mouth about
their freedoms, but in the end they actually want someone
else to tell them what to think and do.

Let us hope that, in the end, you are right and I am wrong.

Kind regards,
Dave S.

You're absolutely right, David. But if you read closely, you'll
see that you and I are closer in thinking than you realize.

> Many people _WILL NOT_ accept their personal responsibility

While you're right, that many people will not accept
responisibility,
that we simply abrogate the responsibility of the society to
protect
itself is not my point. Society has for the last two generations
entrenched in its citizenry that anything that was not
specifically
proscribed by law, was not only right, but virtually mandatory.
The
result is that laws have become necessary to enforce compliance
with
simple social courtesies, not to mention more significant
considerations.
The problem, ironically, is that in our efforts to become more
socially aware, and
sensitive to the needs of the individual, we abrogated our
responsibility
to teach, train, and encourage responsibility among our youth.
Once adults,

there is literally no way to get them to accept responsibility.
Not even
the pain of legal punishment. Even the law has no teeth to those
who do
not respect it. OJ Simpson but a single example.

Perhaps we've gone too far to recover. But we may, by being
less permissive and bringing back responsibility, eventually
obviate the need
for many of the intrusive laws that we now find ourselves saddled
with. Not that any laws are likely to be repealed. But laws or
not, we must return to personal responsibility if we are to move
forward as a civilization.

> Perhaps I'm really a fascist without the racist overtones, Peter.

Agreed. But without effective leadership in this area, we are
seriously hobbled .

I'm not sure what, specifically you're asking. SCA, is
Subsidsidiary Communications Authority. Its the authorization of
piggybacking a signal on a pre existing broadcast signal. Muzak does
this. So did the Physician's Radio Network. It provides broadcast
distribution for programming that is subscriber based, or too
limited in appeal to support a full broadcast facility.
FM BC, is FM Broadcast. Any FM radio.

The subcarrier is what the vehicle by which the SCA programming
is piggybacked on the FM broadcast signal, usually 67 or 92 khz.

In article <38D7BE42.AA8973A6@ix.netcom.com>, David Stinson
wrote:

> These people cost the rest of us dearly.

Actually, in most cases they don't. Smokers use less of the
health care system because they live shorter lives. In fact,
it's a total myth that smoking costs society anything. Hell, if
it weren't for smokers and the taxes they pay government would
probably come to a halt. (Well, not, but you get the idea.)

For every motorcyclist who costs "society" millions as a
vegetable from a crash without a helmet there are probably 10
cyclists who died from the crash without a helmet and cost very
little.

You have to look at the total effect and apply some risk
analysis. What happens if the person lives to age 75? What
happens if he dies early? Few people these days take the trouble
to look at the big picture. They look at Forest X and assume
that because 1/2 the trees are dying, that 1/2 of all trees are
dying.

Sounds like amateur radio policy to me, Peter. If God knows exactly
what people will be freebanding on 10m next week, those guys have
no choice. If they chose to be good guys and not freeband, then God
would be wrong and we know God will not allow Himself to be wrong
so He forces those nasty freebanders to freeband against their will.
That's the problem with an omnipotent God. He doesn't have to be
omniscient if He's omnipotent. He just abuses his power so He will
never be wrong.

Would anyone be able to supply me with a diagram or better info on the
following mod? Steps 7 & 8 are vague. thank you for your help in this matter.
Subject: bc890xlt-800mhz full restore

1. remove all cabinet screws.
2. remove 4 face plate screws and 1 bracket screw at center of main board.
3. carefully depress the outside edges of faceplate shield and tilt down.
4. unplug j4 and j5 and ribbon connectors j501 j502 and j503.
5. remove faceplate and logic board.
6. position board so microprossor chip is on left and memory battery on right.
7. locate the 3 chip resistors at chips upper right..marked 104 and
carefully desolder.
8. install the chip resistor at the 2 empty pads closest to memory battery.
9. reassemble carefully in reverse order.

Hi

(APBNews.com)
Just wondering.....is anyone having the same problem with this site as I am?

Most of them don't want to connect....when they do, the quality is terrible,
and after aprox 30 seconds, it goes to Net Congestion, and thats it....it hangs
there forever!

There are so many cities there I want to check out, but none seem to work.
Their "old" site was much better, no problems at all..

Any feed back would be appreciated.

Thanks

Oper911

Has anyone in the group succeeded (or even attempted) connecting the PCR-1000 to a Macintosh via the serial port? I've downloaded software for the Mac to Icom (MacPCR) but am unsure of how to make the hardware connection. Standard serial cable? Modified cable?

If this seems a ridiculous connection to make, what about using Softwindows run the PC control software? This still begs the hardware connection question of course.

Yes I do have a PC but unfortunately can't remove my wife from it long enough to enjoy the Icom.

Thanks for any assistance.

I am selling my GRE Superconverter II which is made for a handheld scanner and goes between the antenna and the scanner to allow scanning of the 810-912MHZ (cell freq.'s) on scanners that do not allow that band to be dialed in. It does this by reducing the incoming signal by -400MHZ so when you tune your scanner to 450MHZ you're actually listening to 850MHZ. I only have this one and they are hard to buy anywhere else. If you're interested please go to www.ebay.com to read the description and you can bid on it there. Go to Search and then search by item number. The item # is 290125388. Thanks. I just posted it today and it will be up for bid for 10 days.

6430. Leased 2 way radio's

Newsgroup: rec.radio.scanner
Date: 2000-03-22 00:00:00 UTC
From: Mike Gormley <WA8VEC@ARRL.net>
Message-ID: <38D91214.D70CB084@ARRL.net>
Source record: 91550

How do I find the frequency (s) or band of 2-way radios which are leased to other users? Does the FCC limit them to certain bands so I can use my search function to find them?

I am in an RV park in Kissimmee, FL, trying to monitor their communications channel. They have informed me they don't know their freq. because they lease the radios.

6436. VR-500 Problem

Newsgroup: rec.radio.scanner
Date: 2000-03-22 00:00:00 UTC
From: bah@gowebway.com
Message-ID: <8bbc27$od4$1@nnrp1.deja.com>
Source record: 91556

Can any other owner of a Yaesu VR-500 answer this question for me: when I am parked on any number of different frequencies, including my local police channels in the 494 MHz range, I hear a constant stream of pops and intermittent noise between actual communications. I do not get this on my other scanners. Is this because the VR-500 is so sensitive that it is picking up a lot of noise? Or is because it is getting a lot of intermod? Any ideas? Do I need to just crank the squelch up higher? Thanks.

I took a listen to this and to my unprofessional ear it sounds just like some spots on the low frequency radio spectrum. Nobody has moved near you with some noisy radio equipment have they? Could you be getting an unusual atmospheric skip?

It won't. It is the most complete site for modson the net, but like all
scanner sites is lacking many mods. The mods you need are in Bill Cheek's
books. They are available many places including ebay auctions. Not available
on net as far as I know. If anyone knows of any, please let me know too.

You can chop on the little parts all you want, still it will never get cell.
A very few OLD - 7 year and older scanners can be modified like that--you
better do more research and stay out of the pawn shops! Here is the list of
modifiable scanners:

Here is a list of the pre-ban scanners of which I am

aware that should be capable of frequency restoration:

PRO-2004 BC-855XLT *3 Regency 4030

PRO-2005 BC-200XLT Regency 1600

PRO-2006 BC-205XLT Icom IC-R10 *7

PRO-2022 BC-760XLT *4

PRO-2026 *8 BC-700A *3

PRO-2027 BC-890XLT *4

PRO-2030 BC-950XLT

PRO-2032 BC-2500XLT *3

PRO-34

PRO-37

PRO-39

PRO-43 *1

PRO-46 *2 *5

PRO-51 *6

PRO-23 *6

Note 1: Date code of 2A4 (Feb94) and prior, any xA3, any xA2 (label in
battery

compartment), or no "A" in the serial no. (Date code 3A4 (Mar94) and after WILL
NOT WORK !)

Note 2: Date code of 2A4 (Feb94) and prior, any xA3, any xA2 (label on back).

Note 3: Date of mfg code must not end in the letters "ID" or after. (ID=94), except for OAID (Jan94). (On BC700A some "OBID" (Feb94) work)

Note 4: Date of mfg code must not end in the letters "ID" or after. (ID=94)

Note 5: Units with date code of 5A4 (May94) can tune the restored frequencies
in 30 kHz Steps using a keyboard entry sequence after a wire on the "newly attached" daughter board is snipped.

Note 6: Units with date code of 6A4 (Jun94) and prior (and some 7A4) can tune
the restored frequencies in 30 kHz Steps using a keyboard entry sequence. After
date code 7A4 (Jul94) no mod can be done.

Note 7: The current 1998 models are. New reports say Icom is now only importing non-modifiable versions.

Note 8: Model (catalog) number with "B" at the end not modifiable. (Reported no
L201 jumper on the circuit board)

The below list are those scanners that were capable of receiving the full 800
MHz band,

without modification:

J.I.L. SX-400 AOR-950 Icom R-7100 *

Regency MX-4000 AOR-1000 Icom R-1*

Regency MX-5000 AOR-1500 Icom R-100

Kenwood RZ-1 AOR-2500 Icom R-9000

Uniden BC-800XLT AOR-3000 * Icom R-7000

Yaesu FRG-9600 AOR-8000 *

* pre-1994

Yeah there is still lots of radio, like whenever cops are chasing someone and no time to use the computer, plus when trying to set up meetings with other officers, asking quick questions, on stakeouts when one guy is in the bushes and talking on his radio, and lots of new calls like How do I get the computer to log on, and Please go out to car #xxx and log me out cause I am with Joe now and can't log on..., etc.

This isn't the CHEAPEST way, but there are lasting benefits:

Drop by Radio Shack and pick up their Cat.#: 22-306, Pocket-Size LCD Frequency Counter, currently on sale for $59.99. (Product specifics available here: http://www.radioshack.com/ProductCatalog/ProductDetail/Index/1,2098,CTLG_1_2200306,00.html)

Then have them key their radio and the frequency will be right there on the display. Really a neat thing to have around.

Rick

Hi Al,

I was replying to a jerk and TV antennas was a reference to him buying a vertically mounted TV antenna that is sold as a scanner antenna for much more than any TV antenna of that size is worth yet is criticizing me. Actually it is bordering on stalking considering he follows me around and tosses trash at me yet has never added to the topic. In my kill file he goes. On topic......

Your philosophy is right on the Mark Al. The original poster wanted to know if TV amps might help his Mil-air reception. I was just related my experience when I was too poor to spend much and wanted to hear some milsat stuff. I had a 2004 and a Channel Master antenna and 50 of RG6 coax. As it was I could just barely hear one of the milsat beacons warbling. Scanned for weeks and never caught a conversation. Added a RS #15-1117 10DB in-line amp and the beacon was up 4 s-units and I began to hear conversations that were gone without the amp. Not crisp clear pin drop mediocre quality, some noise, but 100% copy. No intermod surprisingly, OTOH I never used it for day to day scanning. It was good enough for me and my budget at the time.

Glenn.

Unfortunately not -- You'll need a programming cable, radio interface
box and radio service software. You're better off taking it into a
Motorola repair shop and have it retuned for $20-$30.

I'm afraid I haven't tried this and can't speak for certain, but with
most Macintosh situations, using a Mac modem cable will do the trick.
The Mac serial port is in all ways similar to a PC serial port except
for two reversed pins. A Mac cable is the same as any other except it's
wired with that reversal in mind. I use a "PC" external modem with a
Mac cable -- the modem (and in your case, the PCR-1000) is the same,
it's just the cable you need to change. Like I said, I don't know for
sure, but it ought to be that simple if you already have Mac software
available.

I've been having this problem with my PRO-2022 for a while, and it lately seems to be getting worse. When I first turn on the scanner the backlight lights up but no numbers appear. I have to turn the scanner off and then back on again, sometimes several times, before the LCD display activates and any scanning occurs.

Has anyone else had a problem like this?

Hi,

I was wondering if someone could help me out:

I've got a Uniden Bearcat60 XLT radio scanner
and i'm using a 9V AC adaptor, which i had from an old modem.
It seems to work fine, but in the manual it says i need to use a 12V
Adaptor.
Will this difference in voltage damage my scanner in any way or affect its
performance?

Thanks,

Marcus.

Source record: 91692

I have the PRO 94 and am happy with the 1000 channels split into two areas of 500 which are further broken down into 10 banks of 50 channels. The A/B switch determines which 500 frequencies you can scan. In the "A" side I have all the frequencies entered in like a regular scanner, however I have the "B" side programmed with all the trunking frequencies so it's like having two 500 channel scanners built into one. You cannot scan A and B at the same time, you must choose one... I think I am right on that but could be wrong.
A few of my friends bought the PRO 92 and wish they had the capability of the extra channels because it's like buying a very big house, if you have the room you will fill it even if you can't imagine it right now. Hope this helps.....

Greetings all,

I am having a flash back of naustalgia !
A long time back I had a Bearcat scanner that was crystal controlled
and had a chrome frame around the front, the case was dark grey I think.
It was rather large and had 8 or 10 red led's across front and switches to
select/skip channels, the speaker was also in the front.
Any one know the model numbers to these oldies but goodies.
I thing there was one with a wood enclosure also.
Hey, you may evan have one you want to part with !

Thanks for reading and happy scanning !
birt

Message-ID: <38D9A24E.728B3405@accesscom.com>
Source record: 91495

Mike; In order to be "leagal" the entity leasing the radios should have a license for the radio's. That however is mor the exception than the rule. Look in the local phone book yellow pages under "Radio" and see if any of the ads have "rental" mentioned in them. Look up these in the FCC database. The radio Station class code should have the numeral 6 after the the code listing. An example for the SF bay area is a license that I did. The callsign is WPOZ679

Good hunting

Ed

Subject: [ACS-NEWSLETTER] ACS Newsletter 3/20/2000

Welcome to the Auxiliary Communications Service Newsletter,
developed by the ACS Training Unit of the State of California
Governor's Office of Emergency Services. Please visit our ACS
Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in
emergency communications closer together by sharing common
ideas, and by introducing new technology into the emergency
services community. All individuals with an interest in
emergency communications, disaster preparedness or helping the
community at large are encouraged to participate here in an open
forum.

You will find a virtual community here, with representatives
from many different organizations with the same common goal:
emergency response. We encourage everyone, from whatever
organization you represent (or just yourself!) to bring us your
ideas, suggestions, concerns, manuals, handbooks, or opinions so
that we may share them with the group. To those of you who have
just joined us, welcome aboard!

.....

From the Mailbag:

From: Don Kulha, Sonoma County CA ACS, Russian River Response Area
Subject: EMC228 Are We Prepared?

The bulletin #EMC228 raised some excellent questions, some that I have
been considering and preparing for. I'd like to share some of the
solutions we've implemented here.

1. Water availability: Water is our top necessity. Although we have a
good developed spring these are known to have failed during earthquakes.
We store 100 gallons of potable water in thick plastic 50 gallon drums
as a fallback position. Additionally both at home and as part of our
response gear I have "British Berkefeld" gravity water filtration units.
These will filter out practically all bacteria, viruses, guardia, and
organic chemicals using a combined carbon block/ceramic filtering media
and our units (SS2, SS4) are capable of filtering 12 and 24 gallons of
water a day. Katadyn, Pur, and First Need are other commonly available
brands of proven effective water filtration equipment.

2. Fuel Availability: I keep some treated gasoline stored on-site. This has been preserved with either Stabil or Pri-G brand fuel stabilizing additives. Additives may not be necessary if fuel is rotated (used/replaced) every 6 months. I keep a Holley high volume 12 volt electric fuel pump outfitted with 10 feet intake/output hoses and 25 foot electrical leads with a fused cigarette lighter plug on the end. These are stored in a 5 gallon plastic bucket ready to pump fuel to or from our storage containers. Antistatic precautions must be observed for safety's sake.

3. Food: We have anticipated that in a major disaster food and commonly needed items may not be readily available OR be may be needed for the less prepared/fortunate. I store at least a 3 month supply of food and supplies such as vitamins, toilet paper, paper towels, batteries, coffee (and filters!), propane and medical supplies. The foods chosen do not require refridgeration are primarily common canned goods and include things like stews, meats, soups, chili, tuna, vegtables, pasta, fruits and asceptic packaged milk and juices. Additionally "comfort foods" for the kids such as puddings, cakes, candy, cocoa and powdered beverage mixes were deemed important. All these items were selected to be "shelf-stable" for a minimum of 1 year. Information on the storage life of foods is available as a FAQ at:
http://www.providenceco-op.com/fsfaq/fsfaq1-035.htm

4. Refridgeration/Power: I've developed a "minimum energy consumption useage profile" for times that power might not be readily available. This involved determining the power consumption of common articles and what power we could produce on-site under worse case situations. The minimal power senario (>.5kW/day) includes running several low power DC fluorescent lights, running AM, CB and Ham radios, scanners, nicad battery chargers, an RV water pump, a small TV for several hours, my coffee grinder and a fan. Power produced is stored in deep cycle batteries (2 golf-cart batteries in series is a good start) and used directly as 12 volts or inverted to 117vac. Our batteries (2x Trojan L-16's, 12v@350ah) are sized for 4 days of energy storage without battery state of charge dropping below 50%. Power for the batteries can come from several sources: utility, generator, jumper cables to a vehicle, solar or wind. The average refridgerator uses too much power so we store foods that don't require refridgeration...and we'll eat what's in the fridge pronto! Information on power consumption analysis is available in the file LOADCALC.PDF in the downloads section at
http://www.homepower.com

5. Toilets: Where water is deemed in short supply or too valuble to use flushing toilets or the municipal sewage treatment plant is not useable "sawdust toilets" provide a good alternative. Using a sawdust toilet invovles releiving oneself in a plastic bucket with an attached toilet seat. The bucket has a layer of sawdust, peat moss or other organic matter on the bottom and after use the new "deposit" is covered with the same material and bucket lid reinstalled (we put several slits in the lid edge to ease removal/replacement). When full, the bucket can be sealed/stored, dumped into a pit and buried or covered with more organic

material. The layer of covering material eliminates insects, odors and soaks up any excess liquid. This is a hygenic approach originally designed for composting toilets but works well in an emergency (better than having to dig up and empty dozens of plastic bags later). This approach is presented and analyzed in "The Humanure Handbook", ISBN: 096442584X, $15 at Amazon.com

These steps address filing a family's most basic needs. It not likely to replicate a family's normal consumption patterns for energy/food/fuels but will maintain a reasonable comfort level for them for quite some time and keep them healthy. We also store addition quantities of foods, first aid and sanitation supplies to aid in neighborhood/community response efforts if needed. Think and plan out your approach to these issues now and practice using your preparations so that if they're needed you and your family will be "acclimated" to them. This will help you identify problems in your approachs and forgotten items as well as making sure everyone knows how to use them if/when the time comes. Regards, Don
.....

This week's EMCOMM Bulletin:

EMC229 Training Test Matrix
To: Emergency Communications Units - Information Bulletin
To: Emergency Management Agencies via Internet and Radio
By: Auxiliary Communications Service (ACS) of the
California Governor's Office of Emergency Services

EMC229 Training Test Matrix For release 3/20/2000

This is a training endeavor that can be used to show how the unit can assist a local agency.

In numerous areas - due to the success of cellular, internet, telephone and agency trunking systems - it has become difficult for Amateur Radio licensees to show local officials just how their services can be beneficial. This is especially true where there has not been a local emergency of a serious nature for a decade or longer; or new systems have replaced the Amateur Licensee in the minds of local officials.

A TEST MATRIX is the printout of an area test of point-to-point radio communications. It is conducted, tabulated, and then presented to appropriate authorities.

The purpose is to determine and show the effectiveness of radio communication on certain frequencies (Amateur, Government or Agency) from specific points or locations in the area.

For example, Orange County RACES did a test for 12 physical sites in their area to determine how well the various locations within the County could communicate with the Emergency Operations Center (EOC) on Amateur Radio frequencies. They used it to show their

local Fire Authority how Amateur Radio could communicate from the locations to the Incident Commander during brush fires.

The Orange County test results consisted of a columnar report of 13 columns across the top and a list of frequencies down the left hand column, Below that was other data relative to the specific location such as a parallel comparison of Cellular Service, name of who did the test, area and telephone numbers for a person at the site from which each test was conducted. They used Park locations, listing the Park Ranger by name and phone number and any pay phone at the tested site. Results were listed as good, marginal, not usable, not tested.

In thinking about what they did, it seems that the idea could be used by other units for several purposes. Fortunately the Orange County Fire Authority had recognized the use of Amateur Radio as an alternate means of communications during emergencies and had used RACES during past events.

However, in other areas of the country where such acceptance has not occurred, it may be necessary to include media coverage (of the actual field testing) to gain exposure and get officials interested. This is tricky, but if done in a quiet, effective way with skillful news coverage (newspaper, TV, public radio, etc.) it can work. Media coverage must be carefully done so as to put subtle and seemingly indirect pressure on public officials to recognize and use alternative communications. However, if done incorrectly it can have the harsh result of turning them off.

Consider the needs of YOUR area.
- Flood reports and control?
- Road reports (evacuation of an ADJACENT area; hurricane?)
- Large parades and public events - public control, anti riot?
- Special needs in your area?
- Storms (tornadoes?)

If you've done that test, was a published written summary report handed to appropriate agency officials? If not, do a Test Matrix and present it. The approach to use is this: seek NOT to convince local authorities of YOUR need to use your unit, but show how it can assist them in a real-world way, preferably ongoing rather than as a doomsday response.

To subscribe to bulletins, use the Subscription Services web page at <http://acs.oes.ca.gov/subscribe.html>. If you don't have web access, just send an e-mail message to <mailto:emcomm-bulletin-sub@harthaven.com>.

- Ideas, suggestions and submissions for these bulletins are actively solicited and welcomed. Please contact cary.mangum@macnexus.org or cary_mangum@oes.ca.gov

Bulletins are on the ACS Web page: http://acs.oes.ca.gov -and a

It depends on what type of EF Johnson system they went to. If it's a EF Johnson Multinet System, then there are no scanners that can currently track it. If it's an EF Johnson LTR system, then the Pro92 and Optocom are the only currenlty scanners that can track it. Also, the soon to be release BC780xlt will be able to track an EF Johnson system, however, I don't know if it will have the ablility to track an a Multinet system.

Information about the Pro92 can be viewed at:

http://www.pro-92.com/

Information about the Optpcom can be viewed at:

http://www.optoelectronics.com/optocom.htm

Information about the new BC780xlt can be viewed at:

http://www.qsl.net/kf6kdd/news/bc780xlt.html

Please note that if you're planning on also scanning a Trunked Motorola System, then I would avoid using the Pro92! I ran the same comparision decscribed in the February issue of Monitoring Times (Pro92 vs BC245xlt) and found that the Pro92 was missing 30% of the transmission during the daytime hours on a busy Motorola System here in Santa Clara, CA.

6502. INFO: Wireless headphones

Newsgroup: rec.radio.scanner

I have shopped all over the place to find a good wireless 900 mhz headphone set.

Radio Shack has a decent one called the Optimus and goes for $130. Problem is that they don't last very long and I returned 3 of them and gave up.

The RCA looks and IS junk.

Sennheiser has 2 sets one is $220 and the other is $130. Both are WORSE then the Optimus and RCA and are usually sold by GoodGuys. They won't even stay on your head as the band is not springy. JUNK!

Cambridge Sound Works sell the Advent brand and they are REALLY NICE. Very well built and use 3 AAA nicads that they supply which go under a cover on the outside of the left earpiece. Very easy to access unlike the others. Nicely padded and the control knobs and switches aren't loose and sloppy but have a nice feel to them. They look very professional and only cost $100 whic is a bargain when you think of what the junky ones cost.

I use them on my HF rig instead of being tied down with a cord. I can get up and leave the room without missing out on the QSO going on. They work just as well as the $100 phones with a cord, maybe even better as they were intended for fine listening.

You have to get a stereo to mono adaptor plug to get the full benefit from the as they are set up for stereo and you need to have both sides listen to your mono ham radio. No bid deal. At least Radio Shack s good for that stuff!

OK, confirmed, I am hearing images of cells. How do I know? Yesterday I heard "the celluar customer you are calling is out of range". So now, legally, I guess I have to stop listening to it :) Although that's too bad because that was one of the local police trunk frequencies (868.7875). Hear it on 866.4375 also by the way.

Wasn't particularly close to cell towers when I hear these, hear them most of the way home from work at 5pm. Must be a scanner bug. Not terribly good listening mobile, but stationary you could hear at least one side of a conversation. Lots of digital hooey buzzes going on in the background.

Thanks everyone for their help!

Zeke Setzer <zeke_setzer@my-deja.com> writes:
>OK, confirmed, I am hearing images of cells. How do I know? Yesterday
>I heard "the celluar customer you are calling is out of range".

That just means that the phone call you were hearing was attempting
to call a cellular customer, not that the side you heard was cellular.

>So now,
>legally, I guess I have to stop listening to it :) Although that's too
>bad because that was one of the local police trunk frequencies
>(868.7875). Hear it on 866.4375 also by the way.

In fact, the tower frequencies for analog cellular start at 869.04 MHz,
and go up to 893.97. If you're hearing one of those as an image,
your scanner has an awfully low IF frequency. The mobile (handheld)
frequencies are 45 MHz lower in frequency, so it is plausible to receive
them as an image if your scanner had about a 22 MHz IF - still unusually
low.

Another possibility: apparently the airphones that are used on planes
are allocated frequencies adjacent to the land cellular system. Maybe
you have been hearing airphone transmissions?

Glenn,
I know that it is frustrating to try to help someone out by sending direct email, and then find
that the person has a bogus address.
My philosophy is to get the best gain antenna that you can only for the bands that you want. Follow that up with a
low loss transmission line. Amplifiers should be used as a last resort, given today's sensitivity of receivers.
I'm confused by your post. Apparently, the person in question is using a tv antenna, which is typically
a directional antenna, and cut for the tv bands. An amplifier used here will amplify noise as well as
undesired signals, which can lead to intermodulation distortion big time.
Al

6527. looking for a radio shack scanner?

Newsgroup: rec.radio.scanner
Date: 2000-03-23 00:00:00 UTC
From: dana <dana@randomc.com>
Message-ID: <Pine.GSO.4.10.10003222044280.4075-100000@cluster2>
Source record: 91586

I am looking for a radio shack scanner that was made back in and around 1993. I remember that it had 80 channels, and had 8 banks of 10 memory. It might have been made in 1994, somewhere along in that time period. what is that model? I know one thing, it sure had a hot reciever. What was that model?
I am blind, and could work it pretty well. If someone can answer this question, or has one for sale, please e-mail me back. I sold mine for $125, and i am still looking for the person I sold it to.
she was here in griffin, ga somewhere.

Hi,

I need the money for a new toy,so some of the old ones have to go,all work perfect,and are described honestly.I just don't wanna screw with Ebay..

1.Icom R7100 UNBLOCKED,looks new,great shape.Have box,copy of manual,cord etc.Asking $1000 firm,but will negotiate.You won't find a nicer one anywhere.
2.Standard C510A dual band 200 ch handheld,very good shape except stock antenna is tweaked a little.It works fine,and has the optional case.I have the box and manual.I have way too many handhelds,like 12,and it's gotta go.$165.

3.Universal M7000 communications terminal,great shape,has last updated ROM chip,have manual,help cards,etc.No box,I can't find it.Asking $550.
4.Green composite METAL CASED 12" monitor for the 7000,sold especially for it at Universal.Quiet,RFI wise.Great shape,asking $75...
5.Small oscilliscope for Rtty tuning,very good condition,have cables to plug right into the M7000.Asking $75
If you want all three,$650 bucks,if you ever wanted to get into Rtty/Fax,etc,you can't go wrong with this set up.

6.Panasonic RF2200 portable SW/AM/FM radio,very nice shape,has litle crackle in volume control(goes away if used a few hours,hard to get spray in there),and slight corrosion on antenna,one dial light died right after I inherited it from a family friend.Have manual,and copy of service manual.FM is awesome,better than any other radio I've used over the years,if it were only stereo,and had line outs!!
These usually go for about $200 on ebay,asking $175.I just don't use it enough to keep it..

Email me if you are interested,leave a phone number or I'll mail you back... Thanks,
Barry

6537. Freqs in Columbus, MS?

6538. FS: Wide-Band VHF/UHF Discone Antennas $29.95

Newsgroup: rec.radio.scanner
Date: 2000-03-24 00:00:00 UTC
From: AntennaWareHouse <kingpop@cis.net>
Message-ID: <38DB8DFF.B2073E74@cis.net>
Source record: 91447

Hello,

I have Stainless Steel element Discone antennas up on a eBay Dutch auction for $29.95. These are not only great wide-band receive antennas, but are good for Transmitting in the Amateur 144, 220, 440, 900, and 1290 MHz. bands with a SWR of 1.5 to 1 or less.

The Auction ends 3/26 9:05 pm cst.

They're at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=288216365

This is a Dutch auction, which means no worries about being outbid at the last moment, or the price sky rocketing because of bidding wars. You bid, you get one!

Be sure to check our other auctions and website for other great deals on Scanner, CB, and Amateur antennas.

Thank you

AntennaWareHouse

That is couragous. Unfortunately, the ARRL BOD doesn't care what we do. I think they would gladly kiss 500 good hams goodbye if it meant they could sign up 1000 CBer's. There were alot of good hams that threw in the towel and lost faith with the league when the ARRL presented their restructuring proposal. The ARRL used to be a good organization with solid beliefs, they even showed concern for issues that were on the minds of non league members. I don't know what caused them to change, maybe it is just that they're to close to Washington D.C. and the liberal limp wristed Clinton Administration or Rep. Barney Franks home district and eight years of liberalism has rubbed off. One guy said he was going to cancel his ARRL life membership but I don't know if he ever did.

Hello everyone!

I have bought a Sony Wavehawk 300 channel scanner (which can interface
with my PC)
The problem is that I cannot get my PC to recognize the Com port that I
have it on. I have a CD ROM disk that I use to Install and setup but no
matter what I do...i won't set it up.I even try to manually to install
and no use.
I am at my wits's ends

HELP!

p.s. Sony Wavehawk model number ICF- SC1PC

[One or more binary attachments are retained only in the source text.]

If your PC won't recognize the com port, it dosen't matter what you are trying to install. I would suggest obtaining support for whatever OS you are using. Try the comp.*.* newsgroups, there's groups for Win '95, Win '98, NT, 2000, OS2, DOS, Novell DOS, etc...

Good Luck,
Barry

Steven,

I'd be glad to help out, but let's take this off line. Please reply directly to my email address and include the following info:

Operating system name and version (Windows 95, 98, NT, 2000, Linux, BSD, etc.)
- If Win95 or Win98, include the output of the "ver" command from a command prompt
- If Linux, please provide kernel version (get this with uname -a)
- If NT, please provide Service Pack level

Which serial port? (com1, com2, etc.)

Is the serial port addressable via the operating system?

Is the serial port seen by the machine's bios?

This will help!

>>>>
Re: Pro-2022 Mods

Scan speed on the pro-2022 scanner can be increased dramatically by changing the clock speed resonator crystal from 2 Mhz to a
speed of 4 Mhz and higher. On some units I have gone as high as 6.4 Mhz, but I have found some units will not handle speeds above this range.

Simply replace X1 which is a ceramic resonator located near the processor with an available crystal above, but not over 6.4 Mhz. Remember that increasing clock speed will also reduce delay time if the delay function is used on a channel.

It would appear Beep delete can be accomplished by removing any one of three resistors in the output line of pin 9 of the mpu GRE0620A. These include R196(1k), R158(1k), or R133(100k).
Other options include switchable beep by the addition of a switch in line with this output.

Other generic mods include s-meter, tape aux. outputs, etc.
Bill Cheeks "Scanner Modification Book 1" has other mods for additional channels if 200 isn't enough!

Good luck and Enjoy!

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store

and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004, but Robert Cummings has modified an LCD from a Miller Engineering (http://www.microstru.com) experimenter's kit and fitted it to his PRO-2004. See http://dune.globe-net.net/~rc123/Robert/Backlight.html for details.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

One thing that didn't get answered here, though, that I am VERY curious about. Why is it that sometimes you only hear 1/2 of the conversation and other times you get both sides? I am talking about when you are in the Tower Xmit frequency range. Do some tower head-ends actually re-xmit the signal that they get from the mobile unit right back to the mobile unit? That is the only explanation I can conjure up. Sometimes you can only hear the side of the conversation that is going to the mobile unit, and you hear absolutely nothing from the mobil. Other times you can hear the mobile unit just as well as you can the tower.

Or is there some type of feedback path in certain landline phones that cause the audio coming from the mobile unit to go back to the mobile unit on the Tower xmit freq? This has been bugging me for a while, so any help you can offer is greatly appreciated.

Five years ago I left a 200 at my brother's place in Boston. I was just up there and he insisted I take it with me -- his wife didn't want it around and Charles didn't use it anyway. The battery was in need of reconditioning, but... all the memories were still valid!

I heard a lot of good stuff, with a 9 volt adapter plugged in, including a fire dispatch to my own apartment building. It's back in California with me now, scanning away alongside my personal "best buy" a $15.00 used BC100.

6570. FS AOR 8200

Newsgroup: rec.radio.scanner
Date: 2000-03-24 00:00:00 UTC
From: Steve Painter <stevepaint@clearwater.net>
Message-ID: <3nAC4.3347$Og6.724833@tw12.nn.bcandid.com>
Source record: 91529

The spec's are as follows:

100kHz - 2.04GHz receive (NO GAPS)
1000 channels
20 scan banks
40 search banks
FM, SFM, WFM, AM, NAM, WAM, USB, LSB & CW modes
Alpha-tag scan banks, search banks & memory channels
14 segment S-meter
Band scope
Automatic Power Off
Sleep timer
Display and keypad backlight.
Price.....$600 including shipping.

This unit is a no gap US Govt. model, serial # 050022 bought from a dealer in the US with the US bandplan as standard. Again, there are NO Gaps in the coverage what so ever. This unit is in pristine condition, no scratches, dents, etc. Has never been dropped, and whenever it leaves the house it leaves in the (included) AOR case. This price includes the radio, antenna, metal belt clip, wrist lanyard, box, manual, plug in AM bar antenna, A/C adapter/charger, cig lighter adapter, and the 4 original ni-cad's (used only a few times as I've been running high capacity rechargeables in it.

The unit has been hardly used at all, and am selling it to be able to purchase a ham HT and get back into the hobby. This has been a great radio and I'll be sorry to see it go, but it's much, much more radio than I need.

I'm selling it for a friend, and can include photos if desired. You must be satisfied or else your money is cheerfully refunded.
Steve

Maybe the Feds should pass a law barring electronics stores from employing empty headed store clerks. Considering the Shacks never ending quest to grab it's ankles, the retail chain would be forced out of business in order to comply with the mandate.

>Central PA...

Ah, but the antennas on the planes are 6 or 7 miles above the surface.
That gives them a range of 100 miles or so, which means the ground
stations are spaced quite far apart. If you happen to be located
near one of the ground stations, you'll be able to hear one side
of calls going to planes over a very large area. And the ground
stations will be positioned to hear planes at altitude, not on
the ground, so they don't need to be near any major airport.

6583. RadioRaft, multimode decoder software, new

Newsgroup: rec.radio.scanner
Date: 2000-03-24 00:00:00 UTC
From: Fran&#65533;ois Guillet <francois.guillet@free.fr>
Message-ID: <8bfttg$l7$1@wanadoo.fr>
Source record: 91542

Hi All

The new version 3.20 of the multimode decoder software "RadioRaft" is now
available.
It decodes automatically 30 modes of radio transmission as ARQ, FEC, Packet,
Pactor-I, Pocsag, Acars, Gmdss...
DGPS is among the new ones.
The continuous printing is now possible. The new version has also many other
improvements.
For more details, go to the RadioRaft official site at:
http://pro.wanadoo.fr/radioraft/
or mirror site: http://radioraft.free.fr/

To update your previous version 3.00 is free by Internet.
The not yet registered users may download the free version including now CW
Morse, FEC-A, ARQ-E, RTTY Baudot and DIGIT, a powerfull tool for radio data
analysis. The free version is not limited in time.

Good decoding

73s Francois Guillet F6FLT

The City of Santa Clara is on a Trunked System.

http://home.att.net/~wwhitby/ca.htm

The ATC frequencies for San Jose Airport are avaiable at:

http://www.airnav.com/airport/SJC

Confirmed Airline Ramp frequencies at San Jose Airport:

129.2000 American Airlines

129.5000 United Airlines

131.7000 Southwest Airlines

460.5500 PL 127.3 American Airlines

460.7250 465.7250 PL 186.2 United Airlines

460.7500 465.7500 PL 162.2 UNKNOWN Airline / Ramp Frequency

460.8250 465.8250 PL 114.8 Alaska Airlines

463.7125 468.7125 DCS 132 Southwest Airlines

464.4875 PL 77.0 San Jose Jet Center

464.9125 PL 156.7 American Airlines

Confirmed Hotels in Santa Clara:

464.0000 469.0000 DCS 631 Unknown Hotel near Great America

464.3750 469.3750 DCS 662 Doubletree

464.5250 469.5250 DCS 331 Doubletree

464.6750 Marriott

464.7250 469.7250 Embassy Suites

The most common frequency for the Resident Inn should be 154.600

I still have one... doesn't receive that well though. Guess that it is just old age. Also have the DC inverter, although it hasn't seen use in over 10 years. Did have the foresight in the mid-80's to make photocopies of the frequency codes and store them in plastic sheets.

I have one and I would say it is a reasonable performer on MW & SW. I typically use about a 21 inch telescoping antenna as I walk about the neighborhood. On MW this set up will pick up the local AM stations OK .. but not as good as probably any plain 'ol AM/FM radio. This set up picks up the medium to stronger SW stations quite well.

I longer whip improves things up to a point where overloading and more intermod offsets the gains.

I have a Sony 2010 and 7600G and the Alinco is no match for either, especially of MW AM. SW sensitivity is at least in the same order of magnitude, but over all either Sony is much better. BUT, neither Sony will fit in my shirt pocket while tuning from DC to daylight!

>> Thanks,
Frankly none of the scanners make for very good
MW or SW receivers. There is one problem with all of them, and a
second more serious problem with most.
1). They have no front end selectivity at all. poor Image rejection
is a fact of life with all of them.
2). With the notable exception of the AR8200 and MVT-9000, they have
very wide IF, typically 12-16Khz. (The AR8200 and MVT-9000 both
support narrow AM, which provides a much better choice for AM
broadcasts in the MW/SW bands.

Given that channel spacing on MW is 9-10Khz, and on SW it is 5Khz,
it's a good things most of them have poor performance in the MW/SW
range (actually they have pretty good sensitivity, but the standard
antenna is a very poor choice for MW/SW frequencies, and usually is a
gross impedance mismatch). There is a mod, and aftermarket kits to
provide the AR8000 with reasonable selectivity (use the SSB filter on
AM). Obviously attempting to get clear reception on one channel when
the IF pass band covers 3 is a problem.

There happen to be the two areas where dedicated SW/MW receivers like
the Sony 7600G do quite well, so they typically outperform the DC to
light handhelds by a wide margin.

Midian sells a small inversion style scrambler/descrambler. In fact they
manufacture several different types. One of which is adjustable with a
multi-turn potentiometer. It works flawlessly.

Source record: 91411

Hello, folks. I'm looking for any information on a JIL SX-100 scanner. I picked one up at a Hamfest today.

The embarassing part is that I can't figure out how to program the darn thing. The direct-entry and "SEEK" modes seem to work just fine, so I know it recieves OK. But no combination of holding, pressing, or releasing buttons that I've found seems to change the scan memories. Knowing how to set the time and date functions would also be nice. Can anyone give me a clue?

-Bryan

What valuable information????

I seemed to have missed it.

You don't mean "And for the do-it-yourself, antenna makers, strip off the wire of that old cb antenna, windup your own" do you?

Or were you speaking about "I go to Home Depot for my coax, connectors"???

IMHO, poor pictures, broken English and "As for amplifiers, I don't use them, not for me!" doesn't strike me as great information for newbies.

I am looking to buy a second handheld scanner and I have been contemplating the purchase of a Relm HS 200. The unit seems to be feature-packed, but I would really like to hear from those of you that have actually used one. Need to know the usual ups and downs (intermod problems, receive, audio, etc...).

Much appreciated,

Chris M.

KL,

Here are some sites for THP and others in Tennessee and Nashville.
Happy scanning.

Monte B. Carroll
Nashville, Tennessee, USA

http://members.aol.com/Airfoils/ScannerNashville.html - Nashville area

http://www.webdeals.net/sevco.htm - Mostly East Tennessee but many
links at the bottom of the page.

http://members.tripod.com/~cmeadows/Nashville_Scanner1.htm - Mostly
Nashville, but some THP, nationwide and miscellaneos freqs.

http://www.fordyce.org/scanning/ - This one is a grandaddy - Long
Island Scanning Resources. Tons of links to sites sorted by state.

Chris,

The RELM is a great scanner, very sensitive, but very intermod prone if you do not use PL tones. It was the first hand held with PL and DPL tones. I had a few of them, until the Uniden SC 200 came out.

For the money , I prefer the SC200, PL, DPL plus many more features then the RELM for about the same price range. Some say it is a bit deafer then the RELM, but it is triple conversion

This is for any scanner collectors.
Regency ACT-R20/6 20 channle crystal receiver
Radio has 20 Red LED's & 20 switchs across the front.
Radio is in good shape & works well.
Have instruction manual & service manual for radio.
Covers 30 to 50Mhz & 148 to 174Mhz & 450 to 512Mhz
You can retune the radio to cover a little way outside the
band range Would work on 6m, 2m, & 70cm with the right
crystals. Have use this radio to monitor the output of some 2m
Repeaters.
Asking $30 + shipping in the USA or best offer.

contact me at <hrudy@lgcy.com> or call 801-532-8511

The BC860XLT was a good value in its day.
Instead of the BC860XLT, consider the new BC278CLT, available for
about $180 from Best Buy and other discount stores.

The BC278CLT employs up conversion so doesn't have the image problems
of the older BC860XLT. The new BC278CLT covers the 800 MHz band and
AM and FM broadcast bands, too.

The new display is larger and easier to read. The BC278CLT does have
search and has a weather alert feature -- lots of radio for the money.

I reviewed the BC278CLT in Nov. 1999 Monitoring Times magazine.

From: John Black <jmblack@compuserve.com>
Message-ID: <38DE5F08.D3A984CC@compuserve.com>
Source record: 91347

There's no decimal point button, nor an MS button on the SX100 as the other post would have you believe, so....

Select your freq (guess you figured out that ST is the decimal point). Press the MW key and then the memory channel you want to save it to. If you're successful, the freq will stay the same but the channel no. will show up to the left.
Scan A scans all channels. Scan B scans the ones you select (sort of a reverse lock out). I think you press SW, then whatever channels you want to receive, then Scan B. I haven't had too much luck with that, tho.

Time: Enter 0 for AM, 1 for PM, then HR,MIN all with leading zeros if necessary, then press HOUR.
Day: Enter MO,DAY all with leading zeros, then press DAY.

The SX100 is a good scanner. Watch out, though, or soon you'll be looking for an SX200 and then the seldom-seen SX400 with all its accessories!

Regards,

John Black

Please help!

I have come accross a Pro-43 scanner that functions very well except for one thing. The reception is poor. Comparing reception to my Pro-91 it cannot pick up anything but the very strongest signals which means in the scan mode it rarely finds a signal and stops.

Does anyone know what might cause this problem and if its worth repairing? The date code is 1A4 and I don't want to replace the board but would prefer a component level repair.

Thanks,

Wade

Well said. I have one too. It is a piece of crap (probably beacuse it is made in the U.S rather than overseas). The radio reeks of intermod. On a more positive note, I have the Relm HS-200 which is a quality receiver.

>Any advise on monitoring railroad communciations? Which scanner is best
>in the 160mhz band? any recommendations on obtaining California up to
>date frequencies? Thanks in advance...

I'd say the most important feature for a scanner for railroad monitoring is how many channels you need. I bought my scanner specifically for listening to the railroads and bought a 100 channel model. For just listening to the railroads this is enough as there are fewer than 100 AAR frequencies. In addition to the 160 MHz band you'll want to be able to receive in the 450MHz range as this is were FRED (Flashing Rear End Device or EOTD - End of Train Device) operates. This is an automatic device on the rear of trains that reports on the brake pressure via an encoded radio transmission. It fairly short range so if you hear it you know a train is near.

The best source of railroad frequency information in California is the Altamont Press timetable. The latest one is supposed to be just out. In addition to frequency information it lists mileposts, detector locations, siding lengths and a whole slew of other information.

If your planning on using it in the car an external antenna is a good idea. I have a handheld and I use one of those devices that slip into the cassette tape player and plugs into the scanner to play the scanner sound through the tape player. This overcomes the relatively weak audio on my scanner.

At home I have a roof mounted discone antenna. This really helps as I can pick up both sides of the BNSF railroad conversations about 50 miles away. With the rubber duckie I can only occasionally hear the dispatcher.

As far as I know, you don't have to re-program the
cell phone for it to operate 911 calls. 911 calls are
the only calls that will go through without activating
a service.

Hy Bill

however if your next doors has either Satellite or cable and their television is next to your wall and you put your TV next to their wall as long as it is a Tv that picks up DX in the case of cable you should be able to recieve their picture from the stray RF signal.

it works I did it.

bye for now

margret (Teta) ;-)

I've owned both receivers and for me, what it came down to was the AOR was a good receiver with scanner-like abilities and the Icom a good all around receiver, esp. if you want to listen to SW, but a so-so scanner. Both were a pain in the ass to work with, having to listen to the click/clack relays. Also, software for both really suck. That is based on an expectation that a $1400-$1800 radio should have all of the capabilities available to the typical $300 scanner with a PC interface. The software that AOR and Icom offer for these scanners is a joke and the third-party software is mediocre at best.

Both are really over-priced if all you want to do is listen to the cops, fire, neighbors and cell phone users. Neither is much of a scanner, in the true sense of the word and neither compare to scanners selling for 1/4 the price.

If you want a good scanner, go with the BC9000 or PRO-2042/2006 with an Opto board. If you also want to listen to SW get a decent SW radio and in the end you'll pay a lot less than either the AOR or Icom.

I care! What is an obselete mode? What is an obselete test?
And what are obselete values! I don't have any grey hair.
Old is a relative term. However, I am in my 40's. I took my exams at an FCC office and still believe all exams should be given there. Ham radio took another step back when the VEC program was born. To many people get their license or upgrade because they have friends who are VE's. Ham radio took another step back when the no-code license was born. And now with the new license restructure, the hobby has move backwards even further. I don't have a VE badge to send back to ARRL but I can understand why people are doing it. I for one don't need a radio club from CT to speak on my behalf. They put out some nice books but , in my opinion, that is all they are good for.
Currently I have an Extra class license and I have it so I can work the lower 25 of the CW band.
I work ALL amateur radio frequencies from 160M to 23CM and use ALL modes, not much voice though.
Yes I do care the way our hobby is being flushed down the gutter buy the FCC giving in to people who don't want to work for their license and getting something for nothing!

This is not true. All cable leaks. They are required to keep the
leakage below a certain level only and have no control of customers
own wiring. If you live in a cable area, it is likely you can hear there
audio on a scanner. Try 143.75, 149.75, 155.75, 161.75,167.75 and
173.75.

Every place I have lived I have heard at least my own and neighbors cable.
It is someone too often for cable companies to get in trouble with the FCC
over excessive leakage (often in the VHF aircraft band).

Sometimes for fun in the car, I put the freqs in as I drive around to
see where leaks are bad.

Did you look at the solder joint at the antenna,a lot of these WERE NOT soldered at the factory!I've seen two like that,and a couple more that were pretty pitiful.Sometimes as they get older,the antenna connector starts to wiggle around,and the solder breaks,or the trace pops right off the top board.None of these are that big of a deal,the broken trace is fixable with some glue,and a litle tinkering.Usually,if I run into a deaf one,I just take a screwdriver and touch it to the antenna joint while listening to 162.55 or something keyed up all the time,and if it suddenly jumps up in sig strength,I know it's not really deaf.One time, the solder joint on the PC board was fine,but the one on the wire that comes from the BNC connector through the PC board wasn't soldered very well at all,and it finally popped off.
If the BNC wiggles on the one you have,the solder is probably broken, a 10 second fix,if you are lucky...Make sure you tighten the BNC up,or it will happen again real soon.

Barry

6645. What scanner to get now??

Well,now that I sold my Pro-34 last year, which handhelds are the ones to get this year, or later this year if there is one on the horizon I should wait for? I can only afford one real good top o' line trunk tracking unit this year. I hear the '245 is good but hear a lot of people nit-picking about that one on this NG, having all kinds of problems with it etc. etc. So, should I steer clear of that one or what? And what about the other great ones out there, If there are any. Much appreciated, Vic.

As other posters have replied, cable signals are not really 'broadcast' so would not be receivable on your scanner or any receiver not physically connected to the cable (or Direct TV® decoder).

However, if any local broadcast TV or radio stations retransmit theses feeds, you could easily pick them up on a wide coverage receiver (with WFM detector) on the center audio frequency for that (TV) station the usual 450-451/455-456mHz (+others) "news assigned frequencies", or an AM/FM radio if applicable.

Also, depending on your location, you could get the signal directly from the source, in Washington, D.C. Fox News Bureau© transmits control room comms on 464.5 and 464.55 mHz.

Or if you want to monitor at home, I guess you could make a gift of wireless headphones, speakers, or baby monitor to a nearby neighbor. :+)))

Hope this helps.

Are YOU willing to pay for the extra expense involved?

>program was born. To many people get their license or upgrade
>because they have friends who are VE's. Ham radio took another

That happened long before the VEC program was started.

>step back when the no-code license was born. And now with the
>new license restructure, the hobby has move backwards even

Times change. The hobby must change with them, or die.

>further. I don't have a VE badge to send back to ARRL but I

Understandable, since you lack even the courage to post with your name
or callsign.

>can understand why people are doing it. I for one don't need a
>radio club from CT to speak on my behalf. They put out some nice

Who's going to do it, then? I admit they do a lousy job, but they're
all we have. If folks like you would get involved and run for League
office, or at least vote, things would change.

>books but , in my opinion, that is all they are good for.
>Currently I have an Extra class license and I have it so I can
>work the lower 25 of the CW band.

In that case, the new rules will affect you NOT AT ALL. So what are you
whining about?

>I work ALL amateur radio frequencies from 160M to 23CM
>and use ALL modes, not much voice though.

So?

>Yes I do care the way our hobby is being flushed down the
>gutter buy the FCC giving in to people who don't want to

>work for their license and getting something for nothing!

Yawn.

The current (March 2000) edition of "Monitoring Times"© magazine

www.grove-ent.com

has, on pg. 82, an article by Larry Van Horn, lists the American
Association of Railroads® (AAR) channels 8 through 97), some shared
'Business Band' (IA) channels used in Canada only (ch. 2-7)
and some new "splinter channels" with 7.5kHz (VHF) and 6.25kHz (UHF)
spacing.

U.S. frequencies are in the 160.215mHz to 161.610mHz (VHF) and
452.900-452.96875mHz and 457.900-457.96875mHz (UHF) ranges, fixed and
mobile.

I hope this helps.

since the option was either a VEC type of program or no licensing/rare licensing...which do you think is better for the service?

for this part of the world, the VEC program means you can take the test locally instead of having to drive to tampa or miami in the middle of the week.

seems the enforcement guys and gals discover questionable exams on a regular basis. if you have proof of fraud or cheating, please do pass it on to them.

An article in Popular Communications a few years ago discussed these, and they are supposed to be scrambled comms.
Never heard any comms or static/scrambled signals when the Oilers existed in Houston, but the range to search was fairly large and the comms were very short. The range was reported to be somewhere in the 600-800 MHz range, so it limited the type of scanner used to search (AR8K) and the rf static in the dome was enormous.

A trunked radio system is one where a pool of frequencies are shared
among several services. When a user keys up his microphone, a
computer reacts by assigning that user's radio a frequency, and then
puts out a signal that tells others in the same "talkgroup" that
someone is transmitting. Each time the mic is keyed up the speaker
could be using a different frequency. The advantage is that since
nobody talks 100% of the time, more efficient use of assigned
frequencies is made. Multiple services with many users can share a
relatively small number of frequencies without stumbling over each
other since a computer system holds the frequencies in a pool,
allocating them as needed and taking them back when they're not in
use.

Contrast this with conventional radio communications. Each service
needs its own frequency, or possibly several frequencies. Someone
talks on a channel (or frequency) rather than on a talk-group. The
only way of differentiating between various services is that they use
different frequencies. But most of the time any given frequency may
go largely unused. This is inefficient.

The problem scanners face in following trunked conversations is that
one moment on a particular frequency you might be listening to the
police, and the next, mid-conversation, that same frequency might be
carrying the fire department. Meanwhile that police conversation you
were trying to follow has relocated to a different frequency.
Trunk-tracking scanners listen in on the "control channel" to
determine what frequency they need to tune to in order to provide a
coherent transmission. A trunking scanner can follow a talkgroup's
conversation as it migrates from one frequency to another.

As for blocked vs. unblocked, you're probably talking about cellular
frequencies. It is illegal in the USA to manufacture a scanner that
can receive, or easily be modified to receive cellular phone
conversations. This law was given some real teeth a few years ago.
The result is that if you want a scanner that will enable you to

violate the law by listening in on cellular conversations you will have to obtain a pretty old one, and then perform some modifications on it. New scanners (going back a couple years or so) cannot be modified to receive cellular. Some older ones can.

But the problem with old scanners is that they don't have very many memory banks, so it's hard to program any meaningful amount of frequencies into them. Certanly nowhere near enough to program in all 832 analog cellular frequencies into them.

Another problem with trying to scan cellular (aside from it being illegal, and difficult to do with old outdated modified scanners) is that more and more people are using digital cellulars that transmit with TDMA or CDMA rather than Amps. TDMA and CDMA are not scannable because they're a digital signal. Furthermore, many of these phones are also now able to operate in the 1.6Ghz range, which is beyond the range of most scanners.

So the long and the short of it is that from a legal standpoint you can't scan cellular, from a scanner standpoint any scanner that can be unblocked is old enough that it's not very advanced by today's standards, and from a cell-phone standpoint a good portion of the phones don't even transmit an analog signal that could be listened to anyway.

It's best to just stick to listening to the stuff that law-abiding scanner enthusiasts listen to; there is a lot out there to hear.

I purchased my daughter a scanner and have programmed in several frequencies from the Betty Bearcat book in the 154-155 range and do not receive anything. She was so excited when she got it but a little disappointed now. I would like freq for police, fire, rescue etc. Any help would be greatly appreciated.. Thanks

It sounds like an Electra Bearcat III or IV. The BC III has a black front, and the IV has a silver front . I've seen a couple at local yard sales, and they're frequently auctioned off on eBay. Just watch how much you pay and don't get carried away. I bought at BC III last year and it's been happy scanning away in my bedroom ever since.

Another thing to keep in mind: If you buy locally, at a garage sale or such, it's much more likely that the scanner will come with crystals for frequencies that are useful in your area. (Or, at least, used to be useful, things change over 20 years.) Crystals often aren't cheap.

-Bryan

From: Barrie Shepherd <barriesnsp@cwcom.net>
Message-ID: <8bkj5t$5gj$1@bugstomper.ihug.com.au>
Source record: 91430

Put simply, whether you hear 1 side or both of the conversation depends upon the termination that the call meets in the phone PSTN system. If its to an ordinary phone, or local you often hear both sides because of the side tone feature of the phones i.e. you are hearing the other side rebroadcast via the receivers phone / termination. ISDN and calls to digital phone system have far better rejection so the cross talk does not occur hence you only hear one side.

Basiclly NO. The Cable is a secure system in that it is supposed
to give off NO enternal Radiation outside the cable. TV FM sound
is also a Wide Band signal that most scanners don't handle it too
well. The direct TV signals are well above what the typical
scanner can handle also.

6681. Re: AOR AR5000 +3 or Icom IC-R8500

Newsgroup: rec.radio.scanner
Date: 2000-03-26 00:00:00 UTC
From: John Porter <oceans1@nccoast.net>
Message-ID: <mArD4.964$W8.34279@reader1.interactive.net>
Source record: 91442

I used both for awhile and also went with the Icom. It seemed much more solid and even though Icom is not known for ease of use, the 8500 was easier for me to operate. I agree with Eric, it has more basic features, but it does them all very well.

I think most people from recent posts about the differences between the two preferred the AOR, as it has more bells and whistles, but they don't justify the added cost IMHO, and I still think the 8500 is more of a solid 'workhorse' reciever. It is an excellent performer in all bands and is built like a tank.
Besides, my experiences with AOR products (the 8200 in particular) have taught me that they would rather build a reciever with mediocre performance and a lot of features, than one with excellent performance on fewer features - seems backwards to me.

I think it bears noting too that Icom has been very helpful in tech support and operational questions for the 8500, while AOR has consistently given me wrong answers and even ignored my questions or service problems all together, an experience shared by many of the 8200 owners I know.

John,

That is a very nice thing to do. Just contact your local battered woman`s shelter or police dept. Tell them what you want to do. They`ll take care of the rest. Many abused women are affraid to leave the shelter for fear of the "ex" beating them or worse. The phones people like you donate let them lead a more normal life.

Thank you for your concern,
Charlie

I just bought some "scratch & dent" scanners from Service Merchandise.

Can anyone tell me of a scanner store or distributor in the greater chicago
area that would have batteries/ac adaptors/battery chargers,etc. for:
Uniden SC150B
Uniden 148XLT

Thanks,
Orin

Very good radio for a dual conversion, very fast, 100 fps. But not good if you want to do much cell reception. The mod for the Pro-51's that are old enough--about 7-94 and before--are not like mods for other scanners, they don't allow you to do a limit search (which does a continuous search through your selected range of frequencies) in the cell band at all, all they do is let you get in there and do a direct search, if you allow it to get out of the cell frequency area, it reblocks that area and you have to punch buttons and get back in manually, then restart the direct search. You have to constantly watch it as you do a direct search and not get out of range--impossible to do while you drive, or if you are in the dark, etc. At the blazing speed of 100 fps, it can get out of range very fast. The price for a clean pro 51 should be about $100. People pay lots more than that sometimes because they don't realise the limitations--it is just not a pro 43 or 37.

6705. Help w/ Discriminator Output on BC350A.

Newsgroup: rec.radio.scanner
Date: 2000-03-27 00:00:00 UTC
From: Dan <danandbecky@ll.net>
Message-ID: <se0beelllul12@corp.supernews.com>
Source record: 91316

Hi. I'm finding that more and more scanner software out there requires discriminator outputs. I'm in the process of making a discriminator output jack on the back of my Uniden BC350A, but am having a few questions.

I found IC chip 3359DA, which a web site suggested is the appropriate chip. I've found pin 10, as instructed. My question is, now what?

Is PIN 10 the equivelent of the positive audio lead? If so, where's the negative lead?

I would like to wire the discriminator tap point output to a 1/8" jack on the back of my scanner, so that I can use a standard patch cord to plug my scanner right into my computer. But, I am running into problems trying to figure out what to do after the discriminator tap point has been located.

Any assistance would be appreciated. Thanks!

Dan

Im looking for a home scanner that is unblocked, prefer one with the most freq range, but will consider all. Will also consider a handheld.

Please contact me at MWKroah@yahoo.com.

6707. FS: CUSTOM FIT SMA-TO-BNC ADAPTERS

Newsgroup: rec.radio.scanner
Date: 2000-03-27 00:00:00 UTC
From: gulyas@netzero.net
Message-ID: <8bmdtvhbi1@nnrp1.deja.com>
Source record: 91377
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.swap,rec.radio.scanner

Do you have a need for an sma-to-bnc antenna adapter that is custom
made to fit and protect your H.T. or scanner radio?
Adapter allows you to:
Quickly change your antennas to base,mobile or different style use.
Use the more popular and wider selection available of bnc antennas.
Prevent chassis connector wear or from coming loose due to always
having to change antennas.
Adapter features:
Gold contact pins for best conductivity.
A low profile design with a rubber covering for a factory antenna look.
The rubber base seals to the top of the radio with no spacers needed
for moisture and dirt protection.
The base provides a positive antenna support for all applications.
No need to remove once installed to make any antenna changes.
$11.95 + $1.50 S+H (Sizes to fit most radio models)
For complete information and to view a photo of the adapter go to:
WWW.QRZ.COM (SWAP)(ENTER KEYWORD SMA TO SEARCH CLASSIFIEDS)
OR EMAIL: gulyas@netzero.net
I welcome any questions or comments at my email.
Thanks for looking at my posting.

Check my VA Beach page http://members.home.net/vanr1/vabeach.html. I did not know the switch had been completed but I have the old type I and some new Type II listed. If the list is not complete I should be updating it soon.

Hope this helps,

Van

> exams at an FCC office and still believe all exams should be
> given there. Ham radio took another step back when t>>

New people like the above are ruining the Service.
The amateur service took its first step back when land line telegraphs replaced signal flags. I took my exams during the Civil War, while under fire at Cold Harbor, and believe that no one born after 1899 should be allowed into my personal hobby. The service then took another step back when spark gap transmitters replaced landlines. The final indignity was when someone invented UHF. I still don't get it. Thank the gods I don't have to use voice much, since I'm not too good at personal interactions that don't invove a key.

PS, I got my call sign when there were only 15 letters in the alphabet.

I agree, virus have been posed in the past this way.
If anyone really wants to see the effect this program promises to do, go to:
http://www.exploratorium.edu/exhibits/depth_spinner

There are more effect at: http://www.exploratorium.edu/exhibits/
They are a complete "waste of time" but fun, and virus free. Requires
Shockwave.
No, I don't work for the Exploratorium, or have anything to do with the
original post.
I just thought I'd provide an alternative, safe way to see these optical
effects.
Oh yea, and I know it's "off topic". Sorry.

Eddie

BillM <radios@home.com> asked:
> Is it possible to monitor cable TV programs using a scanner?

As other posters have indicated, a cable system system should not
radiate (most don't), a direct connection to the cable would probably
overload your scanner, and TV audio is wide FM.
Having stipulated that ...

From the FAF - Frequently Asked Frequencies
on http://www.strongsignals.net/htm/oak_faf.htm

Television [73.603]

From: Fred Allen <fallen-idc@worldnet.att.net>
Message-ID: <ZROD4.41$AW1.2721@bgtnsc05-news.ops.worldnet.att.net>
Source record: 91394

I have a Icom R-7000 System up for bid. Includes the Icom R-7000 Receiver, (covers 25-999.999, & 1025-1999.999 Mhz, AM, FM, FMn, USB, LSB), RC-12 Wireless Remote Control, IC-EX310 Voice Sysnthesizer, DC Kit, TV R-7000 Receive Adapter, Service Manual and Instruction Manual. Also included is a Sony PVM-1380 Professional Color Monitor. The features of the monitor include: 13 inch screen, 2 video inputs, and 2 audio inputs.

The Icom R-7000 has one small scratch on left top of case, and also a EEB sticker on top of case, front is in excellent condition, and all boxes and manuals are included.

The monitor has a few scratches but works perfectly. All for $895.00 and I pay shipping.

Thanks,
Fred

I'm looking for about 50 feet of RG-223/U cable...this is almost the same size as RG-58, but is double-shielded and has a stiffer coating. What I have says it's made by "Delco Wire & Cable Inc." This cable makes nice jumpers for the bench, and aren't near as stiff as your typical teflon coax...I bought what I have here now at Dayton a few-plus years ago, and haven't seen anyone selling it at hamfests since. Can somebody steer me in the right direction? Thanks...

It's not an oversight....It is snooty HAMS doing what they do! Kinda makes me glad I'll miss it by a few weeks on moving back to Jersey.....3 weeks and counting!
They just want to yap with their "know it all" ham buddies on 2 meter WT's rather than have someone set up there with 11 meter although they may even understand that CB'rs are going to go there with plenty of cash to spend on their overpriced crap. How many used 75 dollar D-104's will be displayed this time around? You might want to save your time and money and go to Yonkers!

Dan,

You will want to use a 10mf, 10 to 20 volt non polarized (bi-polar) cap between the pin and your output jack or cable. You can get them at Radio Shack, 2 in a pack for about a buck. While you're there get a small female NON SHORTING jack to match your cable. The ground on the radio is one connection (shield on the cable to computer, etc) and the signal is the other (center connector on shielded cable). That's it.

Mike

Dead simple.. take your old one apart and replace the cells (As I recall I used
2X Panasonic (or whatever) 3.6V
600 mAh cordless phone packs (available anywhere). Lasts far longer than the
origional Bearcat batteries.

I just purchased a TrunkTracker scanner from Radio Shack and with it came a book of Trunk system freqs for all cities in the U.S. I live near Roanoke VA, where they have just recently gone to the Trunked system and all the frequencies I needed are in that book. I am enjoying this scanner immensely. Hope that helped.....I really don't know what to tell you, short of you need that book or some other type of reference for your city or town. later.

There's a planetary alignment on that day as well, and supposedly
architecture of the pyramids predicts the end of the world on 5/5/2000.
After some research though, I have found that this alignment could just
barely be considered an alignment, being that the planets it concerns are
only within 25 degrees of each other in the sky, which isn't much of an
alignment at all. And the pyramid architectural prophecy was based on
measurements of a main corridor in the great pyramid in feet, where
egyptians picked up the emperial system of measurement is beyond me.

And so begins another summer of Blue Angels/Thunderbirds/Snowbirds
requests! =)

These are the frequenceis I found them on in Sept '99 in Halifax, NS:

During practice:

345.9
170.9
164.9
238.15
275.35

I only heard them on 170.9 (maint), 238.15 (diamond) and 345.9 (solos)
during the show itself.

hobby (hï¿½bï¿½ï¿½) noun

An activity or interest pursued outside one's regular occupation and
engaged in primarily for pleasure.

Part 97 specifically says that ham radio cannot be used for commercial
purposes. Hence, it falls under the above definition of a hobby.

-----BEGIN PGP SIGNED MESSAGE-----

> > I was wondering why we have different modes, and what do they do?
> >
> > Thanks for your time,
> >
> > --David
> >

We have many different modes, each usually suited to different situations, with appropriate advantages, and disadvantages.

For example, CW (or sometimes refered to as Morse Code--which is not technically correct, as Morse Code is the way the data is sent, CW (Continous Wave), is the way the data is encoded--OK, maybe that didn;t make sense:). CW is when you simply key the Xmtr on and off. CW can be slow to transmit data unless computers, or very experienced operators are used. One of the biggest advantages to CW, is that it can get through, when no other modes can. Because of it's simplicity, it can work in the worst conditions. Also, it is very easy to build a CW transmitter, for instance, many computers now use "Oscillators in a box"--it is a metal container, very small, with 4 leads-- Positive voltage, Ground, and signal out--attach a switch to the power supply, and you have a CW transmitter.

AM is one of the next modes commonly used. Again, it is fairly easy to build a AM Xmtr. Some of the disadvantages, are: it uses more bandwidth tahn CW, RTTY, SSB, or others. It is also highly subsceptible to electrical impulses like lightning--stoms 100s of miles away can cause static crashes on an AM radio. Common uses of AM are: AM BCB (of course:), Aircraft., Shortwave BCB.

SSB is very commonly used in military and amatuer communications. It's advantages are: less bandwidth than FM or AM, 3x the power output for a similiar AM transmitter (For example, my 10m radio puts out 7w on AM, and 25 watts SSB).. Some of it's disadvantages are: reciever and transmitter complexity increases, it can be ahrd to get used to listening to at first, and usually needs to be tuned, via a BFO, or, as it sometimes called on a CB, a clarifier. SSB is used by hams for voice mode almost exclusively on HF (one exception is above 29.6 MHz on 10m for those with General Class or higher), for transmitting your TV picture signal (which is a form called vestigal SB).

FM is one of the most popular modes known to the general population. It has clarity, the capture effect (beyond the scope of this

diatribe, but it is a highly desireable quality in many situations).
FM takes up bandwidth--lots of it. common bandwidths for FM are
5kHz, 20kHz, and 200kHz. FMis used for most GMRS type
communications, FM BCB, the audio content of a TV signal (found 25kHz
(or is it 75kHz?)down from the upper channel limit). FM again,
increases the complexity of a rcvr or xmtr.

There are *many* other modes, and I'll list a few here to just as
examples:
RTTY, PSK31, FSK, AMTOR, PACTOR, Broadband (like TDMA and CDMA,
commonly used for sigital cell phones)--and many more.

I hope this was enough info to get you started :)

<god@pcpartner.net> wrote:

One point that may be of interest is that the military still uses AM mode
for aircraft and some other types of communications, specifically instead
of FM. The reason for this has traditionally been safety. When two FM
signals are rec'd at the same time on the same frequency, only the more
powerful signal can be heard. The second transmission is lost. On AM, both
signals can be heard, although not necessarily understood. This gives the
radio operator on the receiving side a better chance of hearing a
distress call which may otherwise go unheard on FM.

Are you sure it was aviation not a weather report. I get 3 or 4 weather thingys, always with the time, location (Like Sonoma County, winds to 34 knots, ceiling at 7,000 ft). Usually the pilots can tune in to the local weather for the area that they takeoff from. The control tower also gives them weather info for take off, ceiling, wind direction, etc.

So make a multi legged or fan dipole with three elements and it now runs
circles around your RS antenna for less than $18

BTW how many ham bands can I transmit on with your RS antenna? The over
priced discone is good for at least 3 bands.

Jason,

What you are hearing are meteorological broadcasts called Volmet. They
are found all over the world and broadcast to aircraft that are out of range
for normal VHF communications.

Check out http://www.ute-monitor.org/aerolist/ for a Aerolist.

Also spend some time digesting these.

Here's a scenario, A shooting occurs in your listening area. Cool! Let's tune in to the police which are trunked. Now EMS and Fire are responding too. EMS is conventional. So who do you want to listen too? The police on scene looking for the shooter, or EMS talking to the Hospital about the patient. Much easier to have a scanner that does both conventional and trunked scanning at the same time.

Hands down the 245 is by far the better radio. The difference in price is probably about $25-50 but worth every penny. Pro-91 has no multi-track, no EDACS and less storage. Get the 245. You'll be glad you did.

On Mon, 27 Mar 2000 19:01:01 -0500, Cotton66 <Cotton66@paonline.com> wrote:

>Besides the dual conventional/ trunked scanning capablilities of the 245 >, how much better of a radio is it than the 91???? The BC895XLT cannot be modified. So what is this modification stuff concern.
The only modifications for the 895XLT that I have found is a new power cord
and antenna, changing frequencies and turning it on and off.

Do you have any more bright ideas?

Yes. If you connect the scanner to the cable tv line you will find the answer to the question. You will find the frequencies that are probably interferring with your scanner.

Hello to you all,

Sorry to bother you again.
May i ask for some WINFLEX support in this group please ?

Within our country they start with new FLEX 1600 network this week.
Most of it iam able to read, but lots is garbling txt.
Must are high very long transmissions of ascci messages... and iam not
able to make any sens of it.

Interface is OK.
(2 and 4 levels)
PC software is OK.

I'am no allowed to post a logfile,
but it will help a lot if you see what i see overhere.
And maby give me some advice what this is....

I'm a pilot, usually I just call over the phone for weather conditions. Fax my flight plan. Your right about the control tower giving some weather stuff for take off, ceiling, wind direction, etc.

There are about 50 or so freqs for weather, my radio (aviation radios are much different then what you got.) tunes to them, by pushing the whv button, which is very easy, cause your just keep pushing to go on through the local ones. The closest is tuned first. Its hard to explain, till you actually do it.

Have you considered taking flying lessons?

if the scanner is up close or near by the frequency may be monitoried. Most of the new 900 phones are secure. I have tested several models. Panasonic's has some excellent 900 phones.

##Here's an anatomy of a typical A.T.I.S. (automated terminal
information service) broadcast.

"Chino Airport information ALPHA, 0253 zulu weather, wind two niner
zero at one five - visibility one zero - ceiling two thousand five
hunderd broken, one five thousand overcast - temperature zero-niner -
dewpoint one one - altimiter two niner niner six."

*Chino Airport = Airport name.
*Information ALPHA = Phonetic designator, changes hourly or as often
as ATIS is updated.
*0253 zulu = Time in UTC (GMT).
*Wind from a 290 degree heading at 15 knots.
*Horizontal Visibility 10 statute miles.
*Broken cloud layer at 2,500 ft above ground level, overcast at 15,000
above ground level.
*Temperature 9 degrees celcius.
*Dewpoint 11 degrees celcius.
*Altimiter (barometric pressure) 29.96 inches.

##Weather might be followed by airport notes such as...

"ILS runway two six right in use. Arriving and departing runway two
six right and runway two six left. Notice to airmen: the runway end
identifier lights for runway two one are out of service."

##The broadcast will conclude with...

"Advise controller on initial contact, you have received information
ALPHA."

I hope this helps get you started.

I can't help but notice that web site has the oft-reported but always
incorrect VHF frequency of 141.850 for the Snowbirds. They've been in
the Mil Air band for years (272.100 for the last few seasons). I wonder
what else is out of date...

The station you are recieving is for airliners crossing the Atlantic to get updated weather forecasts
after they have been flying 4 or 5 hours and the old forecast they have recieved are expired. I doubt that they really use it much anymore since they have better modern communications sat links cell phones but not sure. The airlines also use HF for posistion reporting to controllers while crossing the ocean . Usually
they give flt number location ,altitude and weather conditions. I heard an airliner reporting a Hijacking in progress to the controller in New York . Very interesting . Check the Short wave Web sights or Magizines for Freqencies on HF. Have fun.

I use an Alpha Delta 4 position switch with N connectors. This requires
a bit of investment in cables with "N" on one end and "BNC" on the
other, but it works well for me. I had a local outfit called the RF
Connection put the cables together for me.

This was never marketed as a ham antenna. It's a *scanner* antenna. The
discone, even though reasonably resonant on some bands, makes a poor ham
antenna. Broadband design = zero gain.

Tapping the discriminator gives you access to the audio from the
receiver BEFORE any type of filtering or compression takes place.
Simply put, you can then decode PL and DTMF tones, DPL, and other
types of additional audio normally filtered out of the sound from your
speaker. This is NORMALLY an easy project for someone with a steady
hand and some radio knowledge...

Oh, so what gain does the RS antenna exhibit??? You don't know.

Your blanket statement certainly shows something. A discone makes a great
Ham antenna in certain situations. You see at VHF/UHF many hams and scanner
users don't need gain. Many many times gain is over rated especially for
everyday listening of the uhf/vhf bands. Height and low loss coax is right
up there with gain for the casual listener IMHO.

Glenn

>Can't find it? Because it is not there. Hobby is 'your' definition
>but not the FCC's.

The question was a straw man. Not every detail about ham radio is
spelled out in Part 97. Since the Part 97 makes it OBVIOUS that ham
radio is an avocation (hobby) rather than a vocation, there is no reason
to spell it out. Anyone with a funtioning brain (yes, I know this
excludes many hams) can figure this out without for himself.

Considering you quoted only half the sentence one can only wonder if you have a limited attention span or just can't read. Here, I'll repost and help you out.
I said: "Both have and AOL account and spew false and or misleading information like a couple of Homers"

Now you were bright enough to realize millions have AOL accounts and even millions of them are clueless newbies but how many of the millions of AOL account spew false and or misleading information like a couple of Homers????
Now do you follow the logic DOH????

> Why don't you go back to your eternal feud with John Mackey and leave us alone?

Us??? Who are you teamed with there DOH? As for Mackey, you are just grasping for straws to float your sinking butt. You are whining because I don't agree with your antenna philosophy so rather than argue antennas you play duck and avoid. I expressed a number of ideas and opinions concerning the RS and discone antenna. All I get in return is half quotes and BS like this. HAHAHAHAHA! Hey AOL newly DOH, here's a tip for you. I won't go away but do your self a favor. Quit crying and use a filter. YOU and you pocket mouse DON'T have to RESPOND? Easy enough, DOH?

Actually that was what I wanted to know. I have a couple of these that I paid around $6 for. They are so so functionally but it is really cheaply built.

No for $40 it is a rip-off, my channel master runs circles around it. For eighteen maybe......

BTW, would you consider putting FA in your auction posts? In the past people have remark that it is deceptive and rude to post auctions without noting it in the header. Just MHO.

If you object to people questioning what you are selling maybe you need to do a bit of soul searching pal.

Do you always need somebody covering your back when making business transactions?

Cross-posted to: rec.radio.scanner,alt.radio.scanner

I'm not one to buy new radios very often. I currently have a Pro-2005 and a Pro-51, both of which were bought new. I'm interested in getting something a bit faster than the 2005, which has been modified to do 13 or 26 channels per second.

When I selected the 2005 I did so because of the reputed quality and exceptional frequency range of the rig. I'd like something of similar quality and coverage, plus trunking capability (and the faster speed!).

I'm not stuck on Realistic or any other brand, so feel free to suggest anything! Any pointers from the pros?

Do yourself a favor: even if you have no interest in ham radio, get yourself a
Technician-class amateur radio license. The Technician is the entry-class ham
license...no Morse code and only basic radio/electronics knowledge is required
to pass the test. Why? Because most states that have mobile scanner laws
exempt licensed hams from the restrictions.

I doubt you had the same antenna. This is the tri-band vertical model, with separate vertical elements for VHF-LO, VHF-HI, and UHF. As such, it will run circles around overpriced discones and "one size fits all" dipole designs.

Before you buy.

6845. Aviation terminology and frequency questions

Newsgroup: rec.radio.scanner
Date: 2000-03-29 00:00:00 UTC
From: Jason White <whiteja@rvib2.rvib.org.au>
Message-ID: <YFdE4.58521$3b6.230951@ozemail.com.au>
Source record: 91293

I have several unrelated questions to ask regarding aviation transmissions:

1. Recently, with my new wide-band receiver, I was able to listen to "New York Radio" giving aviation weather on 6604 khz at approximately 0800 UTC. As I live in Australia, this signal has clearly been received over a relatively long distance and I would be interested to know from which airport in New York it originated, and whether it is intended to be heard over such distances. Incidentally, Australia's own national aviation weather broadcast is on 6676 khz, single side band, with a transmission every half hour.

2. Is there a site on the web which discusses and explains the terminology used in aviation weather broadcasts? I have searched for relevant details, but with no success so far. The Australian and U.S. broadcasts seem to be slightly different in the terminology used, though most of it is the same.

3. Are there any listings available on the internet of international "utility station" frequencies, including those which can be received in Australia? So far, I have heard not only the aforementioned aviation broadcasts, but also the U.S. coast guard's marine weather for the Pacific, several Australian marine weather broadcasts, international aircraft communicating with centres in Australia, New Zealand and the U.S., etc. For the latter, try 8867 and 5643 khz, single side band; I neglected to take note of the U.S. cast guard frequencies, but they are around the 6-7 khz range, after approximately 0900 UTC. Of course, there is much more traffic on VHF and UHF frequencies, but this is local in origin and probably not worth mentioning here, as this is an international newsgroup and most readers probably aren't interested in Australian frequencies.

I would like to trade my Intel Pentium 200mmx Toshiba 470CDT for a Pro 2005 or 2006 with the OS456 board installed(also willing to do a trade on a stock 2005 or 2006). The laptop has a 2.1 gig hard drive, 32 meg of ram, 33.3 modem, 10x cd-rom,3.5" floppy and a 12" TFT screen and stereo sound. Battery holds a charge for about 1.5 hours. thanks

Your prediction is older than you are: In "...1922 many radio magazines which had catered to the transmitting amateur swung away from him, one even so far as to run an editorial ... prophesying the end of amateur radio." (From Fifty Years of ARRL.)

You don't really need a discrim tap for ACARS decoding; just make sure
that
the squelch is open all the way to feed the signal (yes, you will hear the
noise
in the background). Check the software selections under Rich Wells'
excellent
site, which is:

http://www.strongsignals.net

and select 'software' from the pull down list on the left.

I still challenge anyone to show concrete proof (other than: "I heard it
from a friend who heard it from a friend.") of a person being cited,
arrested, etc for using a scanner in their vehicle. I have a brother who
is a highly intelligent veteran of the New York City P.D. He can't
recall, nor he he personally seen, an instance when an honest citizen
had his/her scanner confiscated or received a citation.

You should immediatly make a 3 pointed hat out of aluminum foil and wear it everywhere. This will deflect the Omega rays from the black helicopters. The next thing is ALWAYS carry a small FM radio with you that is tuned to your local Public Broadcasting station. It doesn't matter if you are listening but if the radio is on, the local oscillator contains a sub-harmonic destabilizing sine wave which neutralizes all alpha and beta detection devices. The men that are following you that are wearing long trenchcoats and dark glasses (yes even at night) can no longer detect your presence inside buildings.

You can also take plastic baggies and fill them with Tide detergent (no other fabric product will work) and keep at least four in all of your pockets at all times. That way the Andromeda tracking unit cannot pick up the ground disturbance from your presence. Stuffing some of the small Snicker's bars in your shoes will enhance this protection.

There are safe-houses in secret locations but I can't tell you about them here or it wouldn't be a secret. However, certain episodes of the "X" files have them subliminaly encoded. I don't know which ones but the next time the Sci-Fi Channel has an "X" files Marathon, watch each episode to be sure to get it. Make sure you have your alumium hat on during this process.

Just saw info on this one at StrongSignals.net, and I'm waiting for this one! Anyone know how much it's likely to run? Maybe I'll shoot a note to Bob over at Grove and "pre-order"! <grin>

Finally, a rig worthy to hold the spot where my Pro-2005 now sits!

Just a thought, I didn't see anything about RS-232 on this, but it does mention "computer control". Anyone played with this feature on a "beta"? I'd like nothing more than to be able to script something up in Perl to control the rig, or to connect it to my Palm Pilot and control it via Telnet!

> for a clearer signal.
Since it's a new house, you might want to run some conduit (large pipe with no sharp bends) from your radio room to the attic or some other point near where you are going to run coax to the outside. That way you can pull more coax through there in the future if you want to add more antennas. Put some pull wires through the pipe when you install it also.
Also, you might want to think about how you are going to mount an outside antenna (or antennas). Are you going to some day want to put a mast/tower on the roof or side of the house. Talking to your architect or general contractor about putting some extra bracing in certain potential mounting points might be a good idea.

Someone else made a good point too - home run some cat5, coax and speaker wire (that means from each room to a central point, such as the basement). That way you can expand later on...or wire up a few speakers around the house connected back to your scanner.

Matt

Did he attempt to recover it? The NYS Attorney General issued an opinion
(which I think is like case law, but not sure...) that scanners were not
contraband and must be returned in the same condition. I saw that on a
website regarding scanner law.

Leather cases for Uniden scanners. Fit models BC235XLT, BC245XLT, SportCat, and Radio Shack Pro-90. These are made from heavy leather like police and fire department radio cases, not the thin glove leather. These have detachable swivel belt loops like the two way radio types. These are new, not used. I ordered a bunch for a show and have these left over. I have a total of 18 but E-Bay will not allow me to do a Dutch Auction! I can e-mail pictures at your request. Contact me at dat2comm@juno.com for more information.

Message-ID: <S7BE4.6142$oQ4.183024@sodalite.nbnet.nb.ca>
Source record: 91152

I have a handheld, 200 channel Radio Shack PRO-34 Scanner.
It covers the following frequencies:

30.0000 - 54.0000
108.0000 - 136.0000
136.0050 - 174.0000
380.0000 - 512.0000
806.0000 - 823.9375
851.1125 - 868.9375
896.1125 - 960.0000

It works well, with nothing wrong that I know of.
Please make an offer.

Regards,

Howard MacFadzen

I have played with the demo. I have heard lots of good things about it, but I am not a fan of software that puts the radio panel on your computer and then you use the mouse to push all the buttons. I can move my fingers a lot faster than I can click a mouse. I am starting to standardize on ScanStar, but it has a lot of problems in my opinion. I'll keep bugging Sam to make it worth the price I paid for it.

Send them!
My criteria is that it not be a transmitter, and that it covers some public safety band VHFlo/hi /UHF. Vintage stuff is great even when it is just knob tuning.

Digital spread actually uses more than one frequency at a time when transmitting (unlike frequency 'hopping'). Scanners can only monitor one frequency at a time, not more than one at the same time. It is an old technology that the military has used for years. It has recently become commercialized. I found that info on the internet.

The closest match these days would be the Optoelectronics OptoCom.
But you need a computer to make it all work. And it runs $500+

If you're willing to sacrifice freq coverage and wide FM receive, I'd
suggest the Uniden BC895XLT. Just make sure you only need Motorola
TrunkTracking in the 800 MHz range. Great value for around $200 these
days.

If you need TrunkTracking outside of 800 MHz, you should look at
the RadioShack PRO-2052 base or Uniden BC245XLT handheld.

Or wait for the upcoming Uniden BC780XLT in July.

Bu Brett, how do you get the radio to log all frequency or talk-group hits
for 24/7 when you're away from your radio? How do you get it to record
the audio to your hard drive to verify active frequencies or for
identification purposes? Or let's say you want to program a few hundred
frequencies in just a few seconds? Your fingers that fast? ;-)

I can certainly understand the emotional feelings and attitudes of the many hams who have DONE IT THE HARD WAY, whether this was CW at 13/20 wpm, or driving 150 miles to the FCC Field office to take exams, or whatever. ONE SIMPLE QUESTION. When will it get through your thick heads that this IS NOT THE ISSUE? A lot of hams did it this "hard way", and no one is criticizing them for having done it. But unless something had massively changed in the hobby, it was doomed to go down the tubes. I don't see how so many can be "blind" to this reality.

What responsible governmment (or businesses) is going to sit around when spectrum is at a premium, amateur radio is not growing, and the on-air behavior of the "old and wise ones" is embarassing to all. If you haven't studied a frequency chart recently, you ought to do so, and NOTICE how "generous" the allocations are for Amateur Radio. If you think these weren't vulnerable under the existing conditions, then you are grossly out of touch with reality.

For those that are upset with all the changes and restructuring, it appears to the rest of us that you would have been content with no changes for the last few years of your life, as the hobby dwindles, and then if it all folds after your "passing", then so what. That appears to be what the underlying attitude is, and if so, it is about as far removed from the "spirit" of Amateur Radio, as you can get.

Also, if you were of the opinion that the hobby was going to grow under the previous conditions, think again. The world has changed. Interests have changed. The Internet, in a way, is the more practical "ham radio" of today. Available, free-time is scarce, and the vast majority of established hams (20+ years or more in the hobby) are so grossly out of touch with young people today, that there is nothing they could do to bridge the gap, let alone generate new interest. I think many younger hams saw the same problems/options/opportunities that the ARRL/FCC saw, and that was we had to make changes, adjust to the times, or lose it. Plain and simple.

BOTTOM LINE. It doesn't make a hill of beans difference whether anyone likes or dislikes the restructuring. It's here, it's going to stay. Many believe it was a step that will help Amateur Radio survive/move forward for the time being. Other changes will probably follow. I am certain that all older, current, and future hams will be able to still enjoy what Amateur Radio offers. And, if you think you have to do something drastic to express your discontent, go ahead. It will have NO EFFECT on ANYONE, no one will care, no one will listen to you, and if you decide to depart from Amateur Radio (one way or the other),

probably no one will miss you. Why? Because you spend your whole time looking backward. LIFE, and Amateur Radio, are about LOOKING FORWARD.
73, Wayne, N6WIX

My HS 200 doesn't have much of a problem with intermod, although it does seem to have more birdies than my Radio Shack and Uniden scanners, especially on VHF low band. However, the birdie problem is minor considering the HS 200's excellent sensitivity and audio.

Well some of us have Never come across a real Leaky Cable TV
system. I think those are in the Minority so to make a Blanket
statement that they "ALL do" is just as Worng as saying saying
that "NONE do"!
I have never picked up any leakage in my area. Althouhg
realisticky I haven't really spend ALL day and Night looking for
it. Listening to TV sound alone is Terminaly Stupid to me.
IT is a VISUAL media!!!!

ScanStar's audio recorder not only records the audio to the hard drive it displays the active frequency and talkgroup. So rather than leaving the radio on one frequency or talkgroup, the radio can be scanning away just as if I were sitting there and all the data gets logged as part of the audio file. On playback you see time, data, talkgroup, frequency, etc. It is fully synchronized with the logging that scanstar is doing in the background like hit counter, last heard time/date, etc, so even after you delete the audio file you still have all the data 'hit' data logged in a separate place.

I didn't see the audio record function in Winscan. Did I miss something?

My real point is that I expect software to "multiply" my scanning experience, not just speed up what I can do with my fingers. I'm not knocking Winscan. It think it is a great program for the 895/245. I just needed something to support all my other computer controlled radios. Scanstar will soon have Pro-92 and BC245 support also.

I have NEVER heard of an honest citizen being cited for having a scanner
in their car. With all of the real crime on the streets do you think
that the police really give a damn if you listen to your scanner while
on vacation in your car? While it may be unlawful to have a scanner in
your car in some states, the law is rarely (if ever enforced). Now, if
you're planning to rob a bank and use your scanner to avoid
apprehension, that's another story.

Boy, is this ever the pot calling the kettle black!

Looking back over the past few years on this newsgroup , what would you guess
your ratio of useful, on-topic posts to John Mackey flames would be. Pretty
small fraction, I do reckon.

You obviously have not dealt with some cops in Philladelphia!

While it is true that 99% of the time, laws like this are just to
'tack on' an offense, the risk is there. And I HAVE run into these
kinds of cops, who are thankfully in the VERY SMALL MINORITY!
(And you know what? It's usually higher up the chain! The cop
on the front line isn't out to hassle you, unless you hassle him first!)

Just like gun laws. I've been licensed to carry since 1977. Know
how many times I've had to show a permit since to an officer?
ZERO! Even when I had my revolver 'fall out' onto the floor at a
very embarassing moment (long story). Or when I got grabbed
on the "T" in Boston when my sweater 'pulled up' exposing things
better left hidden. Or when I 'pulled' on a situation that had
escalated and got a small town department involved up to the
chief. ("Got a permit?" "Yep, want to see it?" "Naw!") It's
attitude and presentation 99% of the time. But there's always
the possibility of that 'other' 1%.

There HAVE been cases of this happening with scanners,
although rare. And while I suspect there may have been at least a
'degree' of 'attitude that contributed to the issue, the bottom line is
that it HAS happened.

Hello,

I'm building a new house and want to know what I can do for an external antenna. I have a PRO-91 and am currently using an indoor coax with 36" stripped at the end. It works ok, but would like something to run outside for a clearer signal.

First, if I run coax through my wall and up to the attic and out to an antenna, will that length of coax reduce the signal strength anyway? Second, do I need to ground that antenna? (probably instructions will have that info) Third, what antenna would be good for 29-900mhz, I listen to everything, but mainly trunked freqs.

Thanks,
Mike

It gets even "funnier;' when a scanner is mistaken for a handgun. Happened to a lad I knew in Irvine, son of an IDEC club member there. The local paper reported it under the headline "Dangerous Radio."

Yes. It does what you mentioned above.

> My real point is that I expect software to "multiply" my scanning
> experience, not just speed up what I can do with my fingers. I'm not
> knocking Winscan.

I didn't take it as "knocking WinScan," but rather, as a testimonial
against computer-controlled packages (you mentioned just the virtual
interface feature but I wanted to point out all the "extras" such
packages come with typically providing MANY more features than the
stock radio is capable of). Besides, I was just ribbing you as well...

> I just needed something to support all my other computer controlled radios.
> Scanstar will soon have Pro-92 and BC245 support also.

That is definitely a concern for those who own multiple
computer-controlled
radios and don't want to put an arm and a leg for a separate program to
run each of them.

I did and the original poster finally replied AND discussed his opinion of this antenna compared to others. The rest of the posts in-between were like yours, whining with no information.

>From this view it appears your motive was to trash the guy, trash
>the product, and hope you could pick a fight. Sheesh.

Where did I trash the guy? Yep, trashed the product, for $18 you aren't getting much with this antenna, I have two of them, and have compared them with a discone, channelmaster 4095A, Cushcraft AR270, Diamond 2000, 5 element quad and a couple of home built antennas. I also used a MFJ 259 analyzer to peak at the resonant points and impedance of these antennas. Yeah ok you said it, its trash. What do you have to add??? Nothing so far but to whine, must be catching.

Outside is almost always better.

> First, if I run coax through my wall and up to the attic and out to an
> antenna, will that length of coax reduce the signal strength anyway?

If you use some decent coax like the double shielded rg6u you gain much more
from an outside antenna then you will lose from the coax.

> Second, do I need to ground that antenna? (probably instructions will
have
> that info)

Yes and yes. Do a WWW search for antenna grounding.

>Third, what antenna would be good for 29-900mhz, I listen to
> everything, but mainly trunked freqs.

And the can of worms opens. A lot depends on how far away the signals are
you want to hear. The simplest and broadest coverage antenna would be the
discone. The negative thing you will hear about it is it has no gain. If you
are interested in local stuff and reception is so so without the outdoor
antenna the discone would probably fit your bill. Seeing you are using a HT
you run the risk of overloading the front end with too much signal. Hope
this gets you started.

Make sure you're clear of deed restrictions, etc. I was forced to an
in-attic antenna which actually worked really well.

> First, if I run coax through my wall and up to the attic and out to an
> antenna, will that length of coax reduce the signal strength anyway?
> Second, do I need to ground that antenna? (probably instructions will have
> that info) Third, what antenna would be good for 29-900mhz, I listen to

The length is a factor, and, as important, the quality and number of
connections. You should ground it, or, just hope your lucky and your
radio isn't smoking one day when you get home.

Suggest you read this:

http://www.strongsignals.net/htm/rev_bant.htm

and this:

http://www.strongsignals.net/htm/co-ax.htm

I had an in-attic Radio Shack 20-013 with high quality cable and no
intermediat connections (straight from antenna to radio) and it worked
great!

Easy there Tom. Turn the flame down there cowboy. I made that statement because I HAVE spent all day looking for cable leakage. I did that because the FCC mandates that every cable operator do so. Any yes, ALL cable systems radiate. That's not to say that every inch of cable leaks but EVERY SINGLE cable system using copper cable leaks. You find me an operator with no leakeage and we'll know who the worst liar is.

Many cable operators are dilligent about CLI and many are not. Anyway, I don't want to get off topic but I wanted to make sure you didn't get so upset that you had a stroke over the whole thing.

If you wish to further discuss that topic, post it to alt.cable-tv and cc: my e-mail.

This unit is in excellent condition and has the newest software to allow the reception of any FM near field signal between 30 Mhz and 2 Ghz. The frequency will be displayed and the sound will be heard including cellular transmissions for the signal that is received.

Also displays CTCSS, DCS, LTR and DTMF information on the LCD screen. Frequency blocks can be included or excluded. Up to 1,000 individual frequencies can be locked out. In VFO mode an exact frequency can be monitored. In SWEEP mode the entire covered frequency spectrum is searched in less than 1 second.

Comes with the optional case, telescopic BNC antenna, AC adaptor/charger for the internal NiCad battery, computer RS232 cable and the manual.

Shipping is included in the United States. Payment is via a postal money order. Trades are possible for high end shortwave or communications receivers value for value.

Press the lower frequency of your search, then LIMIT.
Press the upper frequency of your search, then LIMIT
Press SEARCH to start.

e.g. to search from 151 to 153 Mhz:

151 LIMIT 153 LIMIT SEARCH

Sam Hall wrote:

I would suggest that if you find something incorrect, notify the folks at Bearcat and tell them of the incorrect freq. With over 4M freq I am sure that some are missed. It is up to the users to help keep it correct.

All this because I list a FA. Too Many Radios thanx for taking my back.To the rest of you, I have one of these ground plane antennas on my roof and like it better than the discone, but thats my opinion and since opinions are like assholes everyone has one. As for the Antenna, It is a discontinued RS 20-014 that had originally sold for $39.97 + tax in (I believe) the 1998/99 catalog. Anyway you look at it, for $18 or $40, it is still a great buy for a new ground plane in the box. If you can find one for less, or build one or even if Height and low loss coax will do it, go for it, I'm happy for you. Boy, some of you need to get a life!

6919. Re: Scanner use in car

Newsgroup: rec.radio.scanner
Date: 2000-03-31 00:00:00 UTC
From: Mike Yetsko <joe@user.com>
Message-ID: <OL6F4.9474$64.304478@newsread2.prod.itd.earthlink.net>
Source record: 91046

In 1977 I was a Radio Shack manager in a small country store in
PA. We went to Philladelphia for our 'annual meeting' for the
region, and were SPECIFICALLY ADVISED IN WRITING to make
sure we didn't have scanners in our cars.

Since I wasn't a manager in Philladelphia, I cannot vouch for it
first hand, but the managers in the city stores had been harrassed
by the city for selling radios that could receive police frequencies.
So much so that Radio Shack actually stopped the automatic
'drop shipment' of certain radios to stores in the city that were
portable or mobile.

About 1994 or so, there was a case, written up in the 'sidebars' of
a NUMBER of magazines about an 'incident' on a NYS Interstate
where a HAM radio set was confiscated by a trooper because it
went 'out of band' and received his transmissions. This led to
the 'clarification' of the NYS anti-scanner laws so that HAM radio
gear, including scanners, were NOT in violation if they were not
programmed for police frequencies. I'm sure if you look, you can
even find a reference to the QST article on this.

I used to live in Long Island, and actually found the police there
and through NYC to be very laid back with regard to scanner use.
And even firearms. Something that seems to be totally different
in areas north and west of the 'the city'.

While I agree there is a lot of 'urban legend' that has been flying
around with regard to this, there ARE cases of it happening.

But I suspect that you're one of these people that the only proof you'll
accept is when it happens to you and they you'll scream ignorance.

6920. Re: CHP Freqs for Wrightwood area

Newsgroup: rec.radio.scanner
Date: 2000-03-31 00:00:00 UTC
From: Jon Usle <lts839omni_w@earthlink.net>
Message-ID: <38E4FAED.16EABEBD@earthlink.net>
Source record: 91047

The Wrightwood area sits on a border of 3 CHP areas.

San Bernardino 39.26 repeater, cover both sides of conversation
Victorville 42.56R / 42.72
Antelope Valley 42.42 / 42.84

Antelope Valley covers the area of Wrightwood, from the county line
west. And all of the ski resorts.

Victorville covers all of Hwy 2 east of the Los Angeles county line, Hwy
138 from 3 miles east of Hwy 2 to Los Angeles county line. Also Lone
Pine Canyon Road from the city limits west thru town.

San Bernardino covers the routes to Wrightwood, I-15 north to Oak Hills,
Hwy 138 to Hwy 2, Lone Pine Canyon Rd to WW city limits..

Big Bear, Arrowhead, Running Springs, Twin Peaks are covered by the
Arrowhead CHP office.

Hi, my name is Oscar and I am very interested in getting a scanner. I don't know much about what features I should look for but I'm undecided between the Uniden BCT7 or BCT 12 and the Radioshack PRO 2066. I beleive the advantage to the Uniden is that it has the Highway Patrol warning and it's even preprogammed, but the radioshack has trunking capability which migh outweigh the uniden advantages. What do you guys think?

Well, this is as much "proof" as you'll be able to get over the
internet, but it'll have to do...

http://www.arrl.org/arrlletter/96/960712/

The story of Greg Godsey and his HTX-202 (which cannot receive police
bands) and what happened to him. Summary.

http://www.arrl.org/arrlletter/99/0226/

Charges *finally* dismissed against Godsey. Family sprung $3k to
recover HTX-202 and get charges dropped. (note time length here!)

http://www.arrl.org/arrlletter/97/971003/

Joseph Osborn recovers his radios after having to go to court. As of
writing, still hadn't received everything required and was considering
filing a contempt charge. Florida law was on his side -- officer was
plain wrong.

http://www.arrl.org/arrlletter/96/960802/

David Schaefer, 14 at the time, is followed for 5 blocks by a KY cop
then has his scanner confiscated. Fortunately, Covington assistant
police chief is also a ham, and David got his scanner back.
Had he not been a ham, he'd've been screwed. David was bicycle
mobile.

I got these by searching the ARRL web site, restricting to the ARRL
Letter -- a web newsletter -- and searching on the word "confiscated."

Hopefully this is concrete enough for you...

Eric

Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.amateur.antenna

Just when you thought it was safe to back to the rig...

God damn those CTIA jerks! They are *again* trying to
make it illegal to perform any surgery on your rig or
listen to "unauthorized" communication, which can mean
anything.

This is the same old crap they've tried before, but they
only have to succeed once... anyone remember ECPA?

(I seem to recall that CTIA had a lot of member companies
in Ft. Worth. I wonder how many of those slimy lawyers were
rescued or treated by ARES and SKYWARN volunteers this week?)

See
http://www.strongsignals.net/
http://www.wow-com.com/news/ctiapress/body.cfm?record_id=854

Oh, and, a final flame... if you are one of the scannists
who keep asking and listening to and talking about cell calls
and cordless calls... YOU ARE PART OF THE PROBLEM, NOT PART OF
THE SOLUTION! Please stop doing that so we can continue to
have legal scanners and HTs that aren't potted into resin bricks.

Grrr...

That is why I have seen this radio for sale from the same guy for at least 8 months on and off. Paid $75 for mine 6 months ago.

Hi,
Some cell phones are able to be converted to act as scanners. I wonder if
you can set a 900 mhz phone in test mode and have scan its channels for
activity?

Ok, I've tapped the discriminator on my Pro-2042... Now what?
:)

I've heard that I can decode MTD and Pagers with this tap... would it help me with ACARS decoding?

How do I hook it up to my computer, and what software do I need?

Thanks a Heap!

Andrew

Also look at the Monitoring Times & Popular
Communications websites, and hit the links for
their utility columns - Utility World in MT, and
Communications Confidential in PopComm. There's
a lot of info for you there.

I live in the NY area, and I've heard 6676 many times.
That's the nature of shortwave - there's lots of good
stuff to listen to from all over the world.

This guy must be legitimate if he knows how to spell surveillance correctly.
So here is what he should do:
Do not use any receivers that have a local oscillator (superhet) or a regenerative design.
Anyone can easily sniff out your operating frequency.
Use a receiver that has individually tuned RF gain stages. This technique will also eliminate all intermod
problems if designed correctly. Several design examples are available from 1930's literature.
Alternately, design a superhet that has an IF frequency at a home-made oddball frequency, and retune it
to change the IF frequency every 30 minutes.

Additionally, if I was building a house and had the walls still open, I would consider fishing the standard
8 conductor (4 twisted pairs) of wire in every room leading to a central point, such as the basement.
Perhaps even a fiber optic link throughout the house. Then you can easily add speakers, intercoms,
telecommunications, whatever.

Two observations here:

1) How did you manage to get "cell" out of a 700a? Nice trick, considering
that the chips in these radios are not even capable of covering the cellular
frequencies.

2) Your asking price is much too high. This radio typically sells new for
$149.99. Local pawn shops have an abundance of them at $60-70 each.

Well, we are just now getting fiber-optic. Even in a new sub-division,
we got the regular ole cable line. They are currently pulling the
fiber
optics through, and hopefully, decent internet connecctions. Not
everyone
is in the high-class section, yet. :)

I don't think they would be stupid not to encrypt them communications. If
communication where to be so called "sensitive",
Kinda stupid don' t you think.

Time you find a new hobby.

Regards.

I think you're right on the mark, John!
Those that already have the EXPENSIVE equipment are already
pirating on these bands. The other's aren't so willing to
shell out the bucks in the name of pirating fun.
Not a whole lot is going to change, IMHO!
